

Pimpri Chinchwad Education Trust's
PIMPRI CHINCHWAD COLLEGE OF ENGINEERING
SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044
(An Autonomous Institute Approved by AICTE and Affiliated to SPPU, Pune)

Curriculum Structure and Syllabus
of
Second Year B. Tech. Mechanical Engineering
(Regulation 2023)

Effective from Academic Year 2024-25

Institute Vision

To be one of the top 100 Engineering Institutes of India in coming five years by offering exemplarily Ethical, Sustainable and Value Added Quality Education through a matching ecosystem for building successful careers.

Institute Mission

1. Serving the needs of the society at large through establishment of a state-of-art Engineering Institute.
2. Imparting right Attitude, Skills, Knowledge for self-sustenance through Quality Education.
3. Creating globally competent and Sensible engineers, researchers and entrepreneurs with an ability to think and act independently in demanding situations.

EOMS Policy

“We at PCCOE are committed to offer exemplarily Ethical, Sustainable and Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders.

We shall strive for technical development of students by creating globally competent and sensible engineers, researchers and entrepreneurs through Quality Education.

We are committed for Institute’s social responsibilities and managing Intellectual property.

We shall achieve this by establishing and strengthening state-of-the-art Engineering Institute through continual improvement in effective implementation of Educational Organizations Management Systems (EOMS).”

Course Approval Summary

Board of Studies - Department of Mechanical Engineering

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS chairman
1.	Engineering Materials	BME23PC02	15	
2.	Strength of Materials	BME23PC03	16	
3.	Material Testing Lab	BME23PC04	18	
4.	Strength of Materials Lab	BME23PC05	21	
5.	Community Engagement	BME23EL01	55	
6.	Fluid Mechanics	BME24PC06	57	
7.	Theory of Machines	BME24PC07	59	
8.	Fluid Mechanics Lab	BME24PC08	61	
9.	Theory of Machines Lab	BME24PC09	64	
10.	Geometric Dimensioning & Tolerancing	BME24VS03	89	
11.	Computer Aided Machine Drawing	BME24VS04	91

Prior knowledge of Broad Classification of Materials is essential							
Course Objectives:							
<ol style="list-style-type: none"> To relate structure and properties of materials. To comprehend effect of thermomechanical processing on structure and properties. To explore capabilities of Powder Metallurgy as a manufacturing process for advanced materials and application. 							
Course Outcomes:							
The Students will be able to,							
<ol style="list-style-type: none"> Correlate structure and properties of metals, polymers and ceramics. Select appropriate ferrous alloy for given application. Select appropriate non-ferrous alloy for given application. Select appropriate heat treatment for given application. 							
Detailed Syllabus:							
Unit	Description						Duration (H)
1.	Introduction to materials Classification of materials, structure of metals, polymers and ceramics, crystal imperfection, structure & property relationship, Introduction to composites and their properties.						6
2.	Ferrous metals and alloys Iron-iron carbide equilibrium diagram, critical temperatures, solidification and microstructure of slowly cooled steels, application of lever rule, structure & property relationship, classification and application of steels. Cast Irons: Classification, Manufacturing, Composition, Properties and Applications of cast iron, effect of various parameters on structure and properties of cast irons. Classification of alloy steels and effect of alloying elements. Specifications of ferrous alloys (IS and Unified Standard).						8
3.	Nonferrous metals and alloys Classification of nonferrous metals. Importance of nonferrous metals in engineering applications & compositions, study of different mechanical properties; Cu & Cu based alloys, Al and Al based alloys, Ni and Ni based alloys, Co and Co based alloys, Titanium & its alloys, Tin & Lead base alloys, Bearing materials: important properties & applications. Specifications of non-ferrous alloys (IS and Unified Standard).						8
4.	4. Heat treatment cycle and their applications Heat treatment of steels: Transformation product of austenite with non-equilibrium cooling, TTT and CCT diagrams, Annealing, Normalizing, Hardening & Tempering, Subzero treatment. Age hardening for nonferrous alloys, Defects due to heat treatment and remedial measures. Surface hardening heat treatments.						8

<p>Prior knowledge of</p> <ol style="list-style-type: none"> Fundamentals of engineering mechanics Analysis of forces and moments Laws of motion, kinetics, kinematics Centre of gravity and Moment of inertia is essential. 							
<p>Course Objectives:</p> <p>This course aims at enabling students,</p> <ol style="list-style-type: none"> To establish an understanding of the fundamental concepts of mechanics of deformable solids, material behavior and basic mechanical principles underlying modern approaches for design of various types of structural members subjected to axial load, torsion and bending. To utilize the concepts of Strength of material for solving engineering problems. 							
<p>Course Outcomes:</p> <p>After learning the course, the students should be able to:</p> <ol style="list-style-type: none"> Understand and distinguish the Mechanical behavior of ferrous and nonferrous materials by determining the stresses, strains, deflections produced by the loads. Construct shear force and bending moment variation of the beam across the length. Evaluate stresses in beams for end conditions, load conditions and materials. Calculate stresses in beams for various end conditions, load conditions, and materials. Estimate the shaft dimensions subjected to torque and column subjected to axial loading. Determine the slope & deflection of the beam for various loading conditions. Compute the torsion for the circular shaft and find the crippling load and equivalent length of the column. Understand principal stresses and able to apply the theories of failure. 							
Detailed Syllabus:							
Unit	Description						Duration [Hrs]
1.	<p>Stress and Deformation of Solids: Stress, strain, Hooke's law, Poisson's ratio, Stress-strain diagram for brittle and ductile materials, Modulus of Elasticity, Modulus of Rigidity, Bulk Modulus. Interrelation between elastic constants, Deformation of simple and compound bars. Temperature stresses in simple members. Strain energy due to axial load (gradual, sudden and impact).</p>						8
2.	<p>Principal planes and stresses: Principal planes and stresses on oblique planes, expression for principal stresses & maximum shear stress, orientation of principal planes and planes of maximum shear. Graphical solution using Mohr's circle. Theories of elastic failure: Maximum principal stress theory, maximum shear stress theory, maximum distortion energy theory their applications and limitations.</p>						8
3.	<p>Shear Force and Bending Moment Diagrams: [Tutorial treatment] Shear force and bending moment diagrams for statically determinate beam due to concentrated load, uniformly distributed load, uniformly varying load and couple, Relationship between rate of loading, shear force and bending moment. Maximum bending moment and position of points of contra flexure.</p>						7

4.	Stresses in Beams: Bending stresses: Theory of simple bending: Flexural formula, bending stress distribution diagrams for common cross sections (rectangular, I,T,C), moment of resistance and section modulus. Shear stresses: Shear stress distribution in beams, shear stress distribution diagrams for common symmetrical sections, maximum and average shear stresses.	8
5.	Slope and deflection of beams: [Tutorial treatment] Relation between bending moment and slope, slope and deflection of determinate beams for standard cases with double integration method (Macaulay's method).	7
6.	Torsion: Stresses, strain and deformations in determinate shafts of solid and hollow subjected to twisting moment, torsion equation. Buckling of columns: Theory of columns – Long column and short column - Euler's formula – Rankine's formula	7

Prior knowledge of Type of materials, Basic structure and properties of materials is essential.							
Course Objectives: Students are expected to study, 1. Significance of various material characterization techniques. 2. The use of various material testing standards and methods.							
Course Outcomes: After completion of this course, the students will be able to, 1. Perform destructive testing referring appropriate material testing standards and analyze the data. 2. Inspection and analysis for defects. 3. Prepare specimen, observe and analyze microstructure. 4. Measure and analyze effect of heat treatment on properties of materials. 5. Perform powder characterization. 6. Select appropriate material for part under consideration							
Detailed Syllabus							
Expt. No.	Suggested List of Experiments						Duration Hrs
1	Hardness test i. Study working principles and test standards of Brinell, Poldi, Vickers and Rockwell hardness test etc. ii. Select appropriate hardness test for given materials based on capability of hardness test. iii. Prepare test specimens according to selected standards. iv. Perform hardness test by applying appropriate test standards and necessary safety precautions. v. Determine the hardness number of various materials and compare with available literature. vi. Compare given materials based on their hardness number and identify their applications. vii. Prepare a detailed report including error graphs and conclusions drawn.						6
2	Impact Test i. Study need, factors affecting impact strength, working principles and test standards of Izod and Charpy Impact test. ii. Prepare test specimens according to selected standards. iii. Perform Izod and Charpy impact test at different temperatures by applying appropriate test standard and necessary safety precautions. iv. Determine the impact toughness/dynamic toughness of mild steel, brass and aluminum. v. Compare given materials based on their toughness property at different temperatures and identify their applications.						4
3	Non-destructive testing of materials i. Study working principles and test standards of Dye penetrant, Magnaflux, Ultrasonic and Eddy current test. ii. Select appropriate non-destructive test (NDT) for given part based on capability of test. iii. Perform non-destructive test by applying appropriate test standard and necessary safety precautions. iv. Inspect the quality (presence of defect) of given material/part. v. Compare the various NDT methods.						4

