

**Pimpri Chinchwad Education Trust's**  
**PIMPRI CHINCHWAD COLLEGE OF ENGINEERING**  
**SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044**  
**(An Autonomous Institute Approved by AICTE and Affiliated to SPPU, Pune)**

**Curriculum Structure and Syllabus**  
**of**  
**Third Year B. Tech. Mechanical Engineering**  
**(Regulation 2023)**

**Effective from Academic Year 2025-26**

### **Institute Vision**

To be one of the top 100 Engineering Institutes of India in coming five years by offering exemplarily Ethical, Sustainable and Value Added Quality Education through a matching ecosystem for building successful careers.

### **Institute Mission**

1. Serving the needs of the society at large through establishment of a state-of-art Engineering Institute.
2. Imparting right Attitude, Skills, and Knowledge for self-sustenance through Quality Education.
3. Creating globally competent and Sensible engineers, researchers and entrepreneurs with an ability to think and act independently in demanding situations.

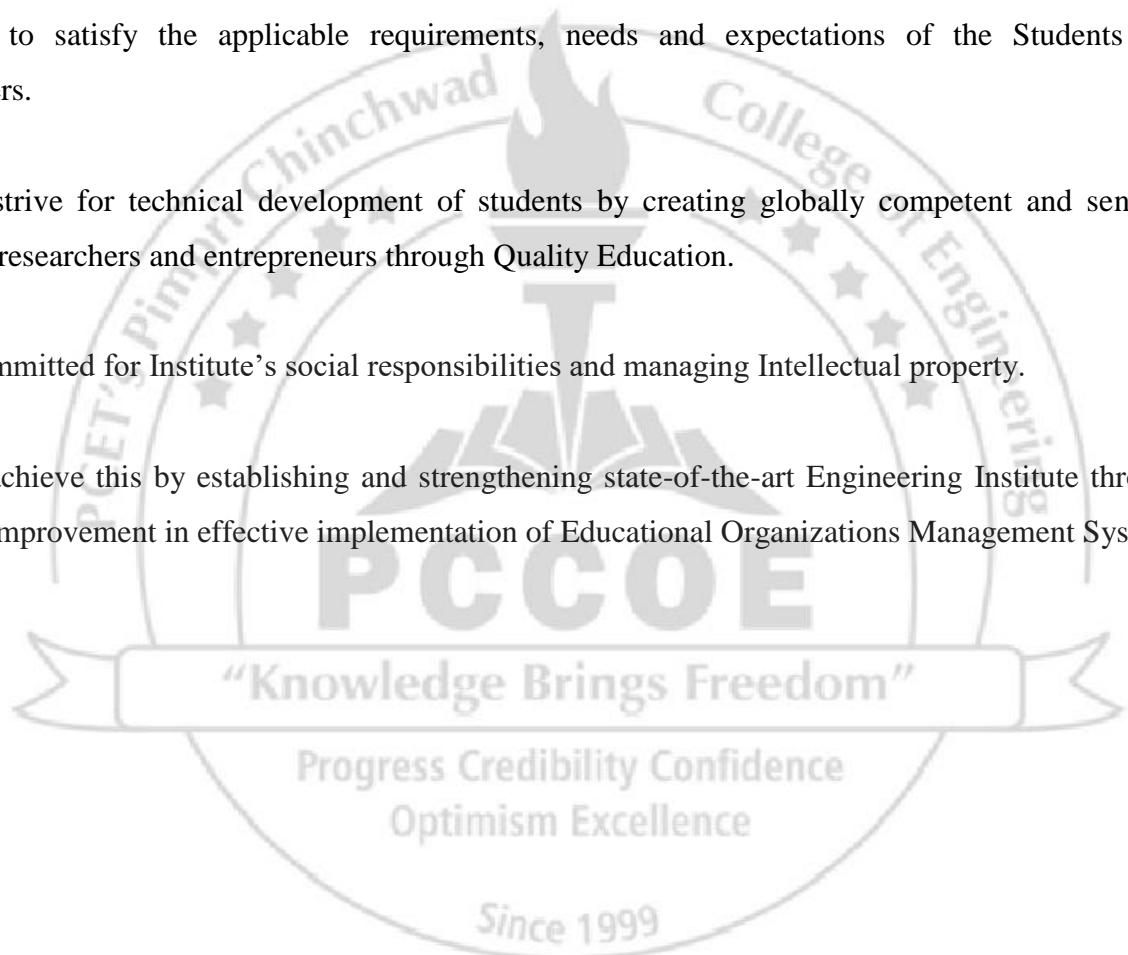

### **EOMS Policy**

“We at PCCOE are committed to offer exemplarily Ethical, Sustainable and Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders.

We shall strive for technical development of students by creating globally competent and sensible engineers, researchers and entrepreneurs through Quality Education.

We are committed for Institute’s social responsibilities and managing Intellectual property.

We shall achieve this by establishing and strengthening state-of-the-art Engineering Institute through continual improvement in effective implementation of Educational Organizations Management Systems (EOMS).”

## Course Approval Summary

### Board of Studies - Department of Mechanical Engineering

| Sr. No. | Name of the Course                       | Course Code | Page number | Signature and stamp of BoS chairman |
|---------|--|-------------|-------------|-------------------------------------|
| 1.      | Heat Transfer                            | BME25PC10   | 15          |                                     |
| 2.      | Heat Transfer Lab                        | BME25PC11   | 17          |                                     |
| 3.      | Machine Design                           | BME25PC12   | 19          |                                     |
| 4.      | Machine Design Lab                       | BME25PC13   | 21          |                                     |
| 5.      | Mechatronics                             | BME25PC14   | 23          |                                     |
| 6.      | Mechatronics Lab                         | BME25PC15   | 25          |                                     |
| 7.      | Applied Thermal Engineering              | BME25PE01   | 27          |                                     |
| 8.      | Machining Processes                      | BME25PE02   | 31          |                                     |
| 9.      | Industrial Hydraulics and Pneumatics     | BME25PE03   | 35          |                                     |
| 10.     | Mechanical Power Transmission            | BME25PE04   | 39          |                                     |
| 11.     | Applied Thermal Engineering Lab          | BME25PE05   | 29          |                                     |
| 12.     | Machining Processes Lab                  | BME25PE06   | 33          |                                     |
| 13.     | Industrial Hydraulics and Pneumatics Lab | BME25PE07   | 37          |                                     |
| 14.     | Mechanical Power Transmission Lab        | BME25PE08   | 41          |                                     |
| 15.     | Numerical Methods and Optimization       | BME26PC16   | 58          |                                     |

# Refer separate booklet for multidisciplinary minor (MDM) courses

**L**- Lecture, **P**- Practical, **T**- Tutorial, **O**- Other i.e. self-directed learning, (self- study), **FA**-Formative Assessment, **SA**-Summative Assessment, **TW**-Term Work, **OR**-Oral, **PR**-Practical

**Note:**

Students must ensure that the same course (Contents) is not selected under multiple categories (Core Courses, Professional Electives, Open Electives, or Multidisciplinary Minors (MDMS), or any other Course where choices are given. Each course can only be credited once towards the degree requirements. Students are required to acknowledge and agree to this condition before proceeding with registration.

**List of courses – Programme Elective Course – I**

| Course Code | Course Name                              | Remark   |
|-------------|--|--|
| BME25PE01   | Applied Thermal Engineering              | Choose any one                                       |
| BME25PE02   | Machining Processes                      |  |
| BME25PE03   | Industrial Hydraulics and Pneumatics     |  |
| BME25PE04   | Mechanical Power Transmission            |  |
| BME25PE05   | Applied Thermal Engineering Lab          | Choose respective Lab for the selected theory course |
| BME25PE06   | Machining Processes Lab                  |  |
| BME25PE07   | Industrial Hydraulics and Pneumatics Lab |  |
| BME25PE08   | Mechanical Power Transmission Lab        |  |

**OPEN ELECTIVE 4 COURSES OFFERED TO MECHANICAL**

| Course Code | Course Name   | Offered by       | Remark         |
|-------------|---|------------------|----------------|
| BET25OE01   | Introduction to Advanced Driver Assistance System       | E&TC             | Choose any one |
| BET25OE02   | Engineering Psychology                                  | E&TC             |                |
| BCE25OE01   | Data Security Resiliency and Governance                 | Computer Engg.   |                |
| BCE25OE01   | Digital Marketing                                       | Computer Engg.   |                |
| BIT25OE02   | Cloud Computing   | IT               |                |
| BCS25OE03   | Business Intelligence                                   | CSE(AI&ML)       |                |
| BME25OE06   | Professional Ethics and Sustainability in the Age of AI | Mechanical Engg. |                |
| BCI125OE04  | Remote Sensing and GIS                                  | Civil Engg.      |                |

## CURRICULUM STRUCTURE THIRD YEAR B. TECH. (MECHANICAL ENGINEERING) Semester – VI

**Prior knowledge of** Fundamental concepts of Engineering Thermodynamics, Fluid Mechanics, and Mathematics is essential

**Course Objectives:**

This course aims at enabling the students to

1. To understand the application of the heat conduction equation to various geometries with and without heat generation
2. To get conversant with transient analysis of lumped systems.
3. To gain the knowledge of the methods used to determine heat transfer coefficients in natural and forced convection scenarios.
4. To estimate radiative heat transfer between surfaces of simple geometries using basic radiation equations and configurations.
5. To get conversant with methods of design and performance analysis of heat exchangers.

**Course Outcomes:**

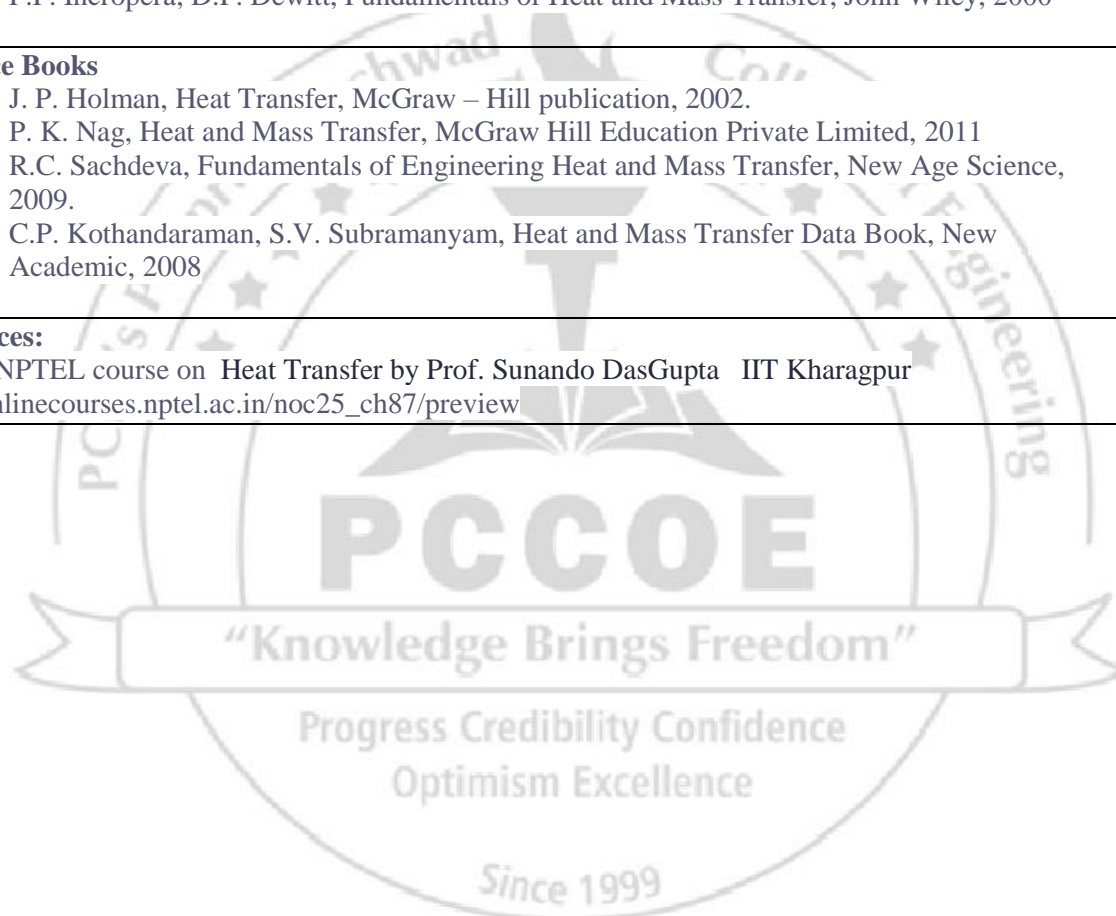

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  |
|----------------|--|
| <b>CO1</b>     | Apply One-Dimensional Heat Conduction equation to simple geometries with appropriate boundary conditions             |
| <b>CO2</b>     | Analyze complex Heat Transfer systems by applying heat conduction principles   |
| <b>CO3</b>     | Solve transient heat conduction problems in engineering systems.   |
| <b>CO4</b>     | Evaluate convective heat transfer coefficients in different flow scenarios using appropriate empirical correlations. |
| <b>CO5</b>     | Calculate radiative heat exchange between surfaces by applying principles of radiation heat transfer                 |
| <b>CO6</b>     | Analyze Heat Exchanger Performance for various flow configurations   |

**Detailed Syllabus**

| <b>Unit No.</b> | <b>Description</b>  | <b>Duration (Hrs.)</b> |
|-----------------|---|------------------------|
|                 | <b>Note: One tutorial on each unit. The tutorial will consist of numerical problems based on real-life or industrial applications.</b>  |                        |
| <b>1</b>        | <b>Fundamentals of Heat Transfer:</b><br>Modes and Laws of heat transfer, thermal conductivity, thermal diffusivity. Boundary and initial Conditions, Introduction to general heat conduction equation in Cartesian coordinates.<br>One dimensional steady state heat conduction with and without heat generation in plane wall, solid cylinder & sphere, with different boundary conditions.   | <b>07 (CO1)</b>        |
| <b>2</b>        | <b>Composite Structures and Extended Surfaces:</b><br>Application Electrical analogy of heat transfer to multi-layered (Composite) structures ,plane wall, hollow cylinder and hollow sphere, thermal contact resistance, critical thickness of insulation, economical and cost consideration. Heat transfer from finned surfaces, types of fins, governing equation for constant cross sectional area fin, solution for infinitely long fin, negligible heat loss from fin tip, Short fins (corrected length), Fin efficiency & effectiveness. | <b>08 (CO2)</b>        |
| <b>3</b>        | <b>Transient heat transfer:</b><br>Validity and criteria of lumped system analysis, Biot and Fourier number, Transient analysis using lumped system analysis, Time constant and response of thermocouple, Transient heat analysis with special effects by using Heisler and Grober charts   | <b>07 (CO3)</b>        |

|   |   |                     |
|---|---|---------------------|
| <b>4</b>  | <b>Convection heat transfer:</b><br>Fundamentals of convection, concept of velocity & thermal boundary layers, local and average heat transfer coefficient, Estimation of heat transfer coefficient using empirical correlations based on dimensionless numbers for the following cases: 1. External Forced Convection 2. Internal Forced Convection and 3. Natural Convection. Thermal analysis of internal forced convection with Constant surface heat flux and constant surface temperature boundary conditions | <b>08<br/>(CO4)</b> |
| <b>5</b>  | <b>Thermal Radiation, Boiling and condensation:</b><br>Fundamentals radiation heat transfer, Different laws of radiation, Radiation shape factor and relations, Radiation heat transfer between black surfaces, Radiation heat transfer between Diffuse Gray surfaces, Radiation Shield. Boiling and condensation: Pool boiling curve, different regimes of boiling heat transfer, critical heat flux, Film and drop wise condensation  | <b>07<br/>(CO5)</b> |
| <b>6</b>  | <b>Heat Exchanger:</b><br>Classification, applications, concept of overall heat transfer coefficient, fouling factor, Heat exchanger analysis using LMTD for parallel flow and counter flow heat exchange, LMTD correction factor for multi-pass and cross flow heat exchangers by using charts, Effectiveness– NTU method for parallel flow heat exchanger and counter flow heat exchanger, use of charts for multi-pass and cross flow heat exchangers selection of heat exchangers.                              | <b>08<br/>(CO6)</b> |
| <b>Total</b>  |   | <b>45</b>           |