4	Study of Microscopy Techniques i. Study working principle, construction, working and capabilities of optical microscope and electron microscopes. ii. Hands on practice of optical metallurgical microscope. iii. Demonstration of SEM and TEM through lab or industrial facility visit. iv. Review of literature on scanning electron microscopy and transmission electron microscopy.	8
5	Specimen preparation for microscopic study i. Understand the relevance of various steps involved in specimen preparation. ii. Prepare steel, cast iron, brass and aluminum etc. samples to study their microstructure. iii. Observe and analyze microstructure of prepared samples. iv. Study grain shape, size, and grain distribution, identify various phases and correlate the properties of prepared samples.	6
6	Microstructure observation and analysis of ferrous and non-ferrous materials. i. Observe grain shape, size, and grain distribution, identify various phases and predict the properties of various ferrous and non-ferrous alloys. ii. Analyze and compare microstructure of low carbon steel, medium carbon steel, high carbon steel, white cast iron, gray cast iron, nodular cast iron and mottled cast iron. iii. Analyze and compare microstructure of brass, bronze and nickel alloy. iv. Compare obtained microstructure with available literature.	6
7	Heat treatment of steel i. Study transformation of austenite to pearlite, bainite and martensite. ii. Study working principle, heat treatment standards and process of Annealing, Normalizing, Hardening and Tempering. iii. Perform annealing, normalizing, hardening and tempering by applying appropriate test standard and necessary safety precautions. v. Study the effect of annealing, normalizing, hardening and tempering on microstructure and hardness property of steel under various heat treatments by performing hardness test before and after heat treatment. v. Compare obtained results with available literature.	8
8	Hardenability test i. Study concept of hardenability. ii. Understand the Jominy End Quench test standards and procedure. iii. Perform heat treatment on oil hardened non shrinking steel and high carbon high chromium steel, prepare specimen for hardness test (surface grinding), measure hardness. Applying appropriate standard and necessary safety precautions during each stage of test. iv. Obtain hardness vs distance from quench end plot, analyze the data and determine hardenability of test specimens. v. Compare the hardenability behavior of given test specimens with available literature.	6
9	Powder Metallurgy i. Introduction to powder metallurgy technic. ii. Study various powder characterization techniques. iii. Prepare or collect powder sample for characterization (Ball Milling) iv. Determine particle size, size distribution, apparent density, tap density of powder. v. Correlate these properties with forming and sintering characteristics.	6
10	Selection of material for application under consideration i. Define or choose application or component and identify essential and desirable properties. ii. Calculation of performance index iii. Use of Ashby chart	8

	iv. Preparation of material comparison matrix consisting of mechanical, physical, chemical, magnetic, electric properties, cost, manufacturability, recyclability, environmental effects etc.	
	v. Suggest the most suitable material using it's IS or Unified designation.

	Theory	Practical	Tutorial	TW	OR	PR	Total
1	-	2	-	-	50	-	50
Prior knowledge of a. Type of materials b. properties of materials is essential.							
Course Objectives: 1. To impart practical skills in investigating the mechanical behavior of materials. 2. To demonstrate the importance of testing standards in the determination of mechanical properties							
Course Outcomes: After completion of this course, the students will be able to, 1. Examine the mechanical behavior of ferrous materials. 2. Examine the mechanical behavior of non-ferrous materials (plastics / composites). 3. Perform torsion test on long rods to verify torsional formula.							
Detailed Syllabus							
Expt. No.	Suggested List of Experiments						
	Part A - Practical:						
1	Tension test on ductile material for determining Young's modulus of materials using Universal Testing Machine						
2	Compression test on Brittle material materials using Universal Testing Machine						
3	Shear test on ductile material materials using Universal Testing Machine						
4	Bending of Simple supported beam/Cantilever [Bending (flexural) formula]						
5	Torsion of circular bar to find out modulus of rigidity.						
6	Tension test on Plastic/Composite [Tensile Testing m/c (low load capacity)]						
	Part B- Assignment						
7	Interpretation of any two cases of structural analysis identified from literature

Prior knowledge of							
1. Univariate Calculus							
2. Multivariate Calculus is essential.							
Course Objectives:							
After completion of the course, students will have adequate background, conceptual clarity and knowledge of mathematical principles related to:							
1. Statistical techniques and Probability theory for Data Analysis.							
2. Partial differential equations applied to mechanical engineering problems such as mechanical vibrations and heat transfer.							
3. Laplace Transform and Inverse Laplace Transform applied to solve linear differential equations.							
Course Outcomes:							
After learning the course, the students should be able to:							
1. Apply descriptive statistical techniques for measures of variability of numerical data, Curve fitting, Correlation and Regression.							
2. Make predictions for the numerical data using probability theory and hypothesis testing.							
3. Apply variable separation method to solve wave, transport, one and two-dimensional heat flow equations.							
4. Solve the mass spring system and similar problems using Laplace and Inverse Laplace Transform.							
Detailed Syllabus:							
Unit	Description						Duration [Hrs]
I	Statistics: Measures of Variability: Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Curve fitting, Correlation and Regression.						7
II	Probability Distributions: Probability, Theorems on Probability, Mathematical Expectation, Binomial, Poisson, and Normal Distributions. Hypothesis Test: z-test, t-test, Chi-Square test, ANOVA Test.						8
III	Applications of Partial Differential Equations: Solution to One dimensional Wave, Heat and Transport equation, Two-dimensional heat flow equation using Method of separation of variables.						7
IV	Laplace Transform: Introduction, Laplace Transform of some standard and special functions, Region of convergence and Properties, properties and theorems of Laplace Transformation. Inverse Laplace Transform, Application of Laplace Transform to solve LDE.						8

Pre-requisite: Basics of Human Anatomy and physiology Basics of Electronics Engineering										
Objectives:										
<ol style="list-style-type: none"> 1. To introduce biological engineering principles, procedures needed to solve real-world problems. 2. To provide an overview of human anatomy and physiology in order to support biomedical engineering solutions. 3. To introduce biomedical sensors, signal processing and diagnostic systems. 4. To provide a basic knowledge of the applications of biological systems in relevant industries. 										
Outcomes:										
After completing the course the students should be able :										
<ol style="list-style-type: none"> 1. To understand basics of human physiological system and its cell functioning 2. To understand human immune system and significance of microbiology 3. To map role of biology in designing industrial applications 4. To understand biomedical sensors, its interfacing and related to measurement systems. 										
Detailed Syllabus:										
Unit	Description									Duration (Hrs)
I	CELL PHYSIOLOGY : Introduction to the cell biology – Cell size and shape - Chemical composition - Classification of cell and its properties, Cell cycle; Cell signalling, Transport across cell membrane; Introduction to Human physiology – Circulatory system - Respiratory system - Excretory system - Nervous system.									08
II	IMMUNOLOGICAL SCIENCE: Immune system and its types; Functional properties of antibodies; Helper T cells and T cell activation; Importance of Microbiology.									07
III	BIOLOGY AND ITS INDUSTRIAL APPLICATION: Introduction : Bioreactors, biocontrol, bio filters, biopolymers, bioenergy, biomaterials, biochips, Nano-Biomolecules and its various types: Principles and Application of Biosensor; Basics of Biochips – Bio fertilizer – Bioinformatics – Bio fuel.									07

IV	INTRODUCTION TO BIOMEDICAL INSTRUMENTATION: Need and Challenges in measurement of the parameters in living systems, Source of bioelectric potential: Resting and action potential, propagation of action potential, depolarization and re-polarization. Introduction to few important bio-potential such as Electrocardiogram (ECG), Electroencephalogram (EEG) and Electromyogram (EMG).	08

Prior knowledge of Artificial Intelligence, Machine Learning is essential.

Course Objectives:

1. To understand the essentials of financial modelling
2. To learn to build a simple financial model.
3. To perform the analyses of financial models and Apply AI/ML methods for forecasting
4. To use AI enabled platforms for finance tasks
5. To learn feature engineering, EDA and understanding with regards to financial data.

Course Outcomes:

After learning the course, the students will be able to:

1. To learn the essentials of financial modelling.
2. To build financial models and perform the analysis.
3. To apply AI/ML methods for financial forecasting.
4. To use AI enabled tools and platforms for finance tasks.

Detailed Syllabus

Unit	Description	Duration (H)
I	<p>Financial Basics: Introduction to financial statements: The Accounting Equation, Balance Sheet, Income Statement, Cash Flow Statement.</p> <p>Excel Basics - Formatting, Reports and Charts, Introduction to the Excel Model – Functions and features, building a financial forecasting model using excel.</p>	7
II	<p>Financial Modelling and analysis: Introduction to financial modelling, Build an integrated financial statement model, modelling of sales, modelling of taxes and payments, modelling of payroll, modelling of external services, profit and loss analysis, cash flow analysis, debt modelling and its analysis, Equity modelling and analysis</p>	8
III	<p>AI for Finance: "Knowledge Brings Freedom" Introduction to AI, Need, Visualization, EDA, Pre-processing and Feature Engineering of Financial Data with Python. Introduction to Responsible AI in Finance. Financial forecasting – Case study: Stock data preparation–time series analysis: univariate or multivariate, tree-based machine learning techniques of stock prediction, stock price prediction using ANN/DNN/ LSTM. Case study: Predicting currency exchange rates with multi-layer perceptron OR Case study: Loan Approval Prediction using Gradient Boosting classifier</p>	8

IV	AI enabled tools for finance: Use cases for finance professionals for ChatGPT and AI-enabled tools - FinGPT, Use Case of Getting a Specific Accounting treatment using Prompt Strategy. Introducing ChatPDF and analyzing financial statement, Creating your own chatbot on accounting policies, Creating Sample Financial Models for decision making.	7

Prior knowledge of: Fundamentals of the Internet is essential.							
Course Objectives:							
<ol style="list-style-type: none"> To learn the concepts of cyber security for understanding and addressing digital threats effectively. To learn about legal frameworks governing information technology and cyber law. 							
Course Outcomes:							
After learning the course, the students will be able to:							
<ol style="list-style-type: none"> Explain the principles and necessity of cyber security Categorize various cyber threats, cybercrimes, and cyber legal frameworks. Apply cyber forensic techniques to identify criminal activities. Use preventative measures to stop social engineering scams. 							
Detailed Syllabus							
Unit	Description						Duration (Hrs)
1.	Introduction to Cyber Security Cyber Security – History of Internet– Impact of Internet; Reason for Cyber Crime – Need for Cyber Security; History of Cyber Crime, Cyber Security Concepts: Introduction to cyber security, Types of cyber security, Information Assurance Fundamentals, Attacker Techniques and Motivations, Cyber security Challenges, Incident response process, Security policy, Risk Analysis and Management, CIA Triad						8
2.	Cyber Crime and Law Cybercriminals – Classification of Cybercrimes – A Global Perspective on Cyber Crimes, Planning cyber-attacks by cybercriminals, Careers in Cyber Security. Cyber Laws—The Indian IT Act—Cyber Crime and Punishment. Types of Threats, Types of Hacker, Hacking and Cracking, Hacking: Ethical issues, Ethical Hacking.						8
3.	Cyber Forensics Introduction to Cyber Forensics: Cyber forensics investigation process, digital evidence, challenges in cyber forensics; Types of forensics, Anti- forensics practices, Anti-forensics detection techniques. Email Forensics: e-mail Protocols, email crimes, email forensics;						7
4.	Social Engineering Introduction of social engineering and cyber security, Evolution of Social Engineering, Social Engineering Ethics, Purpose , Prevention methods, Insider attacks, defining social engineering-categories, Phases, attack spiral model, Attack Vendors-social approach, socio-technical approach. Identity Theft, Preventing Insider Threats,						7

Prior Knowledge: Nil							
Course Objectives: This course aims to enable students to get acquainted with, 1. Knowledge of Neural Networks and its use for controlling real-time systems. 2. Knowledge about fuzzy set theory to solve various engineering problems.							
Course Outcomes: After learning the course, the students will be able to: 1. Compute feedforward Artificial Neural Network output using basic concepts related to Artificial Neural Network. 2. Apply backpropagation and optimizer algorithms to update weights of Neural Networks and application-based problem-solving. 3. Find fuzzification and defuzzification of crisp function using basic Fuzzy set theory concepts. 4. Apply a fuzzy logic control system to handle uncertainty and some engineering problems.							
Detailed Syllabus							
Unit	Description						Duration [Hrs]
I	Architecture of Neural Network: Introduction, Biological Neural Network, Artificial Neural Network The architecture of Artificial Neural Networks- Bias, Activation Function, Learning Methods, Learning rules, Types of Neural Networks: Single-layer, multi-layer, feed-forward, and recurrent neural networks.						7
II	Neural Networks For Control: Loss function, Weight initialization, Optimizers algorithms, Backpropagation Algorithm, Associative Memory Networks and their types, Discrete-time hop field networks						8
III	Fundamental of Fuzzy Logic: Fundamental of Fuzzy Logic: Classical sets, Fuzzy Sets, Membership function, Cardinality of fuzzy set, Fuzzy complement, Fuzzy Composition, properties and operation on Fuzzy sets, Fuzzy Relation, Fuzzification, Defuzzification						7
IV	Fuzzy Logic Control: Fuzzy Rule, Decision-making Logic, Linguistic variables Fuzzy Inference System: Mamdani FIS, Sugeno FIS Design of fuzzy controller, fuzzy optimization, applications of FIS to some real-life problem						8

Program:	B. Tech. (Civil Engineering)			Semester :	III		
Course:	Total Quality Management (OE DS offered by Civil Engg)			Code:	BCI23OE02		
Credits	Teaching Scheme (Hrs/Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50
Prior Knowledge: Basic definitions of Quality and importance of Quality in industry for safety and durability.							
Course Objectives: After Completing this course, student will have adequate background : 1. To understand the importance of Quality in construction. 2. To understand the need of Total Quality management & its tools. To understand role of ISO in quality management.							
Course Outcomes: After learning the course, the students should be able to: 1. Articulate quality and quality ideas as presented by many gurus and philosophers after learning. 2. Illustrate different quality control tools. 3. Apply ISO concepts and the cost of quality to quality assurance. 4. Analyze various techniques of TQM.							
Detailed Syllabus							
Unit	Description						Duration (H)
1	Unit I: Quality in Construction a) Quality – Various definitions and interpretation. Importance of quality on a project in the context of global challenges, Factors affecting quality, Reasons for poor quality & measures to overcome, Contribution of various Quality Gurus (Juran, Deming, Crosby, Ishikawa), "Knowledge Brings Freedom" b) Evolution of TQM- QC, TQC, QA, QMS, TQM.						7
2	Unit II: TQM, Six Sigma and QC tools a) TQM – Necessity, advantages, Quality Function Deployment (QFD), b) Six sigma – Importance, levels, Application of 6 Sigma, c) Implementation of 7 QC tools through case study.						8
3	Unit III: Cost of Quality and ISO a) Categories of cost of Quality, b) Study of ISO 9001 principles. Quality manual – Importance, contents, documentation, Corrective and Preventive actions, Conformity and NC reports.						7
4	Unit IV: Techniques in TQM Implementation a) Benchmarking in TQM, Kaizen in TQM, b) '5-S' techniques, Zero Defects, c) Quality Circle Concept and applications through Quality Circle Formation.						8
Total						30	

Text Books:

2. Management –Principal, process and practices by Bhat – Oxford University Press.(2008)
3. Financial management by Shrivastava- Oxford University Press (6th Edition 2022)
4. Management Information Systems – Gordon B. Davis, Margrethe H. Olson – Tata McGraw Hill Publ. Co. (2022)
5. Total Project Management –The Indian Context – P.K.Joy Macmillan India Ltd.

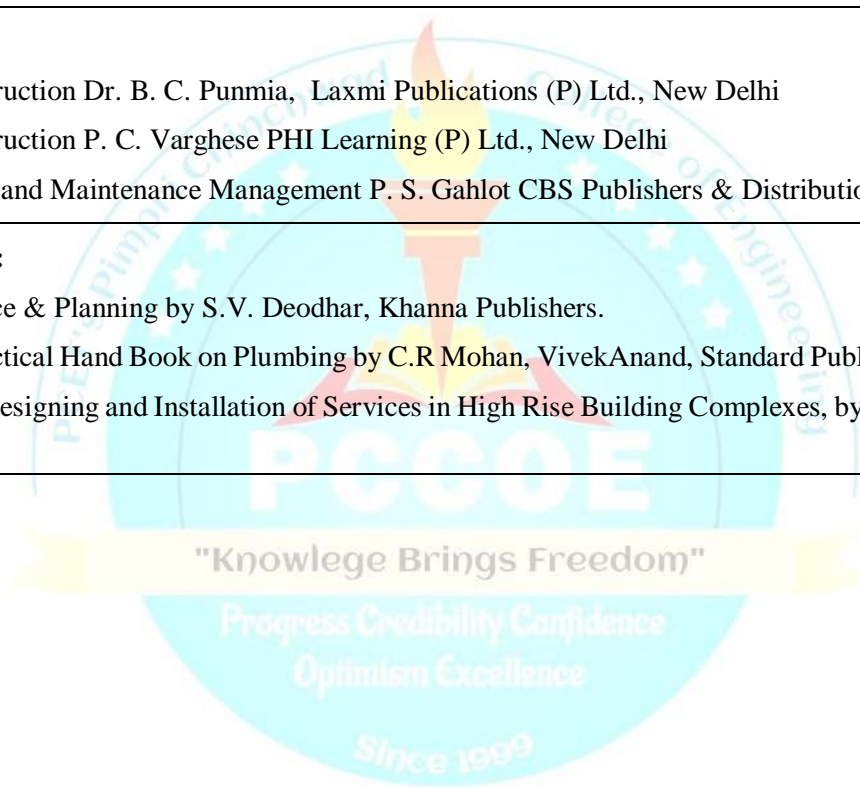

Program:	B. Tech. (Mechanical)			Semester:	III		
Course:	Building Services and Maintenance (OE DS offered by Civil Engg.)			Code:	BCI23OE02		
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50
Prior Knowledge: NA							
Course Objectives: This course aims at enabling students, <ol style="list-style-type: none"> To impart knowledge about the building services To examine the purpose and type of building maintenance. 							
Course Outcomes: After learning the course, the students should be able to: <ol style="list-style-type: none"> Understand different building services provisions. Interpret the fundamental concepts relevant to functional requirement of building. Relate the knowledge of Acoustic and Fire Protection. Choose diverse maintenance methodologies applicable to building and infrastructure services. 							
Detailed Syllabus							
Unit	Description "Knowledge Brings Freedom"						Duration (H)
1	Introduction to Building Services: Definitions, Objective and uses of services, different types of building, Classification of based on Occupancy, FSI, Carpet area, built-up area, Standard of Accommodation, Classification of building services, Types of services and selection of appropriate services for given project, case studies.						7
2	Escalator and Plumbing- Classification of different types of escalators, Lift codes and Rules, Design Features of Escalator, Plumbing- Common Sanitary Fixtures, Layout of Sanitary Fixtures, Water Pipe Sizing in Buildings, Building Services Detailing, Rain Water Harvesting, Sanitation in buildings.						8
3	Acoustics and Ventilation- Material properties, acoustical design of assembly halls and buildings, noise and its control, measuring equipment, Ventilation- Ventilation systems, health and comfort ventilation, Fire protection and National Building Codes 2016- requirements, equipment and their applications, security systems.						8
4	Building Maintenance: Role of maintenance in durability and serviceability of structures, Economic aspects of maintenance, Different types of maintenance and audits process. Infrastructures services: Different types of structures, infrastructure services, case studies.						7
Total						30	

Text Books:

Prior knowledge of basics Mathematics is essential							
Course Objectives:							
<ol style="list-style-type: none"> 1. To make students understand the fundamental concepts of database management. 2. To provide a foundation in database concepts. 3. To make students familiar with building database design. 4. To make students understand SQL queries and concepts. 							
Course Outcomes:							
After learning the course, the students will be able to:							
<ol style="list-style-type: none"> 1. Understand the fundamental concepts of database management systems. 2. Design E-R Model for given requirements and convert the same into database tables. 3. Design schema in appropriate normal form considering requirements. 4. Use SQL to write queries for given requirements. 							
Detailed Syllabus							
Unit	Description						Duration (H)
I	Introduction to Database Management Systems, Purpose of Database Systems, Database-System Applications, View of Data, Database System Structure.						6
II	Data Models, Database Design, Entity Relationship Model, ER Diagram, Extended ER diagram, converting E-R and Extended ER diagram into tables.						8
III	Relational Model: Basic concepts, CODD's Rules, Relational Integrity: Domain, Referential Integrities Database Design: Features of Good Relational Designs, Normalization, Atomic Domains, and First Normal Form, 2NF, 3NF, BCNF.						8
IV	SQL Language commands DDL, DML, DCL SQL: Characteristics and advantages, SQL Data Types, SQL Operators, Tables: Creating, Modifying, Deleting, Updating, DML Queries: SELECT Query and clauses, SQL - Ordering of Tuples, Aggregate Functions, SQL Functions, Sub queries						8
Total						30