| <b>Prior knowledge of Mathematics:</b> Integration and derivatives, Steady flow energy equation,. Concept of boundary layer <b>is essential.</b> |   |                  |                 |              |                          |           |                         |                        |
| <b>Course Objectives:</b>  |   |                  |                 |              |                          |           |                         |                        |
| This course aims at enabling the students to   |   |                  |                 |              |                          |           |                         |                        |
| 1. To experimentally determine the thermal conductivity of different materials   |   |                  |                 |              |                          |           |                         |                        |
| 2. To analyze the temperature distribution and fin efficiency and evaluate numerical results using the Finite Difference Method (FDM)            |   |                  |                 |              |                          |           |                         |                        |
| 3. Analyze external natural and internal forced convection to evaluate the convective heat transfer coefficient.                                 |   |                  |                 |              |                          |           |                         |                        |
| 4. To study radiation heat transfer by determining emissivity and verifying Stefan-Boltzmann law.  |   |                  |                 |              |                          |           |                         |                        |
| 5. To investigate heat transfer in a heat exchanger  |   |                  |                 |              |                          |           |                         |                        |
| 6. To solve transient heat transfer problems   |   |                  |                 |              |                          |           |                         |                        |
| <b>Course Outcomes:</b>  |   |                  |                 |              |                          |           |                         |                        |
| After learning the course, the students will be able to:   |   |                  |                 |              |                          |           |                         |                        |
| <b>Sr. No.</b>   | <b>Course outcome Statement</b>   |                  |                 |              |                          |           |                         |                        |
| <b>CO1</b>   | Estimate experimentally the key heat transfer parameters of different modes of heat transfer                              |                  |                 |              |                          |           |                         |                        |
| <b>CO2</b>   | Analyze the temperature variation of heat transfer systems under steady and transient conditions by experimental methods. |                  |                 |              |                          |           |                         |                        |
| <b>CO3</b>   | Use software / AI tools to analyze temperature variations in different heat transfer systems                              |                  |                 |              |                          |           |                         |                        |
|  |   |                  |                 |              |                          |           |                         |                        |
| <b>List of Experiments</b>   |   |                  |                 |              |                          |           |                         |                        |
| <b>Experiment No.</b>  | <b>Description</b>  |                  |                 |              |                          |           |                         | <b>Duration (Hrs.)</b> |
| <b>Note: 1 to 7 compulsory, any two from 8 to 10 and any 2 from 11 to 13</b>   |   |                  |                 |              |                          |           |                         |                        |
| <b>1</b>   | Determination of Thermal Conductivity of metal rod  |                  |                 |              |                          |           |                         | <b>4</b>               |
| <b>2</b>   | Determination of Thermal Conductivity of insulating powder  |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>3</b>   | Determination of Thermal Conductivity of Composite wall   |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>4</b>   | Determination of Thermal Conductivity of liquid   |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>5</b>   | Analysis of heat transfer and temperature distribution in Natural Convection  |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>6</b>   | Analysis of heat transfer and temperature distribution in Forced Convection   |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>7</b>   | Determination of temperature distribution, fin efficiency in Natural / Forced Convection                                  |                  |                 |              |                          |           |                         | <b>4</b>               |
| <b>8</b>   | Determination of Emissivity of a Test surface   |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>9</b>   | Determination of Stefan Boltzmann Constant  |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>10</b>  | Performance of shell and tube type heat exchanger   |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>11</b>  | Software / AI-based prediction of temperature distribution in heat transfer applications                                  |                  |                 |              |                          |           |                         | <b>4</b>               |
| <b>12</b>  | Analysis of temperature distribution in fins using numerical methods / software tools                                     |                  |                 |              |                          |           |                         | <b>4</b>               |

| <b>Prior knowledge of:</b> Engineering Mechanics, Strength of Materials, Engineering Materials, Theory of Machines, and Manufacturing Technology is essential. |   |  |                 |              |                          |            |                         |                        |
| <b>Course Objectives:</b>  |   |  |                 |              |                          |            |                         |                        |
| This course aims at enabling the students to   |   |  |                 |              |                          |            |                         |                        |
| 1. Learn the fundamental principles of various steps involved in the design process using standard design practices.   |   |  |                 |              |                          |            |                         |                        |
| 2. Acquire knowledge of standards, codes and design practices for selecting appropriate materials  |   |  |                 |              |                          |            |                         |                        |
| 3. Instill design principles to assess machine elements parameters, ensuring functional performance and strength requirements.                                 |   |  |                 |              |                          |            |                         |                        |
| <b>Course Outcomes:</b>  |   |  |                 |              |                          |            |                         |                        |
| After learning the course, the students will be able to:   |   |  |                 |              |                          |            |                         |                        |
|  | <b>Sr. No.</b>  | <b>Course outcome Statement</b>  |                 |              |                          |            |                         |                        |
|  | <b>CO1</b>  | <b>Apply</b> fundamental principles to design machine elements under static loading. |                 |              |                          |            |                         |                        |
|  | <b>CO2</b>  | <b>Analyze</b> the machine components subjected to cyclic loads                      |                 |              |                          |            |                         |                        |
|  | <b>CO3</b>  | <b>Design</b> the shafts, keys, and couplings for real-life applications             |                 |              |                          |            |                         |                        |
|  | <b>CO4</b>  | <b>Design</b> spur gears for the specific applications                               |                 |              |                          |            |                         |                        |
|  | <b>CO5</b>  | <b>Design</b> bolted and welded joints for various loads                             |                 |              |                          |            |                         |                        |
|  | <b>CO6</b>  | <b>Design</b> mechanical springs based on strength and rigidity                      |                 |              |                          |            |                         |                        |
| <b>Detailed Syllabus</b>   |   |  |                 |              |                          |            |                         |                        |
| <b>Unit No.</b>  | <b>Description</b>  |  |                 |              |                          |            |                         | <b>Duration (Hrs.)</b> |
| <b>1</b>   | <b>Design of machine elements against static loading-</b> Design, types of design, design cycle, design considerations, Design for manufacture, design for assembly, preferred number and series, use of standards and code in design, Material selection methods, Design of Knuckle joint, design of axially and eccentrically loaded parts. |  |                 |              |                          |            |                         | <b>07 (CO1)</b>        |
| <b>2</b>   | <b>Design of Machine elements against varying loads-</b> S N Diagram, Endurance limit, endurance strength, and design of components for infinite and finite life under cyclic loading, Design of parts for infinite and finite life under fluctuating stresses based on Soderberg, Goodman diagrams and Gerber parabola.                      |  |                 |              |                          |            |                         | <b>08 (CO2)</b>        |
| <b>3</b>   | <b>Design of Shafts, keys, and couplings</b><br>Design of shafts based on strength and rigidity.<br>Design of Keys, Splines, and Flange Couplings.  |  |                 |              |                          |            |                         | <b>08 (CO3)</b>        |
| <b>4</b>   | <b>Design of Spur Gears</b><br>Design of spur gears- Selection of appropriate gear drive for given application, Fundamental geometric relations, Gear tooth failures, Design based on reversed bending stress fluctuating contact stresses, Gear lubrication.   |  |                 |              |                          |            |                         | <b>08 (CO4)</b>        |
| <b>5</b>   | <b>Design of bolted and welded mechanical joints</b><br>Design of bolted and welded joints against axial and eccentric loads  |  |                 |              |                          |            |                         | <b>07 (CO5)</b>        |
| <b>6</b>   | <b>Design of Mechanical Springs</b><br>Design of helical springs, compound springs, and multi-leaf springs. Surge in springs.   |  |                 |              |                          |            |                         | <b>07 (CO6)</b>        |
| <b>Note: Tutorial on each unit to solve a variety of numerical based on real-life applications</b>   |   |  |                 |              |                          |            |                         |                        |
| <b>Total</b>   |   |  |                 |              |                          |            |                         | <b>45</b>              |

| Prior knowledge of: Engineering Mechanics, CAMD and GD&T, Strength of Materials, Engineering Materials, Theory of Machines, and Manufacturing Technology is essential  |  |                  |                 |              |                          |                         |                           |              |
| <b>Course Objectives:</b><br>This course aims at enabling the students to<br>1. Conduct Problem analysis, define the real-life problem, and provide the solution<br>2. Present the design decisions graphically using modern tools for modelling and drafting. |  |                  |                 |              |                          |                         |                           |              |
| <b>Course Outcomes:</b><br>After learning the course, the students will be able to:  |  |                  |                 |              |                          |                         |                           |              |
| <b>Sr. No.</b>   | <b>Course Outcome Statement</b>  |                  |                 |              |                          |                         | <b>Experiment mapping</b> |              |
| <b>CO1</b>   | Design the mechanical components based on aspects of strength, rigidity, wear, manufacture, assembly, and weight.  |                  |                 |              |                          |                         | 1,2                       |              |
| <b>CO2</b>   | Apply design principles to generate detailed production drawings.  |                  |                 |              |                          |                         | 1                         |              |
| <b>List of Experiments</b>   |  |                  |                 |              |                          |                         |                           |              |
| <b>Experiment No.</b>  | <b>Description</b>   |                  |                 |              |                          |                         | <b>Duration (H)</b>       |              |
| <b>1</b>   | <b>Design Project based on a real-life application</b><br>i. Design of Knuckle joint or Flange Couplings (Limited to design report)<br>ii. Design of Screw Jack / Shaft design for Multi stage/ multi speed gearbox/ Agitator or mixer shaft in chemical plants/ Machine tool spindles.  |                  |                 |              |                          |                         | <b>20</b>                 |              |
| <b>2</b>   | <b>Assignment</b> one is compulsory, and any one of the remaining assignments.<br>I. <b>Selection of Bearing from the manufacturer's catalogue</b><br>II. Select an industrial application where bolted or welded joints are commonly used. Perform a comparative analysis of bolted vs. welded joints for the selected application, considering factors like strength, ease of manufacturing, maintenance, and cost.<br>III. Case study on the design of spur gears for a real-life industrial application.<br>IV. Case study on spring design for any real-life condition where the spring shall sustain higher load and rigidity. |                  |                 |              |                          |                         | <b>10</b>                 |              |
|  |  |                  |                 |              |                          | <b>Total</b>            | <b>30</b>                 |              |
| <b>Note:</b>   |  |                  |                 |              |                          |                         |                           |              |
| <b>i.</b>  | <b>Material selection for the selected design project should be done using AI tool</b>   |                  |                 |              |                          |                         |                           |              |
| <b>ii.</b>   | Design data book shall be used wherever necessary to achieve a selection of standard components leading to a minimum cost of the product being developed.  |                  |                 |              |                          |                         |                           |              |
| <b>iii.</b>  | Submit a detailed design report including problem selection, analysis, definition, and a solution based on all relevant design considerations. Provide a summary with final part dimensions, a leaflet with product specifications, cost details, and user instructions.   |                  |                 |              |                          |                         |                           |              |
| <b>iv.</b>   | Submit a 2D part drawing with two views, including one sectional view to reveal internal features. Ensure  |                  |                 |              |                          |                         |                           |              |

|  |  |
|--|--|
|  | the representation of geometric and dimensional tolerances, surface roughness symbols, and additional instructions like surface coating and heat treatments.   |
| v.   | Create a 2D assembly drawing with two views, including one sectional view to show internal features. Include overall dimensions, centre distances, and alignment dimensions for proper assembly. Indicate fit locations, and provide a Bill of Materials (BOM) |

**Prior knowledge of** Fundamental concepts of thermodynamic, Laws of thermodynamic, Use of steam tables and Mollier chart, Ideal Gas Equations and processes is essential

**Course Objectives:**

This course aims at enabling the students to

1. To understand the theory and performance calculations of reciprocating air compressors
2. To understand the performance evaluation of boilers
3. To study various thermodynamic cycles with gas and steam as working medium
4. To get familiar with the characteristics of compressible fluid flow
5. To explore contemporary research trends and advancements in applied thermodynamics.

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | <b>Experimentally Analyze</b> the performance of the Reciprocating Air Compressor.              |
| <b>CO2</b>     | <b>Estimate</b> the performance of the boiler.  |
| <b>CO3</b>     | <b>Analyze</b> steady one-dimensional isentropic compressible fluid flow.                       |
| <b>CO4</b>     | <b>Use</b> software tools to do parametric analysis of thermal systems and cycles               |
| <b>CO5</b>     | <b>Apply</b> the principles of thermal engineering to understand the working of thermal systems |

**List of Experiments**

| <b>Experiment No.</b>   | <b>Description</b>  | <b>Duration (H)</b> |
|---|---|---------------------|
| Experiment number 1 ,5,13 compulsory, any two from 2 to 4, any two from 6 to 8 and any 2 from 9 to 12 |   |                     |
| <b>1</b>  | Trial on reciprocating Air compressor to determine <ul style="list-style-type: none"> <li>• Volumetric efficiency</li> <li>• Isothermal Efficiency</li> <li>• Heat rejected in the intercooler</li> </ul>   | <b>4</b>            |
| <b>2</b>  | Determination of Calorific Value of Solid/ Gaseous Fuel   | <b>2</b>            |
| <b>3</b>  | Study and demonstration of various types of boilers and their application   | <b>2</b>            |
| <b>4</b>  | Demonstration of Boiler Mounting and Accessories  | <b>2</b>            |
| <b>5</b>  | Trial on Boiler to determine <ul style="list-style-type: none"> <li>• Efficiency with and without economizer</li> <li>• Equivalent Evaporation Rate</li> <li>• Heat Balance Sheet</li> </ul>  | <b>4</b>            |
| <b>6</b>  | Analysis of the Rankine cycle using EES or any suitable software to investigate <ul style="list-style-type: none"> <li>• Effect of superheat</li> <li>• Boiler and condenser pressure on the performance of the Rankine cycle</li> <li>• Deciding the maximum pressure of the boiler</li> </ul> | <b>4</b>            |
| <b>7</b>  | Analysis of the Brayton cycle using EES or any suitable software to investigate <ul style="list-style-type: none"> <li>• Effect of pressure ratio</li> <li>• Reheat and regeneration</li> </ul>   | <b>4</b>            |

|              |   |           |
|--------------|---|-----------|
| <b>8</b>     | Analysis of compressible fluid flow by using EES or any suitable software <ul style="list-style-type: none"> <li>Study of mass, momentum and energy equation for generating Fanno lines</li> <li>Generation of Fanno line using software tools</li> </ul> | <b>4</b>  |
| <b>9</b>     | Demonstration of Jaggery plant using thermic fluid  | <b>2</b>  |
| <b>10</b>    | Demonstration of steam generation by solar energy   | <b>2</b>  |
| <b>11</b>    | Demonstration of solar air dryer with phase change material   | <b>2</b>  |
| <b>12</b>    | Demonstration of Compressible fluid flow through convergent- Divergent Nozzle   | <b>2</b>  |
| <b>13</b>    | A case study on AI applications in Thermal Systems  | <b>4</b>  |
| <b>Total</b> |   | <b>30</b> |

| <b>Prior knowledge of:</b> Basic manufacturing processes, Basic mechanical components is essential                          |  |                  |                 |              |                          |            |                         |                        |
| <b>Course Objectives:</b>   |  |                  |                 |              |                          |            |                         |                        |
| This course aims at enabling the students to  |  |                  |                 |              |                          |            |                         |                        |
| 1. Give a broad understanding of conventional machining processes with an emphasis on the mechanics of machining.           |  |                  |                 |              |                          |            |                         |                        |
| 2. Familiarize with the design of jigs, fixtures, and scientific principles governing various advanced machining processes. |  |                  |                 |              |                          |            |                         |                        |
| <b>Course Outcomes:</b>   |  |                  |                 |              |                          |            |                         |                        |
| After learning the course, the students will be able to:  |  |                  |                 |              |                          |            |                         |                        |
| <b>Sr. No.</b>  | <b>Course outcome Statement</b>  |                  |                 |              |                          |            |                         |                        |
| <b>CO1</b>  | <b>Evaluate</b> the influence of machining parameters.   |                  |                 |              |                          |            |                         |                        |
| <b>CO2</b>  | <b>Determine</b> the process parameters for Turning and Milling operations.  |                  |                 |              |                          |            |                         |                        |
| <b>CO3</b>  | <b>Explain</b> the fundamentals of Drilling and Broaching operations.  |                  |                 |              |                          |            |                         |                        |
| <b>CO4</b>  | <b>Analyze</b> the performance of grinding and super-finishing processes.  |                  |                 |              |                          |            |                         |                        |
| <b>CO5</b>  | <b>Design</b> Jigs / fixtures for a machining and assembly of components.  |                  |                 |              |                          |            |                         |                        |
| <b>CO6</b>  | <b>Select</b> the appropriate advance machining process as per the application under consideration.  |                  |                 |              |                          |            |                         |                        |
| <b>Detailed Syllabus</b>  |  |                  |                 |              |                          |            |                         |                        |
| <b>Unit</b>   | <b>Description</b>   |                  |                 |              |                          |            |                         | <b>Duration (Hrs.)</b> |
| <b>1</b>  | <b>Mechanics of Machining Process</b><br>Tool geometry and tool designation, mechanism of chip formation, heat generation and cutting tool temperature, cutting forces, Merchant’s analysis, tool life and machinability, tool materials, tool inserts, tool wear and failure, cutting fluids  |                  |                 |              |                          |            |                         | <b>08 (CO1)</b>        |
| <b>2</b>  | <b>Turning and Milling</b><br>Lathe and Milling machine: types, construction, and cutting operations, Gear manufacturing, indexing mechanism, vibration and chatter in machining, evaluation of process parameters, machining time and material removal rate calculation.  |                  |                 |              |                          |            |                         | <b>07 (CO2)</b>        |
| <b>3</b>  | <b>Drilling and Broaching</b><br>Drilling machines: types, construction and kinematics; Drills, Reaming and reamers, Tapping and taps, Boring; Design considerations for drilling, reaming, and tapping. Broaching: principle, broach tool: construction, functioning, properties, material, tool geometry, selection of broach tool and broaching machines.             |                  |                 |              |                          |            |                         | <b>07 (CO3)</b>        |
| <b>4</b>  | <b>Grinding and Super finishing</b><br>Principle, interactions, relation between cutting force, cutting velocity, and critical grit depth of cut, analysis of grinding, specific energy vs. material removal rate, grinding wheel: composition, type, specification, wheel/chip loading, balancing, dressing. Finishing processes – honing, lapping and super finishing. |                  |                 |              |                          |            |                         | <b>08 (CO4)</b>        |
| <b>5</b>  | <b>Jigs and Fixtures</b><br>Design of Jigs and Fixtures: Principles and applications, elements of location and clamping. Types of jigs and fixtures. Tool guidance (bushes/setting block) and body construction. Design of jigs and fixtures for drilling, turning and milling bushes.   |                  |                 |              |                          |            |                         | <b>07 (CO5)</b>        |

|   |   |                     |
|---|---|---------------------|
| <b>6</b>  | <b>Advanced Machining Processes</b><br>Principles and applications of: Abrasive Jet Machining, Water Jet Machining, Electrical Discharge Machining, Laser Beam Machining, Chemical Machining, Electrochemical Machining, Ultrasonic Machining, Electron Beam Machining. Effect of process parameters on material removal rate, surface roughness and power consumption. Micromachining. | <b>08<br/>(CO6)</b> |

**Prior knowledge of** Trigonometry, hand tools and accessories, basic manufacturing processes, basic mechanical components is essential

**Course Objectives:**

This course aims at enabling the students to

1. To impart knowledge on cutting tool design, tool life evaluation, and regrinding processes along with experimental studies on conventional and advanced machining processes.
2. To enable students to design cutting tools, jigs, and fixtures for machining applications and analyze the effect of machining parameters through hands-on experiments and industrial visits

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  | <b>Experiment No.</b> |
|----------------|--|-----------------------|
| <b>CO1</b>     | <b>Analyze and evaluate</b> the performance characteristics of various machine tools.  | 1,2,3                 |
| <b>CO2</b>     | <b>Design and develop</b> tooling solutions for machining processes, including the design of cutting tools, fixtures (drilling, milling, and turning). | 4,5                   |
| <b>CO3</b>     | <b>Understand</b> the working principle of advanced machining processes.   | 6,7,8,9               |

**List of Experiments**

| <b>Experiment No.</b> | <b>Description</b> | <b>Duration (Hrs.)</b> |
|-----------------------|--------------------|------------------------|
|-----------------------|--------------------|------------------------|

**Note: Experiment one is compulsory. Perform any seven out of remaining.**

|              |  |           |
|--------------|--|-----------|
| <b>1</b>     | Regrinding or re-sharpening of single point cutting tool on Pedestal Grinder or Tool and Cutter Grinder. | <b>2</b>  |
| <b>2</b>     | Evaluate the Tool Life and material removal rate on any Machine Tools.                                   | <b>4</b>  |
| <b>3</b>     | Determine the effect of grinding parameters on surface finish.   | <b>4</b>  |
| <b>4</b>     | Design of Cutting tools: Turning Tool/Milling Cutter/Twist Drill/Reamer/Broach and Form Tool.            | <b>4</b>  |
| <b>5</b>     | Design and draw a drilling Jig, milling fixture and turning fixture.                                     | <b>4</b>  |
| <b>6</b>     | Job preparation using Laser machining for acrylic or plywood material.                                   | <b>4</b>  |
| <b>7</b>     | Study of process parameters on ECM/PCM setup.  | <b>4</b>  |
| <b>8</b>     | Demonstration of micromachining experimental setup and understanding the process parameters.             | <b>4</b>  |
| <b>9</b>     | Industry visit to plant having Advanced Machining Processes.   | <b>4</b>  |
| <b>Total</b> |  | <b>30</b> |

**Prior knowledge of:** Fluid mechanics, physics is essential

**Course Objectives:**

This course aims at enabling the students to

- 1 To analyze the performance of the pump for the hydraulic system
- 2 To demonstrate the various fluid power components and different circuits using a hydraulic trainer
- 3 To test the hydraulic actuator/ pressure relief valve for the hydraulic system
- 4 To design a fluid power system for any hydraulic/pneumatic application

**Course Outcomes:**

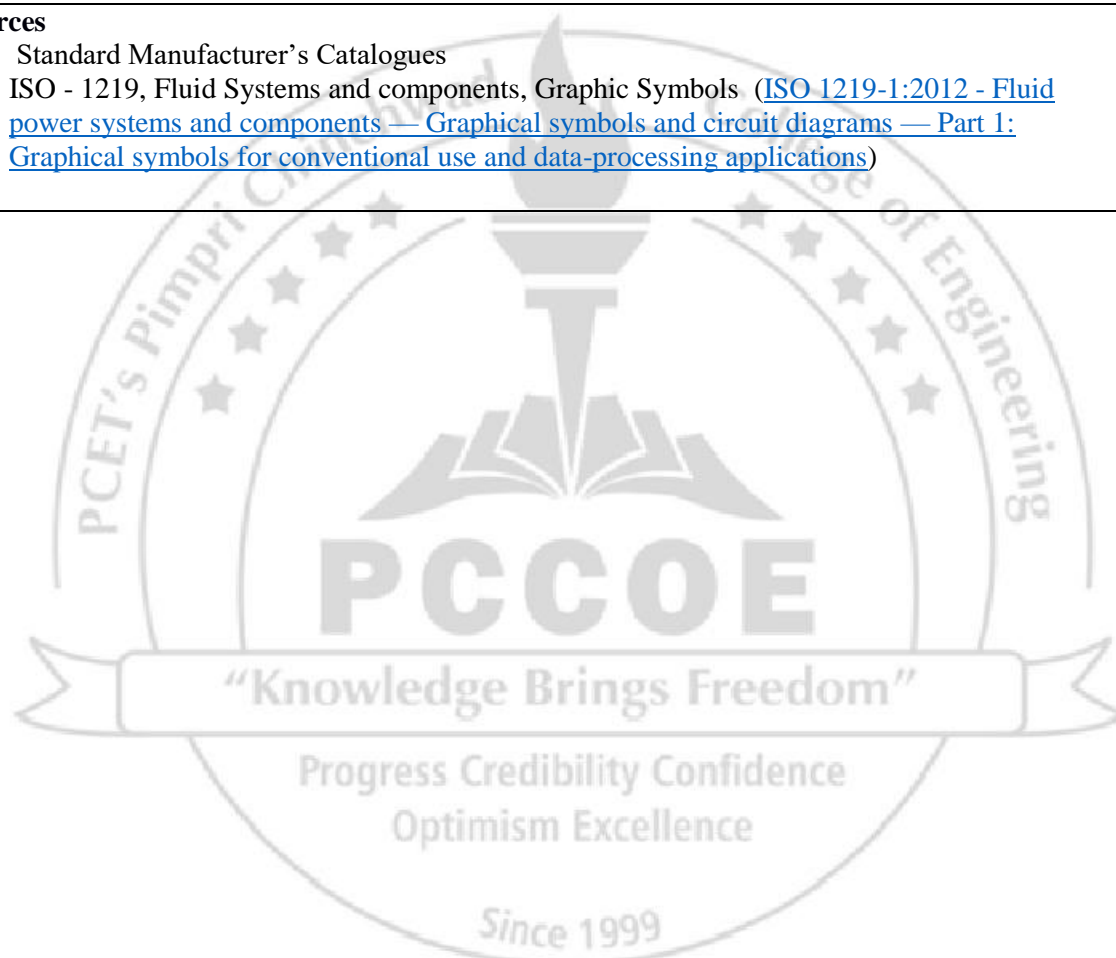

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | Estimate the hydraulic pump performance under different loading conditions  |
| <b>CO2</b>     | Demonstration of different hydraulic/pneumatic system components  |
| <b>CO3</b>     | Testing of hydraulic actuator/ pressure relief valve for hydraulic/pneumatic system using a simulation tool like Automation Studio software |
| <b>CO4</b>     | Design and simulate the Hydraulic and pneumatic circuits using Automation Studio software   |

**List of Experiments**

| <b>Experiment No.</b> | <b>List of Experiments (Compulsory 1,3,5,6,7,8, Any 1 from 2 and 4 , any 2 from 9,10,11)</b>  | <b>Duration (Hrs.)</b> |
|-----------------------|---|------------------------|
| <b>1</b>              | Test the Gear pump and plot its performance characteristics   | 4                      |
| <b>2</b>              | Test on pressure relief valve/flow control valve using software such as Automation Studio   | 2                      |
| <b>3</b>              | Following experiments to be done on hydraulic trainer / using software such as Automation Studio (any 3)<br>a) Regenerative circuit<br>b) Speed control circuit<br>c) Sequencing circuit<br>d) Traverse and feed circuit etc.   | 4                      |
| <b>4</b>              | Test on linear /rotary actuator   | 2                      |
| <b>5</b>              | Following experiments to be done on pneumatic trainer// using software such as Automation Studio (any 3)<br>a) Automatic reciprocating circuit<br>b) Speed control circuit<br>c) Pneumatic circuit involving a Shuttle valve/ Quick exhaust valve / Two-pressure valve<br>d) Electro-pneumatic circuits | 4                      |
| <b>6</b>              | Design of simple hydraulic systems used in practice using manufacturers' catalogue and analysis using software such as Automation Studio  | 4                      |
| <b>7</b>              | Design of simple pneumatic systems used in practice using manufacturers' catalogues and analysis using software such as Automation Studio   | 4                      |
| <b>8</b>              | Industrial visit to study Hydraulic / Pneumatic-based Automation systems  | 2                      |

|  |   |           |
|--|---|-----------|
| <b>9</b>   | Assignment 1: Symbols for different components as per standards   | <b>2</b>  |
| <b>10</b>  | Assignment 2: Troubleshooting procedures in a hydraulic system  | <b>2</b>  |
| <b>11</b>  | Assignment 3: Standard specifications of hydraulic/ pneumatic components using manufacturer's catalogues. | <b>2</b>  |
| <b>Total</b>   |   | <b>30</b> |

**Prior knowledge of:** Theory of Machines is essential.

**Course Objectives:**

This course aims at enabling the students to

1. To evaluate different power transmission systems such as belt drives, chain drives, gear drives, shaft, and couplings.
2. Select appropriate mechanical power transmission components based on load, speed, and efficiency requirements.
3. Apply industry standards, safety guidelines, and best practices in mechanical power transmission applications.

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  |
|----------------|--|
| <b>CO1</b>     | <b>Select</b> flat belt and V belt from manufacturer's catalogue for any application                         |
| <b>CO2</b>     | <b>Design</b> the friction clutches and brakes for automotive applications                                   |
| <b>CO3</b>     | <b>Design</b> the Helical and Bevel gears for real life applications   |
| <b>CO4</b>     | <b>Select</b> suitable Worm gear pair for any application and Select the chain from manufacturer's catalogue |
| <b>CO5</b>     | <b>Analyse</b> a power split device suitable for HEV and EVs.  |

**Detailed Syllabus**

| <b>Unit</b>  | <b>Description</b>   | <b>Duration (Hrs.)</b> |
|--------------|--|------------------------|
| <b>1</b>     | Belt drives: Selection of Flat belt from manufacturer's catalogue, Selection of V Belt from manufacturer's catalogue   | <b>09 (CO1)</b>        |
| <b>2</b>     | Design of Clutch and Brake: Design of single, multi plate clutch, heat generated during slip period, Design of drum and disc brakes  | <b>09 (CO2)</b>        |
| <b>3</b>     | Helical and Bevel gear design: Design of helical and bevel gears against bending and pitting   | <b>09 (CO3)</b>        |
| <b>4</b>     | Design of lifting machinery: Worm gears- Selection of worm gears and checking suitability using strength rating, wear rating and thermal rating as per IS 7443 (2002). -Selection of chain from manufacturer's catalogue | <b>09 (CO4)</b>        |
| <b>5</b>     | Transmission in Hybrid Electric Vehicle and Electric Vehicle: Design of power split devices.   | <b>09 (CO5)</b>        |
| <b>Total</b> |  | <b>45</b>              |

**Prior knowledge** of basic mathematics is essential

**Course Objectives:**

This course aims at enabling the students to

1. To understand the fundamentals of Business Intelligence, Decision support system and BI Infrastructure.
2. To understand Data preprocessing and Data warehousing techniques to provide solutions to the real time BI problems.
3. Business and Data Analytics techniques for solving BI problems.
4. To learn Modern tools for BI applications

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | Demonstrate the role of Business Intelligence in Decision Support System. |
| <b>CO2</b>     | Apply the data pre-processing techniques to solve BI problems.            |
| <b>CO3</b>     | Apply Data Analytics Life Cycle for Business Intelligence Application.    |
| <b>CO4</b>     | Use modern analytical tools to develop BI applications                    |

**Detailed Syllabus**

| <b>Unit</b>  | <b>Description</b>   | <b>Duration (Hrs.)</b> |
|--------------|--|------------------------|
| <b>1</b>     | <b>Introduction:</b> Introduction, Defining BI Cycle, BI Environment and Architecture, Role of Mathematical model in BI, Factors Responsible for successful BI Project.<br><b>Decision Support System:</b> Structure and Development of Decision Support System (DSS), Role of Business Intelligence in DSS, Managing BI operations for business continuity  | <b>07</b>              |
| <b>2</b>     | <b>Data Preprocessing and Data Warehousing :</b> Data preparation, Preprocessing requirements, data cleaning, data integration, data reduction, data transformation, Data discretization and concept hierarchy generation; Data warehouse Modeling, data warehouse design, Distributed data warehouse, and materialized view.  | <b>08</b>              |
| <b>3</b>     | <b>Business Data Analytics:</b> Data analytics, business analytics, Data Analytics life cycle, Data Mining techniques for Business Analytics<br><b>BI Metrics &amp; Pattern Visualization:</b> Metrics for performance evaluation: Accuracy, Error Rate, precision, Recall, F-measure, Sensitivity, Specificity, BI metrics on Dashboard, Need of Visualization, Pattern visualization tools and techniques (Tableau or PowerBI) | <b>08</b>              |
| <b>4</b>     | <b>BI Tools and Applications:</b> Analytical Tools for Business Intelligence, Case studies: WEKA, KNIME, Rapid Miner, BI applications: ERP and Business Intelligence, BI Applications in CRM, BI Applications in Marketing, Finance, Banking, Fraud Detection.   | <b>07</b>              |
| <b>Total</b> |  | <b>30</b>              |

**About the Course :**

This course introduces the ethical dimensions of engineering and artificial intelligence (AI), helping students make responsible decisions in technology design and practice. It explores real-world dilemmas, sustainability challenges, and global regulatory perspectives to prepare future engineers for ethical leadership in an AI-driven world.

**Prior knowledge of :**None

**Course Objectives:**

This course aims to

1. Develop an understanding of ethical principles, professional conduct, and responsibilities in engineering and artificial intelligence (AI) practices.
2. Adapt the ability to identify and apply ethical frameworks for decision-making in research, AI system design, intellectual property, and sustainable engineering activities.
3. Create awareness of environmental ethics, sustainability principles, and the societal impacts of engineering and AI-based technological advancements.
4. Promote a global and culturally inclusive perspective on ethical issues, focusing on regulatory frameworks and the role of engineers in addressing contemporary challenges related to AI governance and sustainable development.