Prior knowledge of problem-solving skills is essential.							
Course Objectives:							
<ol style="list-style-type: none"> 1. To introduce the fundamental phases of the Software Development Life-cycle (SDLC). 2. To make students understand the methods for capturing, specifying, and analyzing software requirements. 3. To make students understand the concept of UML Diagrams for software project development. 4. To provide the fundamental understanding of the agile process model. 							
Course Outcomes:							
After learning the course, the students will be able to:							
<ol style="list-style-type: none"> 1. Compare and Select appropriate Software Development Life-cycle (SDLC) Process Model. 2. Comprehend methods for capturing, specifying, and analyzing software requirements. 3. Design UML Diagrams for software project development. 4. Comprehend the basics of agile process model for the development of software projects. 							
Detailed Syllabus							
Unit	Description						Duration (H)
I	Introduction to Software Engineering Definition of Software, Software Application Domains, Software engineering layers, Software engineering practice, The Essence of Practice, General Principles, Software Development Life Cycle (SDLC) Models: Waterfall Model, V Model, Incremental Process Model, Evolutionary Process Models, Unified Process, Phases of the Unified Process. Case Study: Safe Home						8
II	Requirements Analysis Requirement Engineering, Requirements engineering tasks, Establishing the Groundwork- Eliciting Requirements, Collaborative Requirements Gathering, Quality Function Deployment, Usage Scenarios, Elicitation Work Products, Developing use cases, Software requirements document. Case Study: Safe Home						7
III	Software Design & Modeling Concepts Design Concepts, Design Process and Design Quality, Design Models, Modeling Concepts and Diagrams, Introduction to UML, Use Case Diagrams, Class Diagrams, Activity Diagrams, Deployment Diagrams.						8

IV	Agile development Process Agile Process- Extreme Programming in agile development, Agile software development process Models, SCRUM – process flow, scrum roles, scrum cycle description, product backlog, sprint planning meeting, sprint backlog, sprint execution, daily scrum meeting.	7

Prior knowledge of Basic programming knowledge **is essential**

Course Objectives:

1. To explore Kotlin programming language features.
2. To familiarize with the concepts of Kotlin.
3. To get acquainted with Android features, networks, and data handling techniques.
4. To develop an Android app with testing.

Course Outcomes:

After learning the course, the students will be able to:

1. Explore object-oriented programming with Kotlin.
2. Illustrate the concept of Kotlin fundamentals
3. Apply the network handling and Android UI techniques.
4. Deploy the Android application with testing.

"Knowledge Brings Freedom"
Detailed Syllabus

Unit	Description	Duration (H)
I	Introduction to Kotlin programming language Introduction to Kotlin programming language, Setting up Android Studio development environment, Basics of Kotlin syntax and basic programming concepts, Variables, data types, and operators in Kotlin.	6
II	Kotlin fundamentals Conditional statements, Loops, Functions, parameters, Kotlin collections, Classes and objects, Properties, fields, and methods, Inheritance, polymorphism, and interfaces, Data classes and sealed classes.	9
III	Android architecture, Android UI and Networking Android Architecture, Activities and life cycle, Views, View groups, fragments and lifecycle, Working with RESTful APIs and JSON data, Using Retrofit and OkHttp for network communication, Implementing LiveData and ViewModel, Asynchronous programming.	9

IV	Android App Development and Testing Case study: Picture gallery, Developing an App, Unit testing and UI testing with Junit and Espresso, Preparing and publishing app to Google Play store	6

Prior knowledge : NIL							
Course Objectives: This course aims at enabling students :							
<ol style="list-style-type: none"> To help the students to gain understanding of various perspectives in the field of Strategic Management To enable the students to pursue the modern management practices in business. To provide the students an understanding about tools and techniques of economic principles in business management. 							
Course Outcomes:							
After learning the course, the students will be able to:							
<ol style="list-style-type: none"> Explain the concept of Management and Strategic Management processes through case studies. Illustrate the Management Trends and Practices implied in Global Work Culture. Identify the role of economic variables in business economy. Analyze the business expansion strategies abroad and key issues related to their operations. 							
Detailed Syllabus:							
Unit	Description						Duration [Hrs.]
I	Introduction to Management & Strategic Management: Journey towards Goals Concepts of Management, Definition of Management, Functions of Management, Levels of Management, Concept of Strategic Management, Strategic Management Process- Vision, Mission, Goals, Objectives, Hierarchy of Objectives, Situational Analysis / Internal and External Analysis Organizational Goals, Planning Through MBO- Practical Insights, Michael Porter 5 Forces Analysis, Balanced Score Card(BSC), BSC v/s MBO. Latest Case Studies on Strategic Management: for example Starbucks Corporation, TATA Steel.						7
2	Management Trends and Practices - Let's Explore Comparative Management Styles and approaches: Japanese Management Practices, Organizational Creativity and Innovation, Management of Innovation, Entrepreneurial Management: Benchmarking, Best Management Practices across the world, Selected case Studies of Domestic & International Corporations- Management of Diversity.						7
3	Business Economics – The Road Map Concept and Definition of Micro Economics and Macro Economics, Nature & Scope, Demand, Supply and Market equilibrium: Individual demand, Market demand, Individual supply, Market supply, Market equilibrium; Elasticity's of demand and supply; Price elasticity of demand, Income elasticity of demand, Cross price elasticity of demand, Elasticity of supply, Business cycle, Demographic Profile of Indian Population and Market, Urbanization.						8

4	<p>International Business –Let’s Go Global</p> <p>Basic concept, Decision framework, Analyzing marketing opportunities – collection and analysis of marketing information, Modes of entering overseas markets, International Marketing process and techniques – direct exporting, Indirect exporting, counter trade, Licensing, Sub- contracting, Joint – ventures, Organization and control of international marketing operations, International tendering, Procurement for export; Export information system Global Business Environment, Innovation and International management, managing multinational market, Research Methods in International Business (RMIB).</p>	8

Course Objectives:							
<p>This course aims at enabling students,</p> <ol style="list-style-type: none"> 1. To appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings. 2. To facilitate the development of a holistic perspective among students to lead their personal and professional lives in an ethical way. 3. To highlight plausible implications of such a holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior, and mutually enriching interaction with nature. 							
Course Outcomes:							
<p>After learning the course, the students should be able to:</p> <ol style="list-style-type: none"> 1. Explain the relevance of ‘Universal Human Values’ 2. Develop an understanding about human being as co-existence of ‘Self’ & ‘Body’ 3. Apply the sense of harmony in family and society 4. Take part in ensuring coexistence with nature by integrating Universal Human Values into personal and professional lives. 							
Detailed Syllabus:							
Unit	Description					Duration [Hrs.]	
I	Introduction to Value Education: <ul style="list-style-type: none"> ● Understanding Value Education ● Self-exploration as the Process for Value Education ● Continuous Happiness and Prosperity ● Right Understanding ● Current Scenario ● Method to fulfill the Basic Human Aspirations 					3	
	Practice Session: <ul style="list-style-type: none"> ● Sharing about Oneself ● Exploring Human Consciousness ● Exploring Natural Acceptance Experiential Learning <ul style="list-style-type: none"> ● Seva Activity 					3	
II	Harmony in the Human Being: <ul style="list-style-type: none"> ● Human being: the Co-existence of the Self and the Body ● Needs of the Self and the Body ● The Body as an Instrument of the Self ● Understanding Harmony in the Self ● Harmony of the Self with the Body ● Programme to Ensure Self-Regulation and Health 					4	

	<p>Practice Session:</p> <ul style="list-style-type: none"> ● Exploring the Difference between Needs of Self and Body ● Exploring Sources of Imagination in the Self ● Exploring Harmony of Self with the Body <p>Experiential Learning</p> <ul style="list-style-type: none"> ● Seva Activity ● Health Awareness Programme 	4
III	<p>Harmony in the Family and in Society:</p> <ul style="list-style-type: none"> ● Harmony in the Family ● 'Trust'—the Foundational Value in Relationship ● 'Respect'—the Right Evaluation ● Other feelings (Values) in Human-to-Human Relationship ● Understanding Harmony in Society ● Vision for the Universal Human Order ● Five Dimensions of Human Order 	4
	<p>Practice Session:</p> <ul style="list-style-type: none"> ● Exploring the Feeling of Trust ● Exploring the Feeling of Respect and Exploring Systems to Fulfil Human Goal <p>Experiential Learning</p> <ul style="list-style-type: none"> ● Seva Activity 	4
IV	<p>Harmony in Nature/Existence:</p> <ul style="list-style-type: none"> ● Understanding Harmony in Nature, ● Realising Existence as Coexistence at All Levels ● The Holistic Perception of Harmony in Existence <p>Implications of Holistic Understanding: A Look at Professional Ethics:</p> <ul style="list-style-type: none"> ● Definitiveness of (Ethical) Human Conduct ● Humanistic Constitution and Universal Human Order ● Competence in Professional Ethics ● Holistic Technologies, Production Systems and Management Models-Typical Case Studies ● Strategies for Transitioning towards Value-Based Life and Profession. 	4
	<p>Practice Session:</p> <ul style="list-style-type: none"> ● Exploring the Four Orders of Nature ● Exploring Co-existence in Existence ● Exploring Ethical Human Conduct ● Exploring Humanistic Models in Education ● Exploring Steps of Transition towards Universal Human Order <p>Experiential Learning Activity</p> <ul style="list-style-type: none"> ● Health Awareness Programme/Waste Management Programme (Hospital Waste/Pharmaceutical Industrial Waste/Reduce Plastic Waste / E-Waste Management) 	4