**Course Outcomes:**

The students will be able to,

| <b>Sr. No.</b> | <b>Course outcome statement</b>  |
|----------------|--|
| <b>CO1</b>     | Understand fundamental ethical principles and professional responsibilities related to engineering, artificial intelligence (AI), and emerging technologies.   |
| <b>CO2</b>     | Apply ethical frameworks and decision-making models to analyze dilemmas involving AI systems, research practices, intellectual property, and sustainable engineering solutions.                                    |
| <b>CO3</b>     | Evaluate the environmental and societal impacts of engineering and AI technologies, and promote sustainable and responsible innovations aligned with ethical standards.  |
| <b>CO4</b>     | Demonstrate awareness of global, cultural, and regulatory perspectives in professional practice, with an emphasis on ethics in AI governance, sustainability initiatives, and inclusive technological development. |

**Detailed Syllabus**

| <b>Unit</b> | <b>Description</b>  | <b>Duration (Hrs.)</b> |
|-------------|---|------------------------|
| <b>1</b>    | <b>Foundations of Professional Ethics and Emerging Technologies</b><br>Role of ethics in engineering and AI; moral autonomy; types of ethics; professional responsibilities in AI-driven world; ethical theories (utilitarianism, deontology, virtue ethics) with practical case studies.   | <b>8</b>               |
| <b>2</b>    | <b>Ethical Decision-Making, AI Ethics, and Research Practices</b><br>Frameworks for ethical decision-making (with AI case examples); analyzing dilemmas; stakeholder responsibilities; ethical considerations in AI model development (bias, fairness, accountability); ethical issues in research, intellectual property, and emerging technologies. | <b>8</b>               |
| <b>3</b>    | <b>Sustainability, Environmental Ethics, and Social Responsibility</b><br>Introduction to sustainability in engineering; ethical resource management; circular economy; environmental impact of AI technologies; social justice, health, and safety responsibilities in sustainable design; role of engineers in building sustainable futures.        | <b>7</b>               |

|   |   |           |
|---|---|-----------|
| <b>4</b>  | <b>Global, Cultural, and Regulatory Perspectives in AI and Sustainability</b><br>Ethical issues in global engineering projects; cultural perspectives on technology adoption; diversity, equity, and inclusion in AI; international regulations and governance of AI (GDPR, AI Act, IEEE standards); sustainability goals (SDGs) in a global context. | <b>7</b>  |
| <b>Total</b>  |   | <b>30</b> |

**Prior knowledge of**

- Electronics and electrical engineering
- Basic programming concepts **is essential.**

**Course Objectives:**

- Equip students with a comprehensive understanding of ADAS technologies.
- Enable students to evaluate and apply sensor technologies.
- Foster proficiency in integrating embedded systems and real-time data processing.
- Prepare students to design and implement testing strategies for ADAS

**Course Outcomes:**

After learning the course, the students should be able to:

| <b>Sr. No.</b> | <b>Course Outcome Statement</b>  |
|----------------|--|
| <b>CO1</b>     | Analyze the role of ADAS in vehicle safety and automation.                     |
| <b>CO2</b>     | Evaluate sensor technologies and sensor fusion methods for ADAS functionality. |
| <b>CO3</b>     | Apply embedded system concepts and real-time processing in ADAS.               |
| <b>CO4</b>     | Create testing strategies for ADAS using V2X communication.                    |

**Detailed Syllabus:**

| <b>Unit</b>  | <b>Description</b>  | <b>Duration [Hrs.]</b> |
|--------------|---|------------------------|
| 1            | <b>Overview of ADAS and Core Functionalities:</b><br>Introduction to ADAS, importance of ADAS in vehicle safety, ADAS levels of automation, sensor technologies in ADAS, lane-keeping assist, adaptive cruise control, automatic emergency braking, collision avoidance, parking assist, and traffic sign recognition.  | <b>07 (CO1)</b>        |
| 2            | <b>Sensor Technologies and Sensor Fusion in ADAS:</b><br>Types of sensors used in ADAS, principles of sensor operation, sensor fusion for enhanced ADAS functionality, challenges of sensor calibration, sensor performance in various conditions, sensor integration with vehicle control systems.   | <b>08 (CO2)</b>        |
| 3            | <b>Embedded Systems and Real-Time Data Processing in ADAS:</b><br>Role of embedded systems in ADAS, microcontroller architectures for ADAS, real-time operating systems for data processing, system integration and communication between ECUs, decision-making algorithms, embedded software for ADAS, fault detection and self-diagnostics in ADAS systems.       | <b>07 (CO3)</b>        |
| 4            | <b>Vehicle-to-Everything (V2X) Communication and Testing ADAS:</b><br>Introduction to V2X communication (Vehicle-to-Vehicle, Vehicle-to-Infrastructure, Vehicle-to-Pedestrian), V2X communication protocols, integration of V2X with ADAS, testing methodologies for ADAS, validation of sensor fusion algorithms, ethical concerns, regulatory standards for ADAS. | <b>08 (CO4)</b>        |
| <b>Total</b> |   | <b>30</b>              |

**Prior knowledge of** Understanding of design thinking and planning is essential.

**Course Objectives:**

This course aims at enabling students:

1. To introduce the fundamental concepts and various types of digital marketing.
2. To familiarize students with different social media advertising platforms and their role in effective digital marketing campaigns.
3. To equip students with essential skills to implement Search Engine Optimization (SEO) technique.
4. To provide an understanding of E-commerce principles and business models, and to develop the ability to apply E-marketing techniques in digital environments

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statements</b>   |
|----------------|--|
| <b>CO1</b>     | Understand the different types of Digital Marketing.                               |
| <b>CO2</b>     | Learn social media advertising platforms for digital marketing campaigns.          |
| <b>CO3</b>     | Apply the fundamental principles and concepts of Search Engine Optimization (SEO). |
| <b>CO4</b>     | Apply e-commerce and e-marketing concepts in Business Models                       |

**Detailed Syllabus**

| <b>Unit</b>  | <b>Description</b>   | <b>Duration (H)</b> |
|--------------|--|---------------------|
| <b>1</b>     | <b>Types of Digital Marketing</b><br>Digital Marketing – The concept, Digital Marketing Types : Mobile Marketing, Online Marketing, Email Marketing,   | <b>6 (CO1)</b>      |
| <b>2</b>     | <b>Digital marketing using social media</b><br>Consumer Generated Contents (CGC), Impact of Social Media, Advantages and Disadvantages of Social Media, Types of Social Media, Social Media Marketing using Instagram, Snap Chat, Twitter and LinkedIn   | <b>8 (CO2)</b>      |
| <b>3</b>     | <b>Search Engine Optimization (SEO)</b><br>Search Engine Optimization Basics, Keyword Research, SEO Tool- SEMrush: Overview and Features, Top Search Engine Ranking Factors.<br>Case Study: Dominos India: Building Traffic through content propagation.   | <b>8 (CO3)</b>      |
| <b>4</b>     | <b>E-commerce Business Models &amp; E-marketing</b><br>E-commerce: Meaning, Benefits and limitations, Business Models for E-commerce: Business-to-Consumer (B2C), Business-to-Business(B2B), Consumer-to-Consumer (C2C), Consumer To-Business (C2B).<br>Case Study: Revenue sources at YouTube<br>Traditional Marketing Vs. E-Marketing, Impact of E-commerce on markets, Issues in E-Marketing Case Study: Create an own business EC model example -Shopify | <b>8 (CO4)</b>      |

|         | Lecture  | Practical | Tutorial | Other | FA                          |     | SA              | Total |
|         |  |           |          |       | FA1                         | FA2 |                 |       |
| 2       | 2  | -         | -        | -     | 10                          | 10  | 30              | 50    |

**Prior Knowledge of Computer Network Fundamentals is essential.**

**Course Objectives:**

1. To learn the fundamentals of cloud computing.
2. To know the emergence of cloud as the next generation computing paradigm.

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course Outcome Statement</b>                     |
|----------------|---|
| <b>CO1</b>     | Explore the basic terminologies in cloud computing  |
| <b>CO2</b>     | Categorize cloud service models and their utilities |
| <b>CO3</b>     | Demonstrate cloud security mechanisms and policies  |
| <b>CO4</b>     | Examine common standard in cloud computing          |

**Detailed Syllabus**

| <b>Unit</b> | <b>Description</b>  | <b>Duration (Hrs.)</b> |
|-------------|---|------------------------|
| <b>1.</b>   | <b>Fundamentals of Cloud Computing</b><br>Computer Network Fundamentals : OSI Reference Model, Computer Network architecture Origin and Influences of Cloud Computing - History, definitions, technology innovations; Cloud Computing terminologies, Applications, benefits and limitations, risk and challenges, roles and boundaries, cloud characteristics, Cloud Delivery Models, cloud Deployment Models.      | <b>7 (CO1)</b>         |
| <b>2.</b>   | <b>Cloud Service and Platforms</b><br>Software as a Service, Platform as a Service, Infrastructure as a Service, Database as a Service, Monitoring as a Service, Communication as services, Service providers: Google Cloud platform, Microsoft Azure Service Platform, Amazon EC2, Salesforce, IBM.  | <b>7 (CO2)</b>         |
| <b>3.</b>   | <b>Cloud Enabling Technology and Cloud Security</b><br>Broadband Networks and Internet Architecture, Data Centre Technology, Virtualization Technology, Web Technology, Multitenant technology, Service Technology, Cloud Security: Confidentiality, Integrity, Authenticity, availability, Vulnerability, Security Control, Security Mechanisms, Security Policies. Case study on Identity Access Management (IAM) | <b>8 (CO3)</b>         |
| <b>4.</b>   | <b>Common Standards in Cloud Computing</b><br>Open Cloud Consortium- Open Virtualization Format, Working of Virtualization system, Types of Virtualization, Benefits of Virtualization, Standards for Application Developers-browsers, data and solution Stack; Standards for Messaging- SMTP, POP, IMAP, RSS, HTTP; Standards for Security- Security (SAML OAuth, OpenID, SSL /TLS).                               | <b>8 (CO4)</b>         |
|             | <b>Total</b>  | <b>30</b>              |

**Prior knowledge of is not essential.**

**Course Objectives:**

This course aims at enabling students,

1. Introduce engineers to key psychological principles relevant to personal and professional development.
2. Understand human behavior, cognition, and emotion to improve interpersonal effectiveness and Team work.
3. Develop skills to integrate psychological insights into problem-solving and innovation.
4. Foster ethical decision-making and leadership through Emotional Intelligence.

**Course Outcomes:**

After learning the course, the students should be able to:

| <b>Sr. No.</b> | <b>Course Outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | Understand fundamental psychological concepts and their engineering applications. |
| <b>CO2</b>     | Understand the theories of cognitive works  |
| <b>CO3</b>     | Apply psychological principles to improve teamwork and leadership.                |
| <b>CO4</b>     | Integrate human-centered approaches in engineering design and problem-solving.    |

**Detailed Syllabus:**

| <b>Unit</b>  | <b>Description</b>   | <b>Duration [Hrs.]</b> |
|--------------|--|------------------------|
| 1            | <b>Introduction to Engineering Psychology</b><br>History of Engineering Psychology, Methods of Engineering Psychology<br>Perspective on Engineering Psychology-Human-Centric Design, Balance in Cognitive Load, Ethical & Sustainable Technology, Holistic Decision-Making:  | <b>08 (CO1)</b>        |
| 2            | <b>Design of Cognitive Work-1</b><br>Attention Vigilance and Fatigue<br>Information Processing<br>Training and Automaticity<br>Stress and Workload<br>Displays, Monitors, and Screens<br>Usability<br>Teams and Performance  | <b>08 (CO2)</b>        |
| 3            | <b>Design of Cognitive Work-2</b><br>Situation Awareness<br>Emotion, Motivation, and Boredom<br>Decision-Making and Expertise<br>Language and Artificial Intelligence  | <b>07 (CO3)</b>        |
| 4            | <b>Importance of EI for engineering professionals</b><br>Components of EI (as per Goleman's Model)<br>Daniel Goleman's Model (Five components: Self-awareness, Self-regulation, Motivation, Empathy, Social skills)<br>Role of EI in team collaboration, leadership, and conflict resolution<br>Applications of EI in decision-making and problem-solving<br>Examples of high-EI engineering leaders<br>Developing Emotional Intelligence- Techniques for enhancing self-awareness and empathy, Managing emotions under stress | <b>07 (CO4)</b>        |
| <b>Total</b> |  | <b>30</b>              |

**Prior knowledge of:** Basic mechanical components, Geometric Dimensioning and Tolerances, Manufacturing processes, Trigonometry, Statistics is essential

**Course Objectives:**

This course aims at enabling the students to

1. Use and apply various metrology instruments / gauges / calibration and advanced metrological methods and systems of measurement and inspection for determining geometrical and dimensional measurements.
2. Select and apply appropriate Quality Control Technique, Quality Management Tool and suggest appropriate Quality Management System (QMS) for given application.

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | Interpret fundamentals of measurement and design limit gauges.                      |
| <b>CO2</b>     | Compare and select appropriate measuring instruments for complex engineering parts. |
| <b>CO3</b>     | Apply Quality Control Techniques and TQM for real life problems.                    |
| <b>CO4</b>     | Use Statistical Control Techniques to analyze process capability.                   |

**Detailed Syllabus**

| <b>Unit</b> | <b>Description</b>  | <b>Duration (Hrs.)</b> |
|-------------|---|------------------------|
| <b>1</b>    | <b>Measurement Standards and Design of Gauges</b><br><b>Measurement Standards:</b> Introduction, Precision, Accuracy, Errors in Measurement, Calibration, Abbe's principle, Types and sources of errors<br>Linear Measurement: Standards, Line Standard, End Standard, Wavelength Standard, awareness on various global standards.<br><b>Design of Gauges:</b> Taylor's principle, Wear allowance on gauges, Types of gauges-plain plug gauge, ring gauge, snap gauge, limit gauge and gauge materials, Considerations of gauge design (Numerical treatment on Gauge Design).   | <b>08 (CO1)</b>        |
| <b>2</b>    | <b>Comparators, Thread Metrology Gear Metrology, Surface Roughness Measurement and Interferometry</b><br><b>Comparators:</b> Types Comparators, Uses, Advantages and Disadvantages of various types of Comparators.<br><b>Thread Metrology:</b> Screw Thread terminology, Gear Terminology, Errors in Thread.<br><b>Gear Metrology:</b> Gears, Measurement of Minor, Major and Effective diameter (Two Wire Method), Constant chord, Base tangent and Numerical treatment, Gear Rolling Tester.<br><b>Surface Roughness Measurement:</b> Introduction to Surface roughness, Meaning of RMS and CLA values, Surface roughness measuring instrument: TalySurf and Tomlison's Surface Meter.<br><b>Interferometry:</b> Introduction, Working Principle and applications of NPL Interferometer, Laser Interferometry. | <b>08 (CO2)</b>        |
| <b>3</b>    | <b>Introduction to Quality, Quality Tools and Total Quality Management</b><br>Concept of Quality: Meaning of Quality, Quality of Product, Quality of Service, Cost of Quality, Types of audits ISO, IATF etc.<br>Difference between Inspection, Quality Control and Quality Assurance. Deming's cycles & 14 Points, Old and New Seven Tools, Case studies on transformation done through TQM, Corrective Action and Preventive Action report filling technique.   | <b>07 (CO3)</b>        |

|   |  |                     |
|---|--|---------------------|
| <b>4</b>  | <b>Statistical Quality Control</b><br>Statistical concept, Frequency diagram, Control Chart for Variable (X & R Chart) & Attribute (P & C Chart), Statistical Process Control (Numerical). Acceptance Sampling: Sampling Inspection, OC Curve and its characteristics, sampling methods, Sampling Plan: Single, Double (Numerical), AOQ. | <b>07<br/>(CO4)</b> |
| <b>Total</b>  |  | <b>30</b>           |

**Prior knowledge of:** Basic mechanical components, Geometric Dimensioning and Tolerances, Manufacturing processes, Trigonometry, Statistics is essential

**Course Objectives:**

This course aims at enabling the students to

1. Select and use of suitable measuring and inspection instruments for different geometrical and dimensional measurements.
2. Select and use of suitable Quality Control and statistical quality control techniques

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   | <b>Experiment No.</b> |
|----------------|---|-----------------------|
| <b>CO1</b>     | Use measuring instruments for linear, angular dimensions and surface finish .   | <b>1,2,3</b>          |
| <b>CO2</b>     | Measure dimensions of complex parts such as thread, gear and profile using appropriate measurement systems.   | <b>4,5</b>            |
| <b>CO3</b>     | Analyse process capability of manufacturing processes using statistical quality control techniques.   | <b>6,8</b>            |
| <b>CO4</b>     | Perform risk-based quality assessment and advanced inspection by conducting Failure Mode and Effects Analysis (FMEA) through case studies and practical examples. | <b>7</b>              |
| <b>CO5</b>     | Implement machine vision principles in virtual labs to detect, identify and mitigate, potential failures in manufacturing processes.                              | <b>9</b>              |

**Detailed Syllabus**

| <b>Unit</b>                        | <b>Description</b>   | <b>Duration (Hrs.)</b> |
|------------------------------------|--|------------------------|
| <b>1</b>                           | Demonstration and use of linear and angular measuring instruments, slip gauges and their applications.                   | <b>6</b>               |
| <b>2</b>                           | Demonstration of surface inspection using optical flat and surface roughness measurement using surface roughness tester. | <b>6</b>               |
| <b>3</b>                           | Calibration of measuring instrument, like Pressure gauge, Dial gauge, Micrometer, Vernier Calliper (any one)             | <b>6</b>               |
| <b>4</b>                           | Measurement of complex components such as thread, gear, etc.   | <b>6</b>               |
| <b>5</b>                           | Verification of dimensions and geometry of given components using Mechanical /Pneumatic/Electrical comparator.           | <b>6</b>               |
| <b>6</b>                           | Plot the 7 QC charts by using suitable software/excel.   | <b>6</b>               |
| <b>7</b>                           | Conduct the Failure Mode and Effects Analysis (FMEA) with suitable examples  | <b>6</b>               |
| <b>8</b>                           | Perform the Process Capability Analysis (Cp, Cpk, Pp, Ppk) with suitable examples.                                       | <b>6</b>               |
| <b>9</b>                           | AI integrated Machine vision based quality control. (VLab IIT, Kharagpur OR comparable sources)                          | <b>6</b>               |
| <b>Mandatory Industrial Visit.</b> |  | <b>6</b>               |
| <b>Total</b>                       |  | <b>60</b>              |

**Prior knowledge of:** Engineering Materials, Manufacturing Technology, Strength of Materials, Machine Design is essential.

**Course Objectives:**

This course aims at enabling the students to

1. Design cylinders and pressure vessels using IS code
2. Design machine tool gearbox
3. Design material handling systems.
4. Optimize the mechanical systems.

**Course Outcomes:**

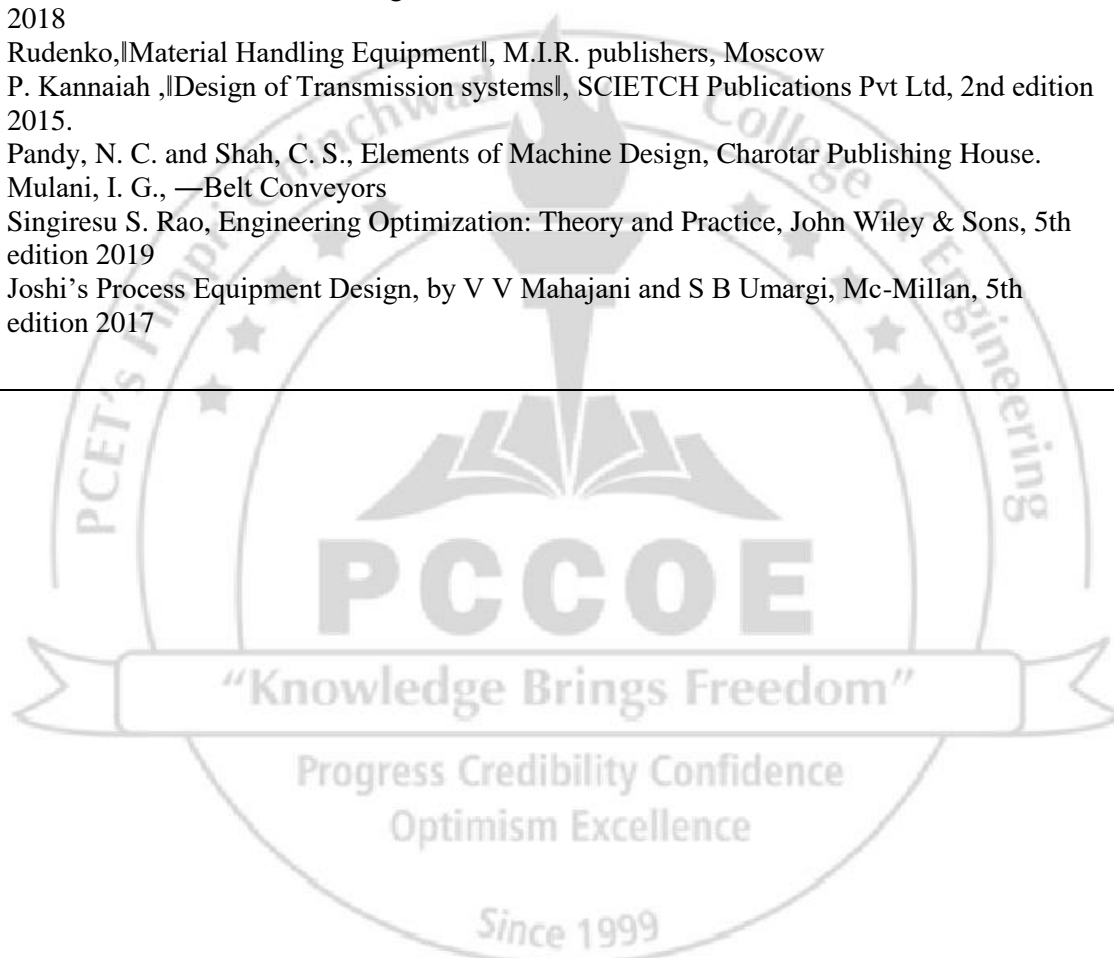

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | <b>Analyze</b> the stress in thin & thick cylinders under internal and external pressure                                    |
| <b>CO2</b>     | <b>Design</b> an unfired pressure vessel using IS 2825:1969 and ASME Code.  |
| <b>CO3</b>     | <b>Determine</b> the optimum kinematic diagram and <b>identify</b> the various speeds in a multi-speed machine tool gearbox |
| <b>CO4</b>     | <b>Select</b> the appropriate material handling equipment for any application and to design the material handling system.   |
| <b>CO5</b>     | <b>Optimize</b> the performance parameters of mechanical systems  |

**Detailed Syllabus**

| <b>Unit</b> | <b>Description</b>   | <b>Duration (Hrs.)</b> |
|-------------|--|------------------------|
| <b>1</b>    | <b>Design of Cylinders</b><br><br>Design of Cylinders: Thin and thick cylinders, Lame's equation, Clavarino's and Bernie's equations, Auto-fretage and compound cylinders.   | <b>09 (CO1)</b>        |
| <b>2</b>    | <b>Design of Unfired Pressure vessel :</b><br><br>Classification of pressure vessels as per IS code 2825-1969, Categories and types of welded joints, Weld joint efficiency, Stresses induced in pressure vessels, materials for pressure vessel, Design of cylindrical shells and end closures as per code, Design of nozzles and openings in pressure vessels, Types of vessel supports.   | <b>09 (CO2)</b>        |
| <b>3</b>    | <b>Machine Tool Gearbox Design</b><br><br>Introduction to machine tool gearboxes, Design and its applications, Basic considerations in design of drives, Determination of variable speed range, graphical representation of speed and structure diagram, ray diagram, selection of optimum ray diagram, gearing diagram, deviation diagram.  | <b>09 (CO3)</b>        |
| <b>4</b>    | <b>Material Handling System Design</b><br><br>System concept, basic principles, Classification of conveyors, Objectives of material handling system, Unit and bulk load.<br>Belt conveyors, Troughed belt conveyors, Capacity of conveyor, Rubber covered and fabric ply belts, belt tensions, Conveyor pulleys, belt idlers, tension take-up systems, Power requirement of belt conveyors for frictional resistance of idler and pulleys. Selection of wires and rope drive from manufacture's catalogue. | <b>09 (CO4)</b>        |

|   |   |                     |
|---|---|---------------------|
| <b>5</b>  | <b>Design Optimization</b>  | <b>09<br/>(CO5)</b> |
|   | Design of Mechanical Elements ,Classification of design parameters-Functional, Geometric and Material .Design Equation .Design of Mechanical Element ,Adequate design, Optimum design ,Johnsons method of optimum design ,AI based decision in Mechanical system design |                     |

**Prior knowledge of:** Engineering Materials, Manufacturing Technology, Strength of Materials, Machine Design is essential

**Course Objectives:**

This course aims at enabling the students to

1. Optimize design and use optimization methods to design mechanical components.
2. Design machine tool gearboxes.
3. Design material handling systems
4. Design cylinders and pressure vessels and to use IS code

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  |
|----------------|--|
| <b>CO1</b>     | <b>Design</b> various mechanical systems like pressure vessels, machine tool gearboxes, and material handling systems for the specifications stated/formulated problem.  |
| <b>CO2</b>     | <b>Prepare</b> structured technical design reports for mechanical systems, documenting problem analysis, design calculations, material selection, cost estimation, and user specifications as per industry standards |

**Detailed Syllabus**

| <b>Expt. No.</b> | <b>Description</b>  | <b>Duration (Hrs.)</b> |
|------------------|---|------------------------|
| <b>1</b>         | <p>A group of 4-5 students will select any One projects out of the following</p> <ol style="list-style-type: none"> <li>1. Design of Material Handling Equipment for industrial application.</li> <li>2. Design of multispeed Gear box for machine tool.</li> <li>3. Design of unfired pressure vessel for industrial application.</li> </ol> <p>The following are the contents of the submission for the design projects.</p> <ol style="list-style-type: none"> <li>i. The detailed <b>design report</b> containing, problem selection, problem analysis, problem definition, Solution based on all applicable design considerations, exclusive summary reflecting final dimensions of parts, Leaflet comprising the final specifications of the product designed, cost, Instructions to the users shall be submitted.</li> <li>ii. <b>2D Part drawing</b> in two views (preferably one sectional view exploring internal features of the parts) with representation of geometric, dimensional tolerances, surface roughness symbols, other instructions such as the surface coating, heat treatments to be submitted</li> <li>iii. <b>2D assembly drawing</b> in two views (preferably one sectional view exploring internal features of the assembly), with representation of overall dimensions, centre distances, dimensions ensuring alignment of parts in assembled condition, locations at which a particular fit is to be achieved, bill of materials representing clearly the OEM parts and parts to be manufactured in-house with correct representation of materials quantity, costing, Warrantee applicable to OEM parts</li> </ol> | <b>30</b>              |
| <b>Total</b>     |   | <b>30</b>              |

**Prior knowledge of:** fundamentals of electrical and electronics, basics of mathematics, mechatronics, basics of simulation and coding using tools like MATLAB is essential

**Course Objectives:**

This course aims at enabling the students to

1. Basics of control systems, mathematical modelling and stability analysis of the control systems.
2. The implementation of various control strategies for the mechanical / electro-mechanical application.
3. Modeling the control systems.

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | <b>Describe</b> the concept and design principles of control systems.                       |
| <b>CO2</b>     | <b>Categorize</b> , identify, and select an appropriate control system for any application. |
| <b>CO3</b>     | <b>Perform</b> system modelling of a control system.  |
| <b>CO4</b>     | <b>Perform</b> stability analysis of a control system                                       |
| <b>CO5</b>     | <b>Develop</b> a controlling strategy for a control system.                                 |
| <b>CO6</b>     | <b>Model</b> the control system using state space methods                                   |

| <b>Detailed Syllabus</b> |   |                        |
|--------------------------|---|------------------------|
| <b>Unit</b>              | <b>Description</b>  | <b>Duration (Hrs.)</b> |
| <b>1</b>                 | <b>Fundamentals of control systems</b><br>Definition, classification, Relative merits and demerits of open-loop and closed-loop control systems, Linear and nonlinear systems, Design principles of control systems, System stability.  | <b>07 (CO1)</b>        |
| <b>2</b>                 | <b>Types of control systems and their applications</b><br>Servo systems, Automatic regulating systems, Process control systems, Adaptive control systems, Learning control systems, Discrete control systems, Multivariable control systems.  | <b>07 (CO2)</b>        |
| <b>3</b>                 | <b>System modelling</b><br>Concept of the transfer function, Block diagram reduction, Signal flow graph: Mason's gain formula, Modelling of mechanical systems, Applications.   | <b>08 (CO3)</b>        |
| <b>4</b>                 | <b>Stability analysis</b><br>Concept of stability analysis, frequency domain analysis, Bode Plot, Root locus technique, Nyquist criterion, Applications.  | <b>06 (CO4)</b>        |

**Prior knowledge of:** Fundamentals of electromechanical systems, Basics of mathematics, Mechatronics, Basics of simulation and coding using tool like MATLAB is essential

**Course Objectives:**

This course aims at enabling the students to

1. Equip with the skills to design, model, and analyze control systems using simulation software, enabling them to apply theoretical concepts to practical scenarios.
2. Develop the ability to design and implement controllers for various mechanical systems, fostering a deep understanding of control theory and its applications in real-world engineering problems.

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  |
|----------------|--|
| <b>CO1</b>     | Design and analyze control systems to optimize response characteristics for specific engineering applications. |
| <b>CO2</b>     | Demonstrate software skills for modelling control systems.   |
| <b>CO3</b>     | Predict the performance and assess the stability of the control system.  |
| <b>CO4</b>     | Apply different control techniques and evaluate their effects on control system characteristics.               |

**Detailed Syllabus**

| <b>Experiment No.</b> | <b><i>From the list below, conduct Compulsory Experiments 1 and 7, Any 1 from Experiments 3 and 4, Any 5 from the remaining list of experiments (Total 8 experiments)</i></b> | <b>Duration (H)</b> |
|-----------------------|---|---------------------|
| <b>1</b>              | Modelling and analysis of a mechanical system using suitable software.  | 02                  |
| <b>2</b>              | Design a mathematical model for a Quarter Car system using Simulink.  | 04                  |
| <b>3</b>              | Modelling and simulation of Anti-Lock Braking System (ABS) using suitable software (Self-study)   | 04                  |
| <b>4</b>              | Modeling and simulation of a Mechanical system using Simscape (Self-study)  | 04                  |
| <b>5</b>              | Stability analysis of a mechanical system using a suitable method   | 04                  |
| <b>6</b>              | Construct the root locus plot in Simulink for a transfer function and observe the effect of changing system parameters on the pole locations.                                 | 04                  |
| <b>7</b>              | Design of a PID controller for any mechanical system using simulation software.   | 04                  |
| <b>8</b>              | Design and analyze a PID Controller for DC Motor.   | 04                  |
| <b>9</b>              | Create an unstable system in Simulink, apply different control strategies to stabilize it, and analyze the stability of the closed-loop system                                | 04                  |
| <b>10</b>             | Compare the open-loop and closed-loop responses of a system in Simulink to understand the impact of feedback on system performance.   | 04                  |
| <b>11</b>             | Modelling and simulation of a DC motor using Python.  | 04                  |
| <b>12</b>             | Implement a machine learning algorithm for predictive control of any system   | 04                  |
| <b>Total</b>          |   | <b>30</b>           |

**Prior knowledge of:** fundamental understanding of: Engineering Materials (Material Science and Metallurgy) Manufacturing Processes (Casting, Forming, Machining). Strength of Materials (Basic mechanical properties) Basic Physics and Chemistry (Atomic structure, bonding, phase transformations) is essential

#### Course Objectives:

This course aims at enabling the students to

1. Provide in-depth knowledge of advanced materials used in modern engineering applications.
2. Develop an understanding of the relationship between material structure, defects, properties, and performance.
3. Familiarize students with different material characterization techniques for microstructural, mechanical, and thermal analysis.
4. Establish foundation to analyse material performance and failure mechanisms.
5. Enhance the ability to select appropriate materials based on application-specific requirements.

#### Course Outcomes:

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  |
|----------------|--|
| <b>CO1</b>     | <b>Explain</b> the significance of advanced materials.   |
| <b>CO2</b>     | <b>Justify</b> the selection of specific advanced material for a given application based on the structure-defect-property relationship.  |
| <b>CO3</b>     | <b>Predict</b> the mechanical behaviour of given sample by <b>analysing</b> its structure, texture and composition by applying fundamentals of material characterization techniques.         |
| <b>CO4</b>     | <b>Select</b> the most suitable material characterization techniques such as spectroscopy, thermal analysis and mechanical testing for specific applications with appropriate justification. |
| <b>CO5</b>     | <b>Analyse</b> material performance and failure mechanisms using characterization data.  |

#### Detailed Syllabus

| <b>Unit</b> | <b>Description</b>   | <b>Duration (Hrs.)</b> |
|-------------|--|------------------------|
| <b>1</b>    | <b>Introduction to Advanced Materials:</b> Definition and importance of advanced materials, Classification, Introduction to the advanced alloys, Ceramics, Polymers, Composites, Smart materials, Nano materials, Biomaterials, and Functionally Graded Materials (FGMs), Self-healing materials, Case Studies on engineering applications.                | <b>09 (CO1)</b>        |
| <b>2</b>    | <b>Structure-defect-property relationship:</b> Types of structures and textures in advanced materials, Defects in materials: Point defects, Line defects, Surface and volume defects, Strengthening mechanisms: grain refinement, solid solution strengthening, precipitation hardening, and Structure-Defect-Property relationship in advanced materials. | <b>09 (CO2)</b>        |
| <b>3</b>    | <b>Material Characterization Techniques– I:</b> Optical Microscopy (OM) and Image Analysis, Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM) and Atomic Force Microscopy (AFM), X-ray Diffraction (XRD), Energy Dispersive Spectroscopy (EDS) and Electron Backscatter Diffraction (EBSD)  | <b>09 (CO3)</b>        |
| <b>4</b>    | <b>Material Characterization Techniques– II:</b> Spectroscopy Techniques: X-ray Fluorescence (XRF), and Fourier Transform Infrared Spectroscopy (FTIR), Thermal Analysis: Differential Scanning Calorimetry (DSC) and Thermo gravimetric Analysis (TGA)  | <b>09 (CO4)</b>        |

|  |   |                     |
|--|---|---------------------|
| <b>5</b>   | <b>Material Performance and Failure Analysis:</b> Wear and corrosion resistance of materials, stress-strain behaviour of advanced materials, High-temperature behaviour of advanced materials, Failure mechanisms: ductile, brittle and mix mode failure, fatigue failure, creep failure, Case studies of engineering failures of advanced materials, Applications of characterization techniques in material failure analysis. | <b>09<br/>(CO5)</b> |
| <b>Total</b>   |   | <b>45</b>           |

**Prior knowledge of:** Fundamental concepts of Thermodynamics, fluid mechanics is essential

### Course Objectives:

This course aims at enabling the students to

1. To familiarize with the construction and working various engine systems
2. To understand the methods of theoretical analysis of I. C. engines
3. To learn the theory of combustion of S. I. and C. I. engines
4. To have understanding of various engine performance parameters and methods of measurement
5. To get familiar with the alternative fuels , pollution form I.C. engine and methods of controlling it