<p>Prior knowledge of</p> <p>a. Mathematical concepts of vector, tensor and differential equation.</p> <p>b. Fundamental concepts and laws/governing equations of physics is essential.</p>							
<p>Course Objectives:</p> <p>This course aims at enabling students,</p> <ol style="list-style-type: none"> To understand the fundamentals of fluid statics and kinematics. To understand the assumptions and importance of governing equations of fluid dynamics in the analysis of various fluid systems. To understand the laminar and turbulent flow through a pipe section. To understand the physics of boundary layer phenomenon. 							
<p>Course Outcomes:</p> <p>After learning the course, the students should be able to:</p> <ol style="list-style-type: none"> Apply the fundamentals of fluid statics and kinematics to solve simple fluid flow problems. Apply the governing equations of fluid dynamics to various fluid flow domains. Analyze the laminar and turbulent flow through a pipe section and study the effect of variation in parameters on the flow type and pattern. Analyze the physics of boundary layer phenomenon. 							
Detailed Syllabus:							
Unit	Description						Duration [Hrs]
I	<p>Fluid Fundamentals and statics</p> <p>Introduction: Types of fluid & Rheological diagram.</p> <p>Fluid statics: Pressure, Pascal's law, Hydrostatic forces on surfaces</p> <p>Fluid Kinematics: Eulerian and Lagrangian approach, Types of flows, Streamlines, streak lines, and path lines, Velocity and acceleration fields, Material and control volume approaches, Continuity equation, Concept of fluid rotation, vorticity. Stream function & velocity potential function and circulation.</p>						8
II	<p>Governing Equations of Fluid Dynamics</p> <p>Introduction to Integral Analysis for a Control Volume: Introduction to Reynolds Transport Theorem (RTT) for conservation of mass, linear and angular momentum (No derivation): Significance and importance. Navier-Stokes equations, Euler equations, Bernoulli's equation.</p>						7

III	<p>Internal Flows / Flow within enclosed surfaces</p> <p>Steady Laminar Flow through parallel plates, through circular pipe, Couette Flow</p> <p>Fully developed laminar flow, Turbulent flow in pipe, Pipes in parallel and concept of equivalent pipe, Moody's diagram, Siphons, Transmission of power.</p>	7
IV	<p>External Flows</p> <p>The Boundary layer concept, Laminar boundary layers – flat plate, Momentum integral equation, Boundary layer thickness – displacement, momentum and energy, Boundary layer separation and methods of controlling Boundary layer.</p> <p>Dimensional Analysis</p> <p>Buckingham Pi theorem, Dimensionless groups and similarity laws, Applications of dimensional analysis in fluid mechanics</p>	8

	Theory	Practical	Tutorial	TW	OR	PR	Total
2	-	4	-	50	50	-	100
Prior knowledge of							
a. Mathematical concepts of vector, tensor and differential equation. b. Fundamental concepts and laws/governing equations of physics is essential.							
Course Objectives:							
1. To use various instruments related to measurement of Pressure, Temperature, Velocity, Flow rate etc. 2. To experimentally verify the fundamentals and principles of Fluid Mechanics. 3. To estimate the losses in internal flow domains. 4. To find the non-dimensional numbers for various fluid flow applications							
Course Outcomes:							
After completion of this course, the students will be able to, 1. Estimate the fluid flow parameters and properties like Pressure, Temperature, Velocity, Flow rate etc . 2. Identify and validate the types of flows. 3. Estimate the flow rate across various flow domains using flow measurement devices. 4. Estimate the major and minor losses through pipe sections of various materials.							
Detailed Syllabus							
Expt. No.	Suggested List of Experiments			Contents			Hrs
1	Study and experimentation on various pressure measuring devices.			a) Study of construction and working of various pressure measuring devices. b) Experimental investigation of pressure across flow domain using various types of manometers, pressure gauge, vacuum gauge, pressure sensor. c) Uncertainty analysis			4
2	Determination of kinematic viscosity of various liquids using redwood viscometer			a) Study of fluid properties: density, specific weight, relative density and viscosity. b) Newton's law of viscosity: Statement and derivation c) Experimental investigation of kinematic viscosity of various liquids using redwood viscometer at various temperatures and its comparison. d) Study of effect of variation of temperature on viscosity of various liquids. e) Plotting of relationship between viscosity and temperature. f) Uncertainty analysis			4
3	Investigation and analysis of cavitation process in fluid domain at different flow rates and pressures.			a) Study of vapors pressure and cavitation b) Effect of cavitation on performance of various fluid systems/machines c) Experimental investigation of cavitation factor d) Experimental investigation of effect of variation of flow rate and pressure on cavitation. e) Estimation of noise at various flow rates and pressures. e) Uncertainty analysis			4
4	Determination of metacentric height of a cargo ship.			a) Study of buoyancy, law of buoyancy, stability of floating body, metacenter, metacentric height and stability of submerged body. b) Physics of ships/boats: An introduction			4

		<ul style="list-style-type: none"> b) Estimation of metacentric height of a floating body c) Uncertainty analysis 	
5	Experimental validation of laminar, transient and turbulent flow through a pipe section.	<ul style="list-style-type: none"> a) Study of laminar, transition and turbulent flow characteristics and Reynold's number b) Visualization of laminar, transition and turbulent flow through a pipe section at various flow conditions. c) Estimation of Reynolds number at various flow rates to validate the observed flow patten. d) Effect of variation of velocity on Reynolds number and flow pattern. e) Estimation of noise at various velocities and pressures. 	4
6	Study and analysis of laminar and turbulent boundary layers on flat plates with rough and smooth surfaces.	<ul style="list-style-type: none"> a) Controlling the flow velocity and Visualization of laminar/turbulent flow b) Effect of variation of surface roughness on flow type , pattern and boundary layer formation and separation c) Estimation of noise at various velocities and pressures. 	4
7	Verification of modified Bernoulli's equation.	<ul style="list-style-type: none"> a) Bernoulli's equation: significance and limitations b) Modified Bernoulli's equation for power producing and power absorbing devices. c) Estimation of total head at various sections of diffuser experimentally. d) Estimation of loss of head and plotting relationship between various types of head and tube area e) Uncertainty analysis 	4
8	Determination of coefficient of discharge for Orifice meter/ Venturimeter.	<ul style="list-style-type: none"> a) Study of construction and working of Orifice meter/ Venturimeter and derivation of expression of discharge and coefficient of discharge. b) Estimation of discharge and coefficient of discharge experimentally. c) Plotting of variation of actual and theoretical discharge and estimation of coefficient of discharge d) Uncertainty analysis 	4
9	Determination of coefficient of V-notch	<ul style="list-style-type: none"> a) Study of construction and working of V notch and rectangular notch and derivation of expression of discharge and coefficient of discharge. b) Estimation of discharge and coefficient of discharge experimentally. c) Plotting of variation of actual and theoretical discharge and estimation of coefficient of discharge d) Uncertainty analysis 	2
10	Determination of Major losses through pipes.	<ul style="list-style-type: none"> a) Study and derivation of Darcy -weisbatch equation to estimate frictional losses. b) Experimental estimation of frictional losses through the pipes of various materials c) To understand the effect of variation of velocity on frictional losses d) Estimation of coefficient of friction for pipes 	4

		of various materials e) Plotting relationship between velocity, loss of head and coefficient of friction. f) Uncertainty analysis	
11	Determination of minor losses through pipes.	a) Study of minor losses and its expressions (no derivation) b) Estimation of head loss in a pipe section due to sudden change in cross-sections and pipe fittings. c) Uncertainty analysis	2
12	Measurement of static pressure distribution, lift and drag around an aero foil using wind tunnel apparatus.	a) Study of lift and drag forces, its importance, wall friction, skin friction coefficient, streamline body, bluff body. b) Physics/dynamics of flight: An introduction c) Construction and working of wind tunnel d) Estimation of static pressure distribution and lift and drag forces around an aero foil.	4
13	Determination of dimensionless numbers for various fluid applications.	a) Importance of dimensional analysis and non-dimensional numbers b) Derivation of dimensionless numbers: Reynolds number, Froude's number, Mach number, Euler's number, Weber's number. c) Calculation of Reynolds no/Froude's no./Mach no/Euler's no in any fluid flow domain (any two) and prepare a case study report of the same.	4
14	Case study presentation by students on 'Model Testing'	To understand the methodology of model performance testing.	6
15	Case study presentation by students on 'Fluid mechanics in medical applications'.	To create awareness about use of fluid fundamentals in the design of medical equipment and for various parametric measurements .e.g. Fluid mechanics of heart valves, Cardiovascular and respiratory systems, Color Doppler	6

Prior knowledge of								
<ol style="list-style-type: none"> 1. Fundamentals of mechanics 2. Types of Motion is essential. 								
Course Objectives:								
Students are expected to study,								
<ol style="list-style-type: none"> 1. To impart practical skills in analyzing mechanisms applied to real-life applications. 2. To develop the competency to analyze the Static and Dynamic behavior of the Mechanism. 3. To synthesize the cams. 4. To perform kinematic analysis of gear trains. 5. To apply the principles of the Governor and Gyroscope to control speed. 								
Course Outcomes:								
After completion of this course, the students will be able to,								
<ol style="list-style-type: none"> 1. Build the mechanisms and perform kinematic analysis- experimental and numerical. 2. Analyze the static and dynamic forces on the mechanisms using simulation tools 3. Analyze the Epicyclic Gear Train for torques. 4. Determine the characteristics of speed control devices 5. Synthesize Cam for a given application using the simulation tool 								
Detailed Syllabus								
Expt. No.	Suggested List of Experiments						Duration Hrs.	
I	Kinematic Analysis of Mechanism Part A: Building mechanisms using a mechanism building kit and study motion conversions and inversions Part B: Perform kinematic analysis with parametric variation- Part C: Kinematic analysis of four bar and slider crank mechanism (Software Simulation) Model the four bar and slider crank mechanism Model the mechanism built in Part A Vary link lengths and observe the impact on output motion. Simulate kinematic motion, varying input parameters like link lengths and angular velocities. Analyze resulting motion data, focusing on displacement, velocity, and acceleration profiles						20	
II	Static and Dynamic analysis of Mechanism (Software Simulation) Static and dynamic analysis of four bar and slider crank mechanism Model the four-bar and slider crank mechanism Model the mechanism built in Experiment I Part A Perform static analysis to determine forces and torques in static equilibrium for the mechanism Dynamic analysis for the four-bar mechanism, considering mass, accelerations, velocities, and forces during motion. Varying parameters such as link lengths or/ and input velocities to observe changes in static and dynamic behavior.						14	
III	Speed and torque analysis of Epicyclic gear train to determine holding torque Kinematic analysis (speed ratio) of Epicyclic gear set Analyze the relationship between input speed, output speed, and torque using experimental setup Compare theoretical values with experimental results.						04	