### Course Outcomes:

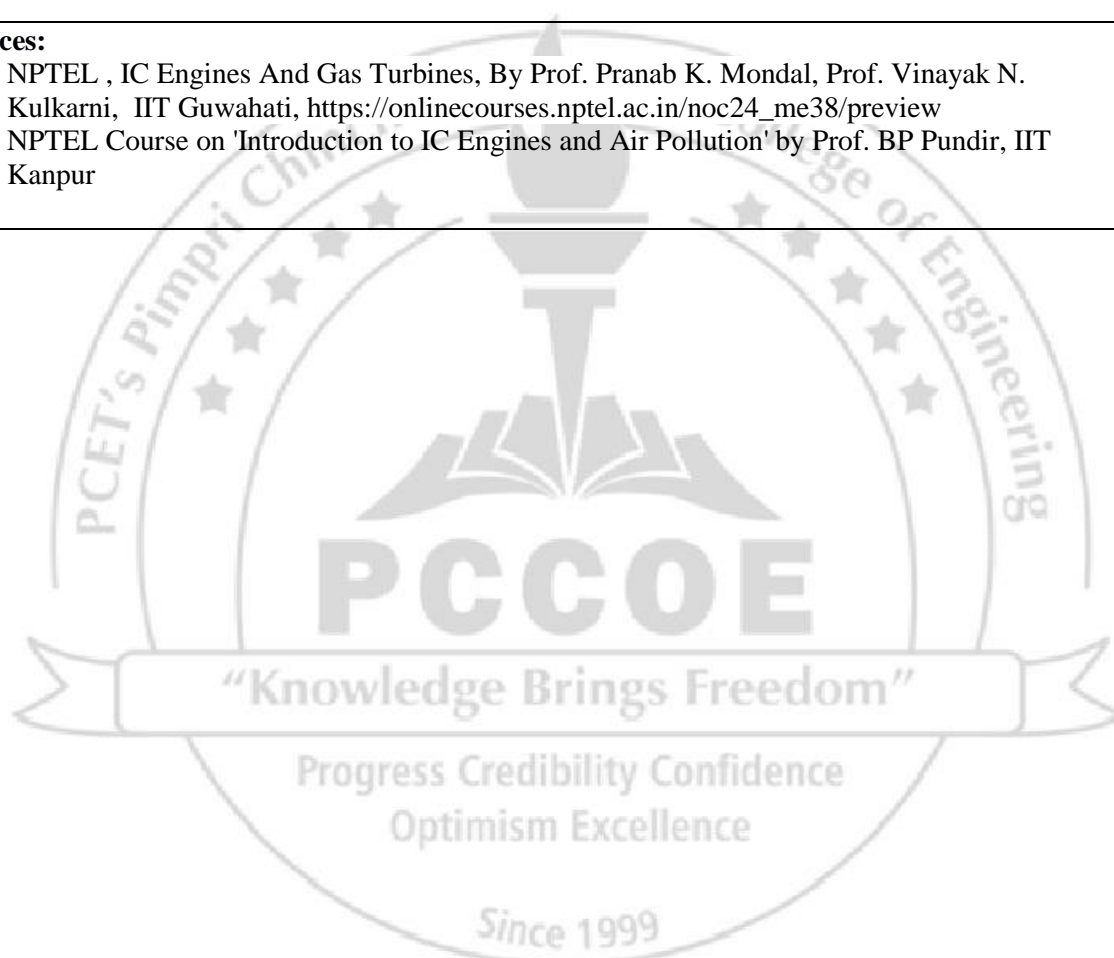

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  |
|----------------|--|
| <b>CO1</b>     | Analyze air standard cycles of I. C. Engines based on various parameters.  |
| <b>CO2</b>     | Analyze Fuel-Air cycles and actual cycles of I. C. Engines based on various parameters.                              |
| <b>CO3</b>     | Analyze the P-theta diagram of S.I. Engine for stages of combustion, rate of pressure rise, abnormal combustion etc. |
| <b>CO4</b>     | Analyze the P-theta diagram of C.I. Engine for stages of combustion, rate of pressure rise, abnormal combustion etc. |
| <b>CO5</b>     | Estimate the performance parameters of I. C. Engines and analyze the characteristics curves.                         |
| <b>CO6</b>     | Compare various alternative fuels based on the desirable properties for I.C. Engines                                 |

### Detailed Syllabus

| <b>Unit</b> | <b>Description</b>  | <b>Duration (Hrs.)</b> |
|-------------|---|------------------------|
| <b>1</b>    | <b>Engine Fundamentals</b><br>Heat Engine, IC and EC engines, Engine classification, I.C. Engine construction - components and materials, Engine nomenclature, Comparison of S.I. & C.I., 4-s and 2-s Engines, P-theta Diagram comparison, Applications. Valve operating system, Valve timing diagram (Theoretical & Actual), Air standard cycles: Otto Cycle, Diesel cycle, Dual cycle and their comparison.   | <b>07 (CO1)</b>        |
| <b>2</b>    | <b>Fuel-air and actual cycles</b><br>Fuel air cycle analysis and its importance, Assumptions and considerations, Effect of variables specific heat, dissociation, Effect of A/F ratio, Comparison with air standard cycle, Comparison of efficiencies of Fuel Air cycle, Air Standard cycle and Actual cycle, various losses in actual cycles, Effect of parameters on losses in actual cycle.  | <b>07 (CO2)</b>        |
| <b>3</b>    | <b>SI Engines:</b><br>Fuel supply system of S. I. Engine: Air Fuel mixture requirements, Simple carburetor, systems of carburetor, Electronic fuel injection system T.B.I, M.P.F.I., G.D.I. System, sensors, actuators and ECU. Combustion in spark Ignition engines, stages of combustion, factors affecting combustion, rate of pressure rise, abnormal combustion: Detonation, Pre-ignition. Combustion chambers of S.I. Engine, Rating of fuels in SI engines, Additives. | <b>08 (CO3)</b>        |
| <b>4</b>    | <b>CI Engines:</b><br>Fuel supply system of C.I. engine, Mechanical Fuel Injection system, Electronic Diesel Injection system. Combustion in compression ignition engines, stages of combustion, factors affecting combustion, Phenomenon of knocking in CI engine. Types of combustion chambers, rating of fuels in CI engines, Dopes & Additives, Comparison of knocking in SI & CI engines, Supercharging and turbo-charging methods and their limitations                 | <b>08 (CO4)</b>        |

|   |  |                           |
|---|--|---------------------------|
| <b>5</b>  | <b>Engine Performance &amp; Testing:</b><br>Engine performance parameters, Methods of determination of various performance parameters, Engine performance characteristic curves, heat balance sheet, Comparison of Engine requirements of ICEV and HEV.  | <b>07</b><br><b>(CO5)</b> |
| <b>6</b>  | <b>Fuels and Emissions Control:</b><br>Important requirements of S.I. & C.I. Engine fuels, Possible alternative fuels: Alcohols, C.N.G., L.P.G., Biodiesel, Hydrogen etc., Air pollution due to IC engine and its effect, Emissions Norms, Sources of emissions, Components of emission, their causes, and Emission control methods for SI and CI engines. | <b>08</b><br><b>(CO6)</b> |
| <b>Total</b>  |  | <b>45</b>                 |
| <b>Text Books:</b> <ol style="list-style-type: none"> <li>1 M.L. Mathur and R.P. Sharma, A course in Internal combustion engines, Dhanpat Rai Publication, New Delhi, 2016</li> <li>2 V. **Prior knowledge of:** Engineering Thermodynamics and Applied Thermal Engineering is essential

**Course Objectives:**

This course aims at enabling the students to

1. Get familiar with various components and sub-systems of an Internal Combustion (IC) engine.
2. Learn various software/programming tools to analyze IC engine
3. Get familiar with various engine test rigs for performance evaluation
4. Study latest emission norms

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>                                       |
|----------------|---|
| <b>CO1</b>     | Identify the components and sub-systems of IC Engines                 |
| <b>CO2</b>     | Analyze IC engine using software tools                                |
| <b>CO3</b>     | Conduct trials on SI/CI Engine to determine performance parameters    |
| <b>CO4</b>     | Interpret the Emission test results as per the latest pollution norms |

**List of Experiments**

| <b>Experiment No</b> | <b>Description:</b><br><b>Note: All experiments are compulsory</b>   | <b>Duration (Hrs.)</b> |
|----------------------|--|------------------------|
| <b>1</b>             | Dismantling and assembly of two stroke/four stroke IC Engine   | 4                      |
| <b>2</b>             | Visit the industry/servicing center to study various I.C. Engine types and their sub-systems                         | 4                      |
| <b>3</b>             | Study of Engines systems and their types: Cooling system, Lubrication system, Ignition system, governing system      | 2                      |
| <b>4</b>             | Comparison of thermal efficiencies of air standard cycle and fuel air cycle using EES / suitable software tools      | 2                      |
| <b>5</b>             | Drive cycle based engine sizing using EES / suitable software tools  | 4                      |
| <b>6</b>             | Variable load test on Single cylinder CI engine to determine thermal efficiency, BSFC, Torque, Volumetric efficiency | 4                      |
| <b>7</b>             | Trial on single cylinder CI engine to calculate heat balance sheet   | 2                      |
| <b>8</b>             | Variable speed test on Multi cylinder S.I. engine to determine various performance parameters                        | 4                      |
| <b>9</b>             | Morse test on Multi cylinder S.I. engine   | 2                      |
| <b>10</b>            | Analysis of exhaust gases of S.I./C.I. Engines aligned with latest emission norms                                    | 2                      |
| <b>Total</b>         |  | <b>30</b>              |

**Prior knowledge of:** Introduction to manufacturing technology or manufacturing processes. of basic concept of welding is essential

**Course Objectives:**

This course aims at enabling the students to

1. To apply metal casting principles, including pattern design, gating, risering, defects, and special casting processes.
2. To analyze bulk forming processes like rolling, forging, and extrusion by determining key process parameters.
3. To evaluate material properties' effects on sheet metal forming, defect identification, and forming techniques.
4. To classify welding processes and assess welding parameters' impact on heat distribution and weldability.
5. To explore powder metallurgy principles, including fabrication, characterization, compaction, and sintering effects.

**Course Outcomes:**

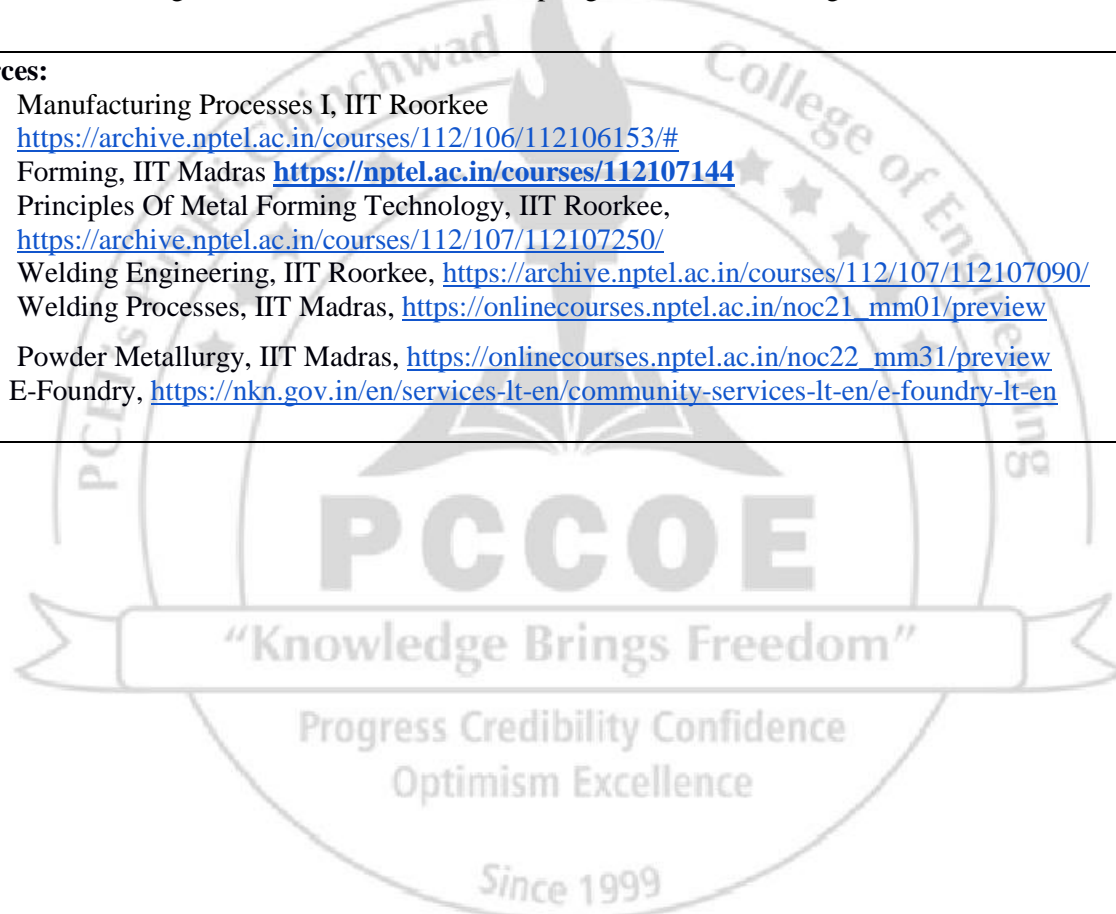

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | <b>Design</b> the gating system for casting.  |
| <b>CO2</b>     | <b>Compare</b> the forming output parameters for given applications.  |
| <b>CO3</b>     | <b>Analyze</b> the effect of material properties on sheet metal formability and understand various sheet metal processes.   |
| <b>CO4</b>     | <b>Apply</b> the principles of various welding, brazing, and soldering processes to analyze heat distribution, heat-affected zone (HAZ), and weldability of different materials.    |
| <b>CO5</b>     | <b>Implement</b> the principles of powder metallurgy to analyze the effects of particle size, shaping, compaction, and sintering on the microstructure and properties of materials. |

| <b>Detailed Syllabus</b> |   |                        |
|--------------------------|---|------------------------|
| <b>Unit</b>              | <b>Description</b>  | <b>Duration (Hrs.)</b> |
| <b>1</b>                 | <b>Metal Casting Processes</b><br>Introduction, Pattern Design, Gating System Design, Riser Design and Placement, Casting cleaning and defects, Special Casting Processes: Shell Moulding, Investment Casting, Die-casting, Centrifugal Casting, Continuous Casting, Squeeze Casting, Automation and smart manufacturing in casting, Sustainability and Eco friendly practices in casting.                                | <b>09 (CO1)</b>        |
| <b>2</b>                 | <b>Bulk Forming Processes</b><br>Rolling: Determination of rolling pressure, roll separating force, torque and power. Forging: Basic steps of Forging, Forging of strip, disc, and determination of forging force. Extrusion: Determination of workload from stress analysis and energy consideration. Drawing: Wire Drawing, Tube Drawing, Determination of drawing force and power, Analysis of deep drawing operation. | <b>09 (CO2)</b>        |
| <b>3</b>                 | <b>Sheet Metal Forming</b><br>Effect of properties on forming and formability, Shearing zone geometry, Sheet metal working processes – blanking, punching, bending, stretch forming, spinning, embossing, trimming, Deep Drawing: Determination of drawing force and power Ideal work and slab analysis; Defects in sheet metal formed products and their causes.   | <b>09 (CO3)</b>        |
| <b>4</b>                 | <b>Welding</b><br>Classification of welding processes, Arc welding processes – SMAW, GMAW, GTAW, plasma arc, submerged arc welding processes; modes of metal transfer in arc welding, Heat flow characteristic, Principles of solid-state welding processes – friction welding, friction  | <b>09 (CO4)</b>        |

|  |   |                           |
|--|---|---------------------------|
|  | stir welding, ultrasonic welding, Effect of welding parameter on heat distribution, heat affected zone (HAZ), factors affecting properties of HAZ, weldability of steel, cast iron and aluminium alloys, Advanced welding techniques.   |                           |
| <b>5</b>   | <b>Powder Metallurgy</b><br>Introduction to Powder Metallurgy, Powder Fabrication, Powder Characterization, Crystalline and Amorphous Structure, Effect of particle size on microstructure, Powder packing, mixing and blending, Shaping and Compaction, Sintering, Post sintering operations, Powder Injection Molding.. | <b>09</b><br><b>(CO5)</b> |
| <b>Total</b>   |   | <b>45</b>                 |

**Prior knowledge of:** basics of manufacturing processes, basic concepts of welding is essential

**Course Objectives:**

This course aims at enabling the students to

1. To develop an understanding of casting, bulk and sheet metal forming processes through simulation and experimental analysis, focusing on material behaviour, and process optimization.
2. To analyze and simulate the welding process using computational tools, studying temperature distribution, residual stresses
3. To study the principles of powder metallurgy by performing powder compaction and sintering, evaluating the effects of process parameters on material properties

**Course Outcomes:**

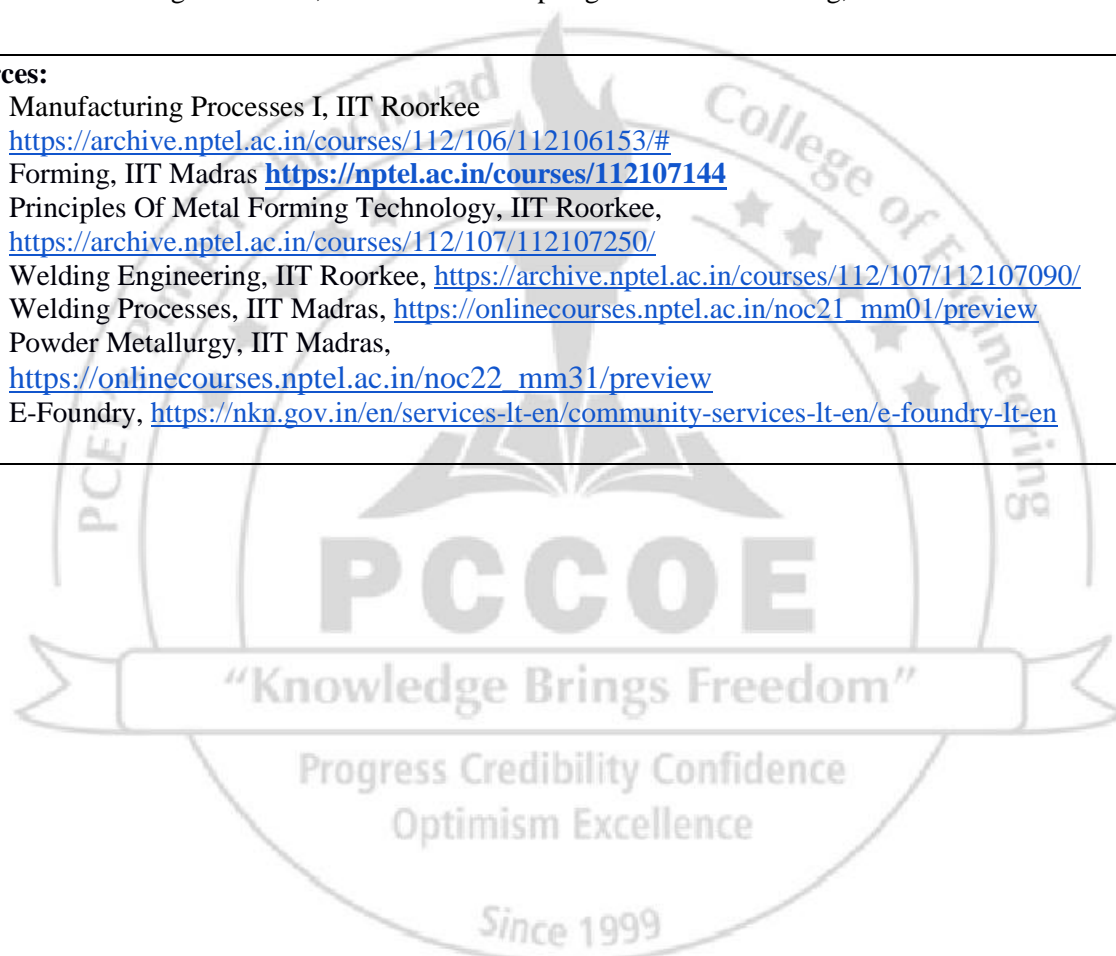

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  | <b>Experiment No.</b> |
|----------------|--|-----------------------|
| <b>CO1</b>     | <b>Evaluate</b> mold filling, solidification time using casting simulation software and validate results through experimental casting. | <b>1,2</b>            |
| <b>CO2</b>     | <b>Analyze</b> the sheet metal forming process using simulation or experimentation to assess material flow and stress distribution     | <b>3</b>              |
| <b>CO3</b>     | <b>Execute</b> press cold forging by performing metal deformation and analyzing process parameters                                     | <b>4</b>              |
| <b>CO4</b>     | <b>Apply</b> computational tools to simulate welding and analyze temperature, stresses, and weld formation                             | <b>5</b>              |
| <b>CO5</b>     | <b>Demonstrate</b> powder metallurgy principles by performing compaction and sintering and analyzing process parameter                 | <b>6</b>              |

**Detailed Syllabus**

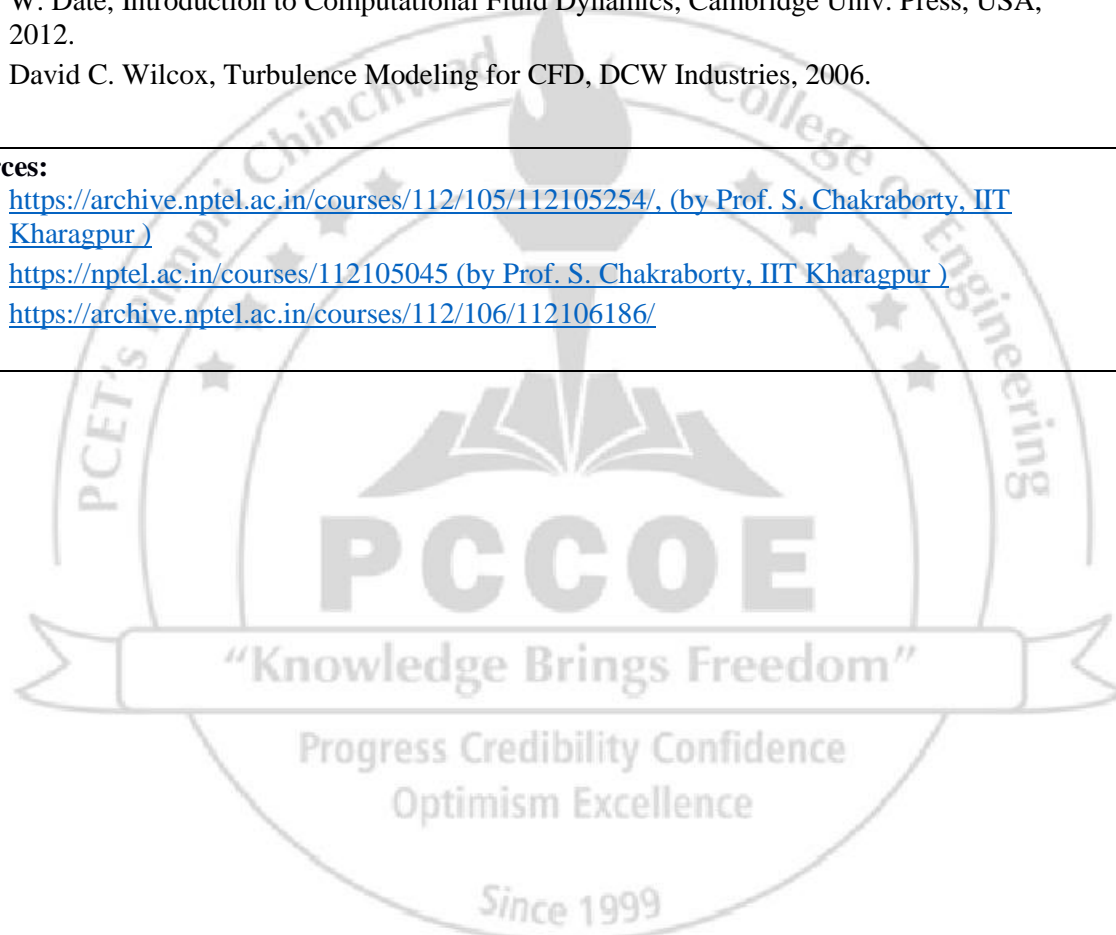

| <b>Experiment No</b> | <b>Description:</b>   | <b>Duration (Hrs.)</b> |
|----------------------|---|------------------------|
| <b>1</b>             | Analyze and understand the casting process by conducting a simulation using suitable software to predict mold filling, solidification, and potential defects and comparing it with AI-Enhanced Simulation   | <b>6</b>               |
| <b>2</b>             | Validate the simulation for the casting process to analyze metal flow, solidification time, and defect formation using computational tools, evaluating the effects of process parameters on casting quality and comparing results through an actual casting experiment. | <b>4</b>               |
| <b>3</b>             | Study the sheet metal forming (stamping) process through simulation or experimental analysis, understanding material flow, stress distribution and defects such as spring back and wrinkling.   | <b>6</b>               |
| <b>4</b>             | Understand the principles of press cold forging by performing metal deformation under compressive forces and analyzing the effects of different process parameters.   | <b>4</b>               |

|                 |  |    |
|-----------------|--|----|
| 5               | Simulate and analyze the welding process using computational tools to study temperature distribution, residual stresses, and weld bead formation.                                    | 6  |
| 6               | Understand the principles of powder metallurgy by performing powder compaction and sintering, analyzing the effects of process parameters on material properties.                    | 4  |
| Total           |  | 30 |

| <b>Prior knowledge of:</b> Engineering Mathematics (Differential Equations, Linear Algebra), Fluid Mechanics, Thermodynamics, Heat Transfer, Programming Languages is essential  |   |                  |                 |              |                          |                         |           |                        |
| <b>Course Objectives:</b><br><br>This course aims at enabling the students to<br>1. To introduce the fundamentals of CFD and its applications in engineering.<br>2. To develop skills in discretization techniques and numerical methods for solving fluid flow problems<br>3. To enable students to model, simulate, and analyze real-world fluid dynamics problems using CFD software. |   |                  |                 |              |                          |                         |           |                        |
| <b>Course Outcomes:</b><br><br>After learning the course, the students will be able to:  |   |                  |                 |              |                          |                         |           |                        |
| <b>Sr. No.</b>   | <b>Course outcome Statement</b>   |                  |                 |              |                          |                         |           |                        |
| <b>CO1</b>   | <b>Explain</b> the importance and applications of CFD, and <b>Describe</b> physical laws and mathematical tools.  |                  |                 |              |                          |                         |           |                        |
| <b>CO2</b>   | <b>Interpret</b> and <b>Classify</b> the governing equations and boundary conditions for fluid flow problems  |                  |                 |              |                          |                         |           |                        |
| <b>CO3</b>   | <b>Apply</b> discretization techniques to convert governing equations into algebraic forms.   |                  |                 |              |                          |                         |           |                        |
| <b>CO4</b>   | <b>Implement</b> numerical methods for convection-diffusion and fluid flow problems, and <b>Analyze</b> their stability and convergence.  |                  |                 |              |                          |                         |           |                        |
| <b>CO5</b>   | <b>Apply</b> appropriate CFD techniques to solve both compressible and incompressible flow problems.  |                  |                 |              |                          |                         |           |                        |
| <b>CO6</b>   | <b>Analyze</b> real-world CFD applications, <b>Evaluate</b> model accuracy, and <b>Identify</b> errors and post-processing techniques.  |                  |                 |              |                          |                         |           |                        |
| <b>Detailed Syllabus</b>   |   |                  |                 |              |                          |                         |           |                        |
| <b>Unit</b>  | <b>Description</b>  |                  |                 |              |                          |                         |           | <b>Duration (Hrs.)</b> |
| <b>1</b>   | <b>Introduction to Computational Fluid Dynamics</b><br>Importance and Applications of CFD; Governing laws: conservation of mass, momentum, and energy; CFD Workflow Essentials; Concept of Substantial Derivative, Divergence & Curl of Velocity; Reynolds transport theorem (RTT). CFD and AI/ML Interface,  |                  |                 |              |                          |                         |           | <b>07 (CO1)</b>        |
| <b>2</b>   | <b>Governing Equations, Boundary Conditions, and Classification of PDEs</b><br>Fundamental Governing Equations for Fluid Flow; Conservative vs. Non-conservative form of the equations; Boundary and Initial Conditions; Classification of Partial Differential Equations: Elliptic, Parabolic, Hyperbolic  |                  |                 |              |                          |                         |           | <b>08 (CO2)</b>        |
| <b>3</b>   | <b>Discretization Techniques</b><br>Introduction to Discretization Methods; Finite Volume Method (FVM): 1-D diffusion equation, Crank-Nicholson scheme; Finite Difference Method (FDM): Forward, Backward, and Central Differencing Schemes. Implicit, and Explicit; Grid Generation and Mesh Quality: Types, Quality Check and Mesh Independency.        |                  |                 |              |                          |                         |           | <b>08 (CO3)</b>        |
| <b>4</b>   | <b>Numerical Methods for Solving Equations</b><br>Finite volume discretization of convection-diffusion problem: convection-diffusion formulation (1D and 2D) using FVM; Solution Techniques for Linear Algebraic Equations, Iterative Methods; Time Marching and Space Marching Techniques; Stability, Consistency, and Convergence of Numerical Methods. |                  |                 |              |                          |                         |           | <b>08 (CO4)</b>        |

|  |  |                     |
|--|--|---------------------|
| <b>5</b>   | <b>CFD Modeling of Flows: Compressible and Incompressible</b><br>Pressure-Velocity Coupling: SIMPLE, SIMPLER, and PISO Algorithms; Turbulence Modeling: Introduction to commonly used turbulence models like RANS, k- $\epsilon$ , and k- $\omega$ Models.                           | <b>07<br/>(CO5)</b> |
| <b>6</b>   | <b>Applications, Validation, and Error Analysis</b><br>CFD applications in heat transfer and fluid flow (internal and external); industrial case studies; verification and validation of CFD models; error sources and grid independence; post-processing and result interpretation. | <b>07<br/>(CO6)</b> |

**Prior knowledge of:** Engineering Mechanics, Manufacturing Science is essential

**Course Objectives:**

This course aims at enabling the students to

1. To provide knowledge on different CAE Tools and CAE analysis.
2. To provide hands-on experience with finite element methods and the skills to analyze engineering problems with commercially available FEA software.

**Course Outcomes:** After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | Apply the various meshing techniques for better evaluation of approximate results.                        |
| <b>CO2</b>     | Apply material properties and boundary conditions.  |
| <b>CO3</b>     | Solve engineering problems using FEA software and generate the results as a contour plot using CAE tools. |

**Detailed Syllabus**

| <b>Experiment No</b> | <b>Description:</b>   | <b>Duration (Hrs.)</b> |
|----------------------|---|------------------------|
| <b>1</b>             | Introduction to Computer-Aided Engineering (CAE) <ul style="list-style-type: none"> <li>• Use of CAE in Product development and its applications to engineering problems</li> <li>• Discretization method commonly used (FEM) for CAE.</li> <li>• Use of application software and different available software</li> <li>• CAE Tools- Pre-processor, Solver and Post-Processor.</li> <li>• Nodal unknowns and shape function (Quadratic function)</li> <li>• Meshing Techniques</li> <li>• Introduction to Ansys UI</li> </ul> | <b>2</b>               |
| <b>2</b>             | 1D Element – Structural Linear Analysis for 1D bar and Beam (Mesh Convergence), Validation of results using matrix method   | <b>4</b>               |
| <b>3</b>             | Truss Analysis using 1D Element (Mesh Convergence), Validation of results using matrix method / solid mechanics method  | <b>4</b>               |
| <b>4</b>             | Analysis of a Plate with a hole, and calculation of the stress concentration factor   | <b>4</b>               |
| <b>5</b>             | Modal Analysis of any 1D and 3D component (Mesh Convergence), Validation of results (1D) using the eigenvalue method  | <b>4</b>               |
| <b>6</b>             | Transient Structural Analysis (Mesh Convergence)  | <b>4</b>               |
| <b>7</b>             | Analysis of any Machine Component using 3D Elements   | <b>4</b>               |
| <b>8</b>             | Mini project/case study based on a research paper and presentation (group activity) <ul style="list-style-type: none"> <li>• Static / Dynamic Analysis of components in the published paper</li> <li>• Match the contour plots of results with actual and published data</li> <li>• Prepare the presentation</li> </ul>   | <b>4</b>               |
| <b>Total</b>         |   | <b>30</b>              |