IV	To verify the gyroscopic principle	02
V	Characteristics comparison of a gravity-loaded and Spring-loaded governor and evaluate governing parameters. Effect of controlling parameters with weight. Analyze the speed response characteristics of each governor type. Measure the power consumption of the motor for different governor settings.	06
VI	Part A: To simulate Cam profiles for various follower motion and comparison for different performance parameters - study cam size, pressure angle and effect of change in base circle diameter. Effect of different cam sizes and pressure angles on follower motion Plot graphs illustrating the relationships between cam size, pressure angle, and follower performance parameters. Part B: Synthesize cam for automation requirement	10
VII	Kinematic analysis of different types of gearbox– Case study Based	04

Prior knowledge of Fundamental knowledge of electromagnetism & electrical parameters is essential.							
Course Objectives: This course aims at enabling students, 1. To impart basic knowledge for conceptual understanding of DC machines. 2. To explore the construction and performance characteristics of three phase AC machines. 3. To explore the construction and performance characteristics of single-phase AC machines. 4. To relate the applications of electrical machines to practical and industrial scenarios.							
Course Outcomes: After learning the course, the students should be able to: 1. Describe the constructional features and working principles of DC Machines. 2. Explain the constructional features and operation of three phase induction motors 3. Explain the constructional features and operation single phase induction motors 4. Relate the applications of electrical machines to their respective fields of study and industrial applications.							
Detailed Syllabus:							
Unit	Description						Duration [H]
I	Introduction to Electrical Machines: Overview of electrical machines and their significance, Classification of electrical machines, Fundamental principles: Faraday's Law, Lenz's Law, and Electromagnetic Induction. DC Machines Working principle of DC machine as a generator and a motor; Types and constructional features; EMF equation of generator, DC motor working principle; Back EMF and its significance, torque equation; Types of D.C. motors, characteristics, Necessity of a starter for DC motor, Speed control methods of DC shunt and DC series motor and industrial applications.						8
II	Three phase induction motor – constructional features, working principle, Rotating magnetic field, and slip ring and cage types. Slip, phasor diagram, expression for mechanical power and torque, torque-slip characteristics, starting torque, full load and pull-out torque, equivalent circuit. Industrial applications.						7
III	Single phase induction motors: Construction of single-phase induction motor, double field revolving theory. Types of single-phase induction motors: Split phase and shaded pole type induction motors, applications. Specifications of induction motors (KW rating, rated voltage, current rating, frequency, speed, class of insulation)						8

IV	Special Purpose Motors: Construction, principle of working, characteristics ratings and applications of Brush less D.C. motors, Stepper motors (permanent magnet and variable reluctance type only), Permanent Magnet motor (A.C. & D.C.), SRM Switch reluctance motor.	7

Prior knowledge of Linear Algebra & Differential Calculus is essential.							
Course Objectives:							
This course aims at enabling students,							
1. To develop an understanding of students related to signal representation, classification, and operations.							
2. To build the understanding of analyzing and classifying the systems and their applications							
3. To apply the basic concept of Fourier transform and Laplace transform to the systems							
Course Outcomes:							
After learning the course, the students should be able to:							
1. Represent, classify, and perform the operation on signals							
2. Classify the system and utilize convolution for system analysis							
3. Apply the basics of Fourier transform to analyze the signal in frequency domain							
4. Apply the basics of the Laplace transform to analyze the signal in a complex frequency domain.							
Detailed Syllabus:							
Unit	Description						Duration [H]
I	Introduction to Signals: Representation of Standard signals, Classification of signals: Continuous-time and discrete-time signals, Periodic Signals and non-periodic, Operations on signals: Time shifting, Time reversal, Time scaling, Amplitude scaling, Signal addition, Subtraction, Signal multiplication.						07
II	Introduction to System: System Definition and Application, Classification of Systems: Continuous-time and Discrete-time systems, Linear and Non-Linear systems, Time variant and Time-invariant systems, Stable and Unstable systems, Causal systems, and non-causal systems. Convolution sum using graphical method.						07
III	Fourier Transform: Fourier Transform (FT) representation of aperiodic continuous time (CT) signals, Evaluation of magnitude and phase response, FT of standard CT signals, Application of Fourier transform						08
IV	Laplace Transform and Z Transform: Definition of Laplace Transform (LT), ROC, Laplace transform of standard periodic and aperiodic functions, Inverse Laplace transform, Application of Laplace transforms.						08

02	02	-	-	10	10	30	50

Pre-requisites: Nil

Course Objectives:

1. To demonstrate the use of mathematical techniques in the field of data science.
2. To explain the theory of statistics for its use in statistical inference.
3. To perform the data preprocessing operations.
4. To demonstrate the use of data visualization and data analytics techniques.

Course Outcomes:

After learning the course, the students will be able to:

1. Understand data science life cycle phases and analyze the need of data preprocessing
2. Analyze the need for data visualization and apply descriptive/inferential statistics for data analysis.
3. Solve the regression/classification problem for data analysis and apply the model evaluation techniques using different performance measures.
4. Apply data science in various domains.

Detailed Syllabus

Unit	Description	Duration (H)
I	<p>Introduction to Data Science and Data Preprocessing:</p> <p>Introduction to Data Science: Data Science Life Cycle, Data Analytics and Types, Key performance indicators of data science projects.</p> <p>Data Preprocessing: Need, preprocessing techniques for: handling redundant data, data transformation, replacing or handling missing data, and handling data inconsistency.</p>	8
II	<p>Data Visualization and Hypothesis Testing:</p> <p>Data Visualization: Introduction, need, Data visualization techniques: line plot, scatter plot, histogram, density plot, box plot, bar plot, pie chart, heat map, etc.</p> <p>Statistics and Inference – Measures of central tendency, Measures of variability: standard deviation, variance, quartiles, Interquartile range. Skewness and Kurtosis. Sampling and Inference - Sampling: Introduction, types of sampling. Hypothesis testing, types of errors, level of significance, and test of hypothesis: t-test, z-test, Correlation analysis: Pearson's correlation coefficient.</p>	8

III	Model Evaluation for Regression and Classification : Performing a linear Regression: Linear function, Fitting the line, residual errors, coefficient of determination. Performing a logistic Regression: Logistic function, fitting the curve, understanding the log-odds, R-Squared. Performing classification: Naive Bayes classifier. Model Evaluation and Selection: holdout method, random sub-sampling, cross-validation. Model's parameter tuning and optimization. Performance metrics for evaluation of model, confusion matrix, AUC-ROC analysis	8
IV	Applications of Data Science: Case study on Smart cities: the role of Internet of Things and machine learning, Energy consumption: Machine Learning models for energy consumption forecasting , Supply Chain: Supply chain optimization using machine learning , Finance : Fraud detection and prevention in finance, Healthcare: Machine learning for Breast cancer prediction	6

02	02	-	-	10	10	30	50
Prior knowledge of basic physics, chemistry and nanotechnology is essential.							
Course Objectives:							
This course aims at enabling students,							
1. To learn the principles of advanced materials, technologies and characterizations.							
2. To undertake research projects with applications of advanced materials.							
Course Outcomes:							
After learning the course, the students should be able to:							
1. Interpret structure, properties and applications of advance engineering materials.							
2. Explain the properties and requirements of materials for some advanced applications							
3. Analyze structural, optical, elemental & morphological properties of the materials							
4. Interpret electrochemical & thermal properties of the materials							
Detailed Syllabus:							
Unit	Description						Duration [Hrs]
I	Engineering Materials Polymer Composite eg. fiber- reinforced polymer (FRP) composites Advanced carbon materials eg. Graphene & CNT Alloys: a) Nano alloy eg. Cu-Ni nano alloy b) Memory alloy-Nitinol CdSe Thin films for solar cells.						7
II	Materials for Special applications Battery and Supercapacitor: working principles, components, Superconductors, material requirement and properties of electrodes, electrolytes and spacers, metallic, nonmetallic and ceramic superconductors, Applications, Gas Sensing: working principle and required material properties. Substrate Materials for quantum computer, Invar and Elinvar Materials: properties and applications, 2D materials: properties and their applications						7
III	Structural, Optical, Elemental & Morphological Characterizations X-Ray Diffraction and phase identification, indexing lattice parameter determination, Grain size analysis, EDAX, Electron microscopy, scanning electron microscopy, Transmission electron microscopy (TEM), Fourier Transform Infrared Spectroscopy, Band gap measurements-UV Vis- IR Spectroscopy						8

IV	<p>Electrochemical Characterization Cyclic voltammetry: Instrumentation, current-potential relation applicable for Linear Sweep Voltammetry (LSV) and Cyclic Voltammetry (CV), interpretation of cyclic voltammograms, charging-discharging behaviors of supercapacitor and batteries.</p> <p>Thermal Analysis techniques: Thermo-gravimetric analysis (TGA), Differential thermal analysis (DTA) analysis, Thermal expansion measurements, Thermal conductivity measurements, Ionic conductivity measurements. Specific heat capacity measurements, Debye temperature measurements</p>	8

Prior Knowledge:

1. Fundamentals of environmental science.
2. Fundamentals of sustainable development.

Course Objectives:

This course aims at enabling students,

1. To impart the knowledge of issues and challenges of e-waste management.
2. To create awareness of potential health effects and risk associated with e-waste.
3. To build knowledge of e-waste legislation (policy and guidelines) and circular economy.
4. To get acquainted with recycling, recovering and disposal techniques.

Course Outcomes:

After learning the course, the students should be able to:

1. Identify the issues and challenges of e-waste management for a sustainable environment.
2. Analyze potential health effects and risk assessment.
3. Illustrate e-waste laws and guidelines and apply a circular economy road map for an e-waste sustainable future.
4. Identify the e-waste recycling, recovery and disposal techniques and its significance for a sustainable future.

Detailed Syllabus

Unit	Description	Duration (H)
I	Electronic Waste Management – Issues and Challenges: Introduction to e-waste, classification and composition, need to manage / recycle, E-waste generation in India and comparison with world scenario; facts & figures, estimation of waste electronic and electrical equipment (WEEE), economic assessment of E-waste (Rare earth minerals, precious metals), effluents (solid, liquid and gas) generated during recycling, quantification of health hazard due to informal recycling of E-Waste,(Case study-based learning)	7
II	E-Waste-Environmental and Public health issue: Characteristics of Hazardous Substances, toxicity concerns, potential health effects and symptoms of long-term exposure, case study of heavy metal contamination due to E-Waste recycling, Introduction to risk assessment, epidemiologic data analysis and parameter for determining exposure and disease (numerical), classification of potential carcinogens, dose-response assessment, Potency Factor for Carcinogens (numerical), Hazard Index (HI) and Hazard Quotient (HQ) (numerical)	8

III	E-waste (Management & Handling) Rules / Guidelines and circular economy: Regulatory frameworks in India, objectives of e-waste rules, hazardous and other wastes (Management and Transboundary Movement) Rules, 2016, application of rules to stakeholders, objectives of e-waste rules, India's stand on liberalizing import rules, UN Sustainable Development Goals (SDGs) and e-Waste, circular economy startup in India with a case study.	7
IV	Recycling and Recovery of Metals from Electronic Waste and disposal techniques: E-waste recycling machineries, recycling process of E-Waste, existing E-Waste recycling Techniques, case study/ examples (metal recovery process), mechanism of extraction of precious metal from leaching solution, recovery of precious metals from solutions by solvent extraction, extraction of precious and rare earth metals from End-of- Life (EOL) electronic products, disposal techniques, role and responsibility of extended producers' responsibility (EPR), E-waste economy in the organized and unorganized sector, Case study on recycling and precious metal recovery from e-waste.	8

Prior knowledge : NIL							
Course Objectives: This course aims at enabling students :							
<ol style="list-style-type: none"> 1. To introduce the students to the concept of Design Thinking and its relevance in innovation 2. To equip students with the core concepts, frameworks, and techniques of Innovation management and its Applications. 3. To help students to understand design thinking as a creative problem-solving approach 							
Course Outcomes:							
After learning the course, the students will be able to:							
<ol style="list-style-type: none"> 1. Explain the concept of Design Thinking and Opportunity Assessment in Business 2. Demonstrate strategic foresight for the business models 3. Apply the concept of Innovation Management in for business growth. 4. Apply the techniques of Internet Business Design for business growth 							
Detailed Syllabus:							
Unit	Description						Duration [Hrs]
I	Introduction to Design Thinking: Meaning of Design Thinking, Design thinking for competitive advantage, The Need for Creative and Design, why design needs entrepreneurial mindset, combining entrepreneurial and design thinking, Opportunity Assessment - "How do we source and identify opportunities?" and "Which opportunities should we invest time and money in?" Three dimensions of Opportunity Assessment -Product-Market fit, Product-Company fit, and Product-Business fit. "Go/No-Go" recommendation to invest and initiate.						7
2	Business Challenges and Design Thinking Solutions Paradigm Shift: The seven steps of design thinking, Tools of Design Thinking, First Mover and late mover Advantage, Five Cs of Opportunity Storytelling, Strategic Foresight, Sensing, Value Redefinition, Experience Design, Humanization, Prototyping, Business Model Design "Knowledge Brings Freedom"						8
3	Innovation Management: Concept of Innovation, Characteristics of innovation, Sources of innovation, Types of innovation, Levels of Innovation, Evolution of innovation management, Organizations and Innovation Process, Diffusion of Innovation, Effective innovation management, Performance evaluation, Risk Management in Innovation. Case Studies based on Innovation management						7

4	Internet Business Design: Digital/Internet Business Model, Design of Services and Customer Experience. Service sector – IDEO, Lego, E-commerce market players design thinking strategies. Design Thinking and IoT Toward Sustainable Design Thinking. Managing Future Technologies, and minimizing risk of failure.	8

Prior knowledge : Nil							
Course Objectives:							
This course aims at enabling students :							
<ol style="list-style-type: none"> To help the students gain understanding regarding the concept of projects and Project Management To enable the students to know the key components of project management including time, cost & Risk. Recognize issues in a realistic project scenario to understand design thinking as a creative problem-solving approach 							
Course Outcomes:							
After learning the course, the students will be able to							
<ol style="list-style-type: none"> Explain different stages of project and their significance. Demonstrate the triple constraints concepts in project management. Apply appropriate approaches to plan execute and evaluate projects through case studies. Analyze to mitigate the risk associated with projects. 							
Detailed Syllabus:							
Unit	Description						Duration [Hrs.]
I	Introduction to Project Management : Concept and Definition of Project, Characteristics of Project, Concept and definition of Project Management, Functions of Project Management, Importance of Project Management, Who is a Project Manager, Roles & Responsibilities of Project Manager. Understanding the Phases in the Lifecycle of Projects and their Significance, Different types of Projects: Industrial, Telecommunication, Research and more, Project Selection Methods : Agile method , Waterfall, Methods, Scrum Model & Kanban Model, Jira Model						7
II	The Triple Constraint in Project Management : The concept of the Triple Constraint in Project Management : Scope, Cost and Time, Project Cost Management : Concept, Consideration, Five types of Costs involved in a project, Cost Management process, Project Time Management and methods of Time estimation, Communications Management in Project , Work Breakdown Structure (WBS). Case studies based on Mega Projects of the World.						7
III	Planning and Execution of Project: Developing a Mission, Vision, Goals of the project. Concept and definition of Project Planning. Importance of Project Planning. Concept of Project Execution, Phases of Project Execution, Project Evaluation; The Review Technique – Planning and Scheduling of Activity, Networks - Concept of PERT/CPM, Assumptions in PERT Modeling – Time-cost, Trade-offs, HRM issues in Project Management & How they can be tackled, Reasons for Failures of Project , Case Study with respect to different Domains						8

IV	Project Monitoring and Risk Management : Concept of Project Monitoring , How to Building a Suitable Monitoring; Control System, Concept of Conflict Management, Concept & Definition of Risk and Risk Management, Concept of Risk Matrix Analysis, Strategies to Manage Risks, An Overview of Useful Techniques and Tools Used in Project Management. Case Studies with respect to different Domains.	8

Course Objectives: This course aims at enabling students : <ol style="list-style-type: none"> 1. To inculcate an entrepreneurial mindset into the minds of young professionals 2. To enable the students to evaluate challenges relating to new ventures. 3. To provide the students an understanding about different skills for founding, leading & managing startups. 							
Course Outcomes: After learning the course, the students will be able to: <ol style="list-style-type: none"> 1. Explain the concepts and role of entrepreneurship. 2. Identify new venture opportunities in today's Business world. 3. Analyze strategic choices in relation to the growth of new ventures 4. Correlate the Startup opportunities and key factors supporting the Startup Culture in India. 							
Detailed Syllabus:							
Unit	Description						Duration [Hrs.]
I	The Entrepreneurial Perspective : Why to become entrepreneur ,Characteristics of an Entrepreneur, Functions of an Entrepreneur, Types of Entrepreneurs , Distinction between Entrepreneur and Manager The entrepreneurial decision process, Role of entrepreneur in economic development, future of entrepreneurs, Concept of Business Opportunity, Business Opportunities Identification Process..						7
2	Creating & Starting Ventures : Concept of business idea, Sources of new idea generation, Methods of Idea generation, Creative problem solving, Product planning and development, Business Structure, Creating a Business Plan, Market Size Analysis, Legal issues and Regulations to set up a business, Business Patents, Trademarks, Copy rights, Trade secrets, Licensing.						7
3	Managing and Growing a New Business Venture : Attractiveness of a new entry opportunity- Entry strategy for new entry exploitation-risk reduction strategies for new entry exploitation, Growth Strategies – economic implications of growth, overcoming pressures on existing financial resources, human resources, management of employees and entrepreneur's time, Sustaining a Business turbulence, Government incentives & Schemes.						8

4	<p>The Startup Ecosystem in India :</p> <p>Meaning of Startup, Types of Start-ups, and The Rise of The Startup Economy, Startup Policy, Startup opportunities, and Financial support for Startups. Recent initiatives including Start up India, Make in India, Digital India, and Policies for technology Start-ups, E-commerce Startups, Tech Support and Proto type Development centers. Startup Infrastructures: Co – Working Space, Market development initiatives.</p>	8

Course Objectives:							
This course aims at enabling students							
<ol style="list-style-type: none"> 1. The inculcate the knowledge of the core concepts of business finance and its importance in managing a business 2. To improve students 'understanding of the time value of money concept and the role of finance in the Current competitive business scenario.. 							
Course Outcomes:							
After learning the course, the students will be able to :							
<ol style="list-style-type: none"> 1. Explain the concept of Business Finance and financial planning. 2. Illustrate the concept of capitalization in Business Organizations. 3. Analyze Financial markets and the role of financial institutions in Business Development. 4. Evaluate the role of Financial System in Business. 							
Detailed Syllabus:							
Unit	Description						Duration [Hrs.]
1	Business Finance: Concept of Business Finance, Objective and Scope, Significance of Finance, principles of business finance, Finance Function, Business finance v/s Corporate finance, Source of Finance. Meaning of financial planning, steps in financial planning, significance of financial planning, essential features of a good financial plan, Personal financial planning, Types of financial plan.						7
2	Capitalization : Introduction to capitalization, Amount of Capitalization, Over Capitalization, Under Capitalization, Venture Capital - Meaning of Venture Capital, Method of Venture Financing ,Venture Capital Funds, Policies and Procedures adopted by Venture Capitalists, Venture Capital in India, Guidelines for Venture Funds.						7
3	Financial Markets, Institutions and Instruments: Introductions to Financial Markets: Nature, Functions and Types of Financial markets, Different Financial Instruments, Sources of financing: Shares, Debentures, Term Loans, Retained Earnings, Public Deposits, Bonds, Trade Credit, Mutual Funds - Definition, Types of Mutual Funds, Significance of Mutual Funds; Case Studies on Financial Markets.						8

4	<p>Constituents of the Financial System and Regulatory Institutions :</p> <p>Classification: Fund Based, Non Fund Based and Modern Services, Hire Purchasing, Leasing: Lease Financing - Essential Elements of Leasing, Types of Leases, Merits and Demerits of Lease Financing, Merchant Banking - Role; Functions of Merchant Banking, Factoring. Debt management, Portfolio Management.</p> <p>RBI - Organization, objectives, role and functions, monetary policy of RBI, NABARD, SEBI - Organization and Objectives</p>	8

2	2	-	-	20	30	-	-	50
Course Objectives:								
<ol style="list-style-type: none"> 1. Provide an overview of the historical context leading to the framing of the Indian Constitution. 2. Study the fundamental rights enshrined in the Constitution and their application. 3. Study the structure and functions of key constitutional institutions like the President, Parliament, and Judiciary. 								
Course Outcomes:								
After learning the course, the students will be able to								
<ol style="list-style-type: none"> 1. Demonstrate Historical Understanding. 2. Analyze Fundamental Rights and Duties 3. Comprehend Constitutional Institutions 4. Evaluate Constitutional Amendments and Contemporary Issues. 								
Detailed Syllabus:								
Unit	Description							Duration (Hrs.)
I	Fundamentals of Indian Constitution <ul style="list-style-type: none"> • Introduction to the Indian Constitution: Historical background, making of the Constitution, and its significance • Preamble: Understanding the importance and interpretation of the Preamble to the Constitution • Fundamental Rights, Directive Principles of State Policy • Analyze the salient features of the Indian Constitution 							7
II	Structure and Functioning of Government <ul style="list-style-type: none"> • Union Executive: Study of the President, Vice-President, Prime Minister, and Council of Ministers, along with their powers and functions • Parliament: Understanding the composition, powers, and functioning of the Lok Sabha and Rajya Sabha • Judiciary: Analysis of the structure, independence, and functioning of the Supreme Court and High Courts • Federalism: Examination of the division of powers between the Union and States, along with the role of institutions like Governors and State Legislatures 							7
III	Constitutional Amendments and Legal Framework <ul style="list-style-type: none"> • Amendment Process: Understanding the procedure for amending the Constitution and significant amendments • Constitutional Bodies: Study of institutions like the Election Commission, Comptroller and Auditor General, and their constitutional roles • Emergency Provisions: Analysis of the provisions related to national emergency, state emergency, and financial emergency • Constitutional Remedies: Detailed study of writs, judicial review, and other constitutional remedies available to citizens 							8
IV	Contemporary Issues and Challenges <ul style="list-style-type: none"> • Judicial Activism: Analysis of the role of the judiciary in addressing contemporary issues and ensuring constitutional principles • Constitutional Governance: Examination of challenges to constitutional governance, including federalism, secularism, and social justice • Constitutional Amendments: Critique of recent constitutional amendments and their implications on democracy and governance • Comparative Constitutional Law: Comparison of the Indian Constitution with other constitutions to understand global constitutional trends and best practices 							8

Prior knowledge of							
1. Engineering drawing, dimensioning. 2. Conventional manufacturing processes is essential.							
Course Objectives:							
Students are expected to study,							
1. To get acquainted with relevant industrial standards and best practices related to GD and T 2. Learn GD and T symbols, annotations and their applications in design and manufacturing.							
Course Outcomes:							
After completion of this course, the students will be able to,							
1. Understand and represent IS conventions of machine components 2. Interpret the production drawing using GD and T Principles. 3. Determine dimensional Tolerances to achieve desired functional requirements 4. Generate production drawing using CAD tools and apply GD and T principles to assemblies							
Detailed Syllabus							

Expt. No.	Suggested List of Experiments	Duration Hrs.
I	Principles of drawing and various IS Standards and sign conventions of machine elements, Surface finish grades and symbols, Welding symbols, Study of drawing sheet layout, Bill of Material.	6
II	Dimensional Tolerancing- Limits, Fits and Tolerances (a) Terminology, Maximum and Minimum Material conditions, Features, Rules for GD and T, Datum Control. (b) Calculation of Tolerances based on Type of Fits in Assembly (c) Selection from standard charts.	8
III	Geometrical Tolerancing- (a) Form, Orientation, Profile and Location Tolerances. (b) Datum selection. (c) Measurement of form tolerances	6
IV	Read, Interpret and generate Industrial Production Drawing by applying GD and T concepts Read and Interpret existing Industrial Production Drawing Generate Production drawing for any 2 assemblies.	10
		30
Assignments		
1	Drawing sheet on various conventional representations of machine components, materials, surface	

	finish and joints.
2	Determination of dimensional tolerances for real life functional assemblies.
3	Reading Industrial Drawing and Interpretation of geometrical tolerances. (Any two)
4	Generation of production drawing for given parts and assembly by applying required GD and T symbol using CAD software. (Any two)

Geometric Dimensioning and Tolerancing: A Complete Guide, Blokdyk, Gerardus, (2019), 2020 Edition", 5STARCOoks. Standards: ISO/TR 23605:2018, ISO 1101:2017, SP 46, IS 15054(2001) 	

Program:	B. Tech. (Mechanical)					Semester: IV		
Course:	Computer Aided Machine Drawing					Code:	BME24VS04	
Credits	Teaching Scheme (Hrs. /Week)			Evaluation Scheme and Marks				
	Theory	Practical	Tutorial	TW	OR	PR	Total	
1	-	2	-	50	-	-	50	
Prior knowledge of Engineering drawing, dimensioning, Conventional manufacturing processes Engineering 2D drawings, Machine elements used in mechanical engineering is essential.								
Course Objectives: Students are expected to study, <ol style="list-style-type: none"> 1. To develop parametric and feature based parts along with assembly models of simple mechanisms/machines. 2. To develop surface models for mechanical components. 3. To develop 2D drafting from 3D models 								
Course Outcomes: After completion of this course, the students will be able to, <ol style="list-style-type: none"> 1. Model 3D machine components used in interdisciplinary applications. 2. Draft engineering parts and assembly using CAD tools. 								
Detailed Syllabus								
Expt. No.	Suggested List of Experiments						Duration Hrs.	
I	Sketching Introduction to Graphical User Interface (GUI) of solid modeling software, 2-D sketching with geometrical and dimensional constraints.						6	
II	Parametric solid modeling Fundamentals, apply/modify constraints and dimensions, transform the parametric 2-D sketch into a 3D solid, feature operations.						8	
III	Assembly modeling Defining relationship between various parts of machine, creation of constraints, and generation of exploded view.						8	
IV	Introduction to surface modeling Introduction to Surface Design, Creating Wireframe Geometry, Shape Design Common Tools, Creating Surfaces, Understanding operations toolbar. Drafting Generation of 2-D sketches from parts and assembly 3-D model, appropriate dimensioning.						8	
						Total	30	
List of Assignments								
1	Assignment on parametric solid modeling of a machine component using various commands and features of the software.							

2	Assignment on assembly modeling of the mechanisms/machine parts modeled in assignment 1 using proper constraints and generation of exploded view. (min. 5 components)
3	Assignment on generation of production drawings of the parts and assembly.
4	Assignment on surface modeling of a machine components
5	A group mini project on industrial assembly of any mechanisms/machine with drafting

VISION

To be the department of sustainable academic excellence, fostering innovation, skill development, and work ethics leading to globally competent mechanical engineers.

जागतिक स्तरावर सक्षम यांत्रिक अभियंत्यांना मार्गदर्शन करणारा नावीन्य, कौशल्य विकास आणि कामाच्या नैतिकतेला चालना देणारा शाश्वत शैक्षणिक उत्कृष्टतेचा विभाग बनणे.

MISSION

- 1. Nurture cohesive learning environment and develop matching ecosystem.**

एकसंध शिक्षण वातावरण जोपासणे आणि जुळणारी परिसंस्था विकसित करणे.

- 2. Cultivate excellent work ethics and right attitude among students by imparting essential skills and knowledge.**

आवश्यक कौशल्ये आणि ज्ञान देऊन विद्यार्थ्यांमध्ये उत्कृष्ट कार्य नैतिकता आणि योग्य दृष्टिकोन विकसित करणे.

- 3. Instill a sense of creativity, social responsibility and environmental awareness among students.**

विद्यार्थ्यांमध्ये सर्जनशीलता, सामाजिक जबाबदारी, आणि पर्यावरण विषयक जागरुकता निर्माण करणे.

Program Educational Objectives

1. To cultivate knowledge and skills in formulating, analyzing, and solving interdisciplinary engineering problems among the mechanical engineering graduates.
2. To inculcate right attitude and awareness about codes of professional practice, social commitment, and life-long learning among the mechanical engineering graduates.
3. To enhance professional competence for catering to the needs and expectations of society as a profound Mechanical Engineer.

Program Specific Outcomes

1. Conceptualize, design, model, simulate, and analyze mechanical components, systems and processes in complex interdisciplinary applications.
2. Develop sustainable solutions to real-life mechanical engineering problems in products and process industries.
3. To practice professional codes and conducts, safety norms, industrial engineering and management principles while working in the industry or as an entrepreneur.