| <b>Prior knowledge of:</b> Fundamental concepts and laws/governing equations of physics and Mathematics, Fundamental concepts and laws/governing equations of Fluid Mechanics, thermodynamics, fluid machines is essential |  |                  |                 |              |                          |           |                         |                        |
| <b>Course Objectives:</b> This course aims at enabling the students to   |  |                  |                 |              |                          |           |                         |                        |
| 1. To experimentally verify the governing principle of Fluid machinery.  |  |                  |                 |              |                          |           |                         |                        |
| 2. To learn to conduct trials on various machineries like water turbine, pumps, compressors, steam turbine   |  |                  |                 |              |                          |           |                         |                        |
| 3. To learn to evaluate and analyze the performance of equipment water turbine, pumps, compressors, steam turbine  |  |                  |                 |              |                          |           |                         |                        |
| 4. To understand operation, monitoring, controlling and troubleshooting of hydro/steam/gas turbine power plants /pumping station/water treatment plant and sewage plant.   |  |                  |                 |              |                          |           |                         |                        |
| <b>Course Outcomes:</b> After learning the course, the students will be able to:   |  |                  |                 |              |                          |           |                         |                        |
| <b>Sr. No.</b>   | <b>Course outcome Statement</b>  |                  |                 |              |                          |           |                         |                        |
| <b>CO1</b>   | Verify the impulse momentum principle.   |                  |                 |              |                          |           |                         |                        |
| <b>CO2</b>   | Estimate the performance of various turbines.  |                  |                 |              |                          |           |                         |                        |
| <b>CO3</b>   | Evaluate the performance of centrifugal pump and compressor.   |                  |                 |              |                          |           |                         |                        |
| <b>CO4</b>   | Demonstrate the operation, monitoring, controlling and troubleshooting of turbo machines   |                  |                 |              |                          |           |                         |                        |
| <b>List of experiments</b>   |  |                  |                 |              |                          |           |                         |                        |
| <b>Experiment No</b>   | <b>Description:</b><br><b>Note: Experiment no. 1 to 6 and 9 are compulsory. Perform any 2 from the remaining experiments.</b>                              |                  |                 |              |                          |           |                         | <b>Duration (Hrs.)</b> |
| <b>1</b>   | Verification of Impulse Momentum Principle   |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>2</b>   | Study and trial on Impulse water turbine( Pelton Wheel Turbine) and plotting of performance characteristics curves   |                  |                 |              |                          |           |                         | <b>4</b>               |
| <b>3</b>   | Study and trial on Reaction water turbine(Francis Turbine) and plotting of performance characteristics curves  |                  |                 |              |                          |           |                         | <b>4</b>               |
| <b>4</b>   | Study and trial on Steam turbine and estimation of performance parameters.   |                  |                 |              |                          |           |                         | <b>4</b>               |
| <b>5</b>   | Study and trial on Centrifugal Pump and plotting of performance characteristics curves   |                  |                 |              |                          |           |                         | <b>4</b>               |
| <b>6</b>   | Study and trial on Centrifugal fan/blower/compressor and plotting of performance characteristics curves  |                  |                 |              |                          |           |                         | <b>4</b>               |
| <b>7</b>   | Study and trial on convergent divergent water/steam/gas nozzle   |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>8</b>   | Visit to pumping station/water treatment plant/sewage treatment Plant and preparation of report on operation, monitoring, controlling and troubleshooting. |                  |                 |              |                          |           |                         | <b>2</b>               |
| <b>9</b>   | Visit to hydro/steam /Gas turbine power plant and preparation of report on operation, monitoring, controlling and troubleshooting.                         |                  |                 |              |                          |           |                         | <b>9</b>               |
| <b>10</b>  | Design of pumping system   |                  |                 |              |                          |           |                         | <b>2</b>               |

**Prior knowledge of:** basic manufacturing processes, basic mechanical components is essential

**Course Objectives:** This course aims at enabling the students to

1. To introduce the concepts, principles and framework of contents of Industrial Engineering.
2. To acquaint the students with various productivity enhancement techniques.
3. To acquaint the students with different aspects of Production Planning and Control and Facility Design.
4. To introduce the concepts of various cost accounting and financial management practices as applied in industries.
5. To acquaint the students with different aspects of Human Resource activities and Industrial Safety rules.

**Course Outcomes:** After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | Apply principles of management and evaluate productivity of an organization/Scenario.   |
| <b>CO2</b>     | Apply different steps in method study/use different Recording methods to an operation.  |
| <b>CO3</b>     | Determine work content and standard time using different methods of work measurement including developing an understanding of Rating. |
| <b>CO4</b>     | Apply/use different techniques / concepts of production planning and control.   |
| <b>CO5</b>     | Apply different techniques / concepts of work system design and facilities design pertinent to manufacturing industry.                |
| <b>CO6</b>     | Perform break-even analysis for investment decisions.   |

#### Detailed Syllabus

| <b>Unit</b> | <b>Description</b>  | <b>Duration (H)</b> |
|-------------|---|---------------------|
| <b>1</b>    | <b>Introduction to Industrial Engineering and Productivity</b><br>Definition and Role of Industrial Engineering, Functions of management, Types of production systems and organization structure. Measurement of productivity: Factors affecting the productivity, Productivity improvement techniques, Productivity Models and Index. Introduction to Value Engineering and Value Analysis.  | <b>07 (CO1)</b>     |
| <b>2</b>    | <b>Method Study</b><br>Work Study: Definition, objective and scope of work-study, Human factors in work-study. Method Study: Definition, objective and scope of method study, work content, activity recording and exam aids, micro motion study. Applied Anthropometry, Work-Space Design, and Seating.  | <b>08 (CO2)</b>     |
| <b>3</b>    | <b>Work Measurements</b><br>Work Measurements: Definition, objectives and uses, Work measurement techniques. Work Sampling: Need, confidence levels, sample size determinations, random observation, conducting study with the simple problems. Time Study: Definition, time study equipment, selection of job, steps in time study. Breaking jobs into elements, recording information, Rating and standard rating, standard performance, scales of rating, allowances and standard time determination. Introduction to PMTS and MTM: (Numerical), Introduction to MOST. | <b>07 (CO3)</b>     |
| <b>4</b>    | <b>Production Planning and Control</b><br>Introduction: Types of production systems, Need and functions of PPC, Aggregate production planning. Capacity Planning, ERP: Modules, Master Production Schedule, MRP and MRP-II. Forecasting Techniques: Causal and time series models, moving average, exponential smoothing, trend and seasonality (Numerical), Demand Control strategies (MTO, MTA, MTS). Introduction to Supply Chain Management: Basic terminologies. Role of Artificial Intelligence (AI) in Optimized Resource Allocation and Scheduling.               | <b>08 (CO4)</b>     |

|  |   |                     |
|--|---|---------------------|
| <b>5</b>   | <b>Plant Location and Inventory Management</b><br>Plant Location: Need and factors influencing plant location, Plant Layout: Objectives, principles, types of plant layouts, Introduction to Assembly Line Balancing and Layout parameters to evaluate.<br>Inventory control and Management: Types of inventories, Need of inventories, terminology, costs, Inventory Models: Basic production models, (with and without shortage and discount), ABC, VED Analysis.<br>Role of Artificial Intelligence (AI) in Predictive Maintenance, Real-time Monitoring and Optimization. | <b>07<br/>(CO5)</b> |
| <b>6</b>   | <b>Costing and Human Factor in Industrial Engineering</b><br>Introduction to Marginal Costing: Elements of Cost, Break-Even Analysis.<br>Techniques for Evaluation of capital investments.<br>Human factors: Introduction to computer aided ergonomic analysis of workstation. Assessment of postures and identification of risks to body regions. Human Error, Accidents, and Safety, Human relation in industry, Performance appraisal, Human Factors in Systems Design.  | <b>08<br/>(CO6)</b> |
| <b>Total</b>   |   | <b>45</b>           |

**Prior knowledge of:** basic manufacturing processes, basic mechanical components is essential

**Course Objectives:**

This course aims at enabling the students to

1. To understand and apply the method study approach and work measurement techniques to analyze motions and time components involved in machining operations of a given job.
2. To develop detailed process plans, prepare motion charts, and design plant layouts for manufacturing operations, using standard symbols, CAD software, and simulation tools.

**Course Outcomes:**

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>  | <b>Experiment No.</b> |
|----------------|--|-----------------------|
| <b>CO1</b>     | Conduct motion and time analysis of machining operations using method study and work measurement techniques, identifying and eliminating inefficiencies.                 | <b>1,2</b>            |
| <b>CO2</b>     | Prepare comprehensive process plans and sequence of operation charts for the manufacturing of various components, ensuring systematic and efficient production planning. | <b>3,4</b>            |
| <b>CO3</b>     | Create detailed motion charts using standard therblig symbols to visually represent and analyze activities, aiding in process optimization.                              | <b>5,</b>             |
| <b>CO4</b>     | Design and simulate efficient plant layouts using simulation software, optimizing the arrangement of facilities and resources for improved production flow.              | <b>6,7,8</b>          |

**Detailed Syllabus**

| <b>Experiment No</b> | <b>Description:</b>   | <b>Duration (Hrs.)</b> |
|----------------------|---|------------------------|
| <b>1</b>             | Apply method study approach to analyze the motions involved in machining operation of the given job.  | <b>4</b>               |
| <b>2</b>             | Apply work measurement technique to analyze the time components involved in machining operation of given job using stop watch. Calculate standard time for all the operations involved. | <b>4</b>               |
| <b>3</b>             | Prepare motion chart of given activity using standard symbols of therbligs.   | <b>4</b>               |
| <b>4</b>             | Prepare supply chain chart in day-to-day situation like supply of Cold drink/tooth paste/any grocery item/online purchase of goods/products.  | <b>4</b>               |
| <b>5</b>             | Prepare detailed process plan/Sequence of operation chart for manufacturing of Hexagonal Nut/Hexagonal headed bolt/Stud/Wing Nut/Plain Washer.  | <b>4</b>               |
| <b>6</b>             | Assembly line balancing, scheduling using any software.   | <b>4</b>               |
| <b>7</b>             | Design the plant layout by using simulation software like Flexsim or any other open source.   | <b>4</b>               |
| <b>8</b>             | Application of AI based tools for forecasting, planning, scheduling.  | <b>2</b>               |
| <b>Total</b>         |   | <b>30</b>              |
| <b>Text Books</b>    |   |                        |

**Prior knowledge of:** Solution of Matrices, Kinematics of Mechanisms, Force analysis of Mechanism, Mechatronics is essential

#### Course Objectives:

This course aims at enabling the students to

1. Classification of robots and homogeneous transformation of matrices.
2. Represent the robot in matrix form and perform Direct and Inverse kinematics.
3. Velocity, static force and dynamics analysis of the robot.
4. Generation of the required trajectory.
5. Identify the required robot programming.
6. Program the Robot for a given motion

#### Course Outcomes:

After learning the course, the students will be able to:

| <b>Sr. No.</b> | <b>Course outcome Statement</b>   |
|----------------|---|
| <b>CO1</b>     | <b>Classify</b> robots according to their application, and <b>Solve</b> homogeneous transformations for robot frame manipulation. |
| <b>CO2</b>     | <b>Determine</b> the DH parameters of a robot and <b>Analyze</b> the forward and inverse kinematics of it.                        |
| <b>CO3</b>     | <b>Analyze</b> the Velocity, Static Force, and Dynamics of a robot.   |
| <b>CO4</b>     | <b>Generate</b> a trajectory for robot for a given path.  |
| <b>CO5</b>     | <b>Describe</b> various types of programming methods used in robots.  |
| <b>CO6</b>     | <b>Develop</b> a program that solves a specific problem, <b>demonstrating</b> the application of programming principles.          |

#### Detailed Syllabus

| <b>Unit</b>  | <b>Description</b>   | <b>Duration (Hrs.)</b> |
|--------------|--|------------------------|
| <b>1</b>     | <b>Fundamentals of robotics</b><br>Structure of a robot. Classification and applications of robots. Robot anatomy. Configurations of robots, work envelope, Dexterity and compliance of robots. Description of the frame in the robotic system. Homogeneous transformations and mapping of frames. | <b>07</b>              |
| <b>2</b>     | <b>Manipulator kinematics</b><br>Representation of joints and links using Denavit- Hartenberg parameters. Forward and Inverse kinematics of robots.  | <b>08</b>              |
| <b>3</b>     | <b>Velocity, static force, and Dynamics</b><br>Linear and angular velocity of links, velocity propagation, manipulator Jacobians, manipulability, and singularity analysis. Static forces in manipulators. Introduction to Robot Dynamics.   | <b>07</b>              |
| <b>4</b>     | <b>Trajectory generation</b><br>Considerations in path description, Joint space schemes, and Cartesian space schemes. Geometric problems in the generated paths.   | <b>08</b>              |
| <b>5</b>     | <b>Basics of Robot Programming</b><br>Robot task planning, Robot programming methods, Robot programming languages and their requirements, Motion interpolation, motion & task level languages, robot language classifications and structures, Robot Safety.  | <b>07</b>              |
| <b>6</b>     | <b>Robot Language: VAL</b><br>VAL language commands, motion control, hand control, program control, pick and place application, palletizing application, welding application.  | <b>08</b>              |
| <b>Total</b> |  | <b>45</b>              |

| <b>Prior knowledge of:</b> Fundamental knowledge of Engineering Thermodynamics, Fluid Mechanics, and Strength of Materials, Basics of Numerical Methods and Engineering Mathematics, Hands on experience on commercial design software like AutoCAD, PRO-E, CATIA, etc. is essential   |  |                  |                 |              |                          |                         |           |                        |
| <b>Course Objectives:</b><br><br>This course aims at enabling the students to<br>1. To develop simulation skills using modern CAE tools, focusing on pre-processing, solving, and post-processing workflows.<br>2. To engage students in analyzing and interpreting fluid-thermal-structural interactions in mechanical systems.   |  |                  |                 |              |                          |                         |           |                        |
| <b>Course Outcomes:</b><br><br>After learning the course, the students will be able to:  |  |                  |                 |              |                          |                         |           |                        |
| <b>Sr. No.</b>   | <b>Course outcome Statement</b>  |                  |                 |              |                          |                         |           |                        |
| <b>CO1</b>   | Use appropriate CAE tools to simulate thermo-fluid and structural engineering problems involving FEA and CFD.        |                  |                 |              |                          |                         |           |                        |
| <b>CO2</b>   | Analyze simulation results to interpret thermal, fluid, and structural responses in real-world multi physics systems |                  |                 |              |                          |                         |           |                        |
| <b>Detailed Syllabus</b>   |  |                  |                 |              |                          |                         |           |                        |
| <b>Experiment No</b>   | <b>List of Experiments:</b><br><b>Note: Experiment 1, 2, and 3 are compulsory and any four from Remaining</b>        |                  |                 |              |                          |                         |           | <b>Duration (Hrs.)</b> |
| <b>1</b>   | Introduction to CAE & Multi physics Applications (Overview of FEA + CFD integration)                                 |                  |                 |              |                          |                         |           | <b>2</b>               |
| <b>2</b>   | Geometry Clean-up & Meshing for CFD/FEA  |                  |                 |              |                          |                         |           | <b>2</b>               |
| <b>3</b>   | Basics of Fluid-Structure Interaction (FSI) (Coupled physics understanding)  |                  |                 |              |                          |                         |           | <b>2</b>               |
| <b>4</b>   | Thermal Stress Analysis of Heat Exchanger (FEA + thermal analysis)   |                  |                 |              |                          |                         |           | <b>6</b>               |
| <b>5</b>   | Heat Sink with Conjugate Heat Transfer (CFD + heat transfer + thermal stress)  |                  |                 |              |                          |                         |           | <b>6</b>               |
| <b>6</b>   | Brake Disc Simulation: Thermal & Structural (Transient thermal stress)   |                  |                 |              |                          |                         |           | <b>6</b>               |
| <b>7</b>   | Wind Load on Signboard / Panel (CFD wind force → Structural stress)  |                  |                 |              |                          |                         |           | <b>6</b>               |
| <b>8</b>   | Solar Panel Mount with Natural Convection (CFD + Thermal expansion)  |                  |                 |              |                          |                         |           | <b>6</b>               |
| <b>9</b>   | Piping System: Flow + Structural Loading (Internal flow + Stress)  |                  |                 |              |                          |                         |           | <b>6</b>               |
| <b>10</b>  | FSI Analysis of a Wing (CFD+ FEA)  |                  |                 |              |                          |                         |           | <b>6</b>               |
| <b>11</b>  | Drone Arm Simulation under Rotor Thrust (CFD lift + FEA bending)   |                  |                 |              |                          |                         |           | <b>6</b>               |
| <b>Total</b>   |  |                  |                 |              |                          |                         | <b>30</b> |                        |

## VISION

**To be the department of sustainable academic excellence, fostering innovation, skill development, and work ethics leading to globally competent mechanical engineers.**

जागतिक स्तरावर सक्षम यांत्रिक अभियंत्यांना मार्गदर्शन करणारा नावीन्य, कौशल्य विकास आणि कामाच्या नैतिकतेला चालना देणारा शाश्वत शैक्षणिक उत्कृष्टतेचा विभाग बनणे.

## MISSION

- 1. Nurture cohesive learning environment and develop matching ecosystem.**

एकसंध शिक्षण वातावरण जोपासणे आणि जुळणारी परिसंस्था विकसित करणे.

- 2. Cultivate excellent work ethics and right attitude among students by imparting essential skills and knowledge.**

आवश्यक कौशल्ये आणि ज्ञान देऊन विद्यार्थ्यांमध्ये उत्कृष्ट कार्य नैतिकता आणि योग्य दृष्टिकोन विकसित करणे.

- 3. Instill a sense of creativity, social responsibility and environmental awareness among students.**

विद्यार्थ्यांमध्ये सर्जनशीलता, सामाजिक जबाबदारी, आणि पर्यावरण विषयक जागरुकता निर्माण करणे.

## **Program Educational Objectives**

- 1. Conceptualize, design, model, simulate, and analyze mechanical components, systems and processes in complex interdisciplinary applications.**
- 2. Develop sustainable solutions to real-life mechanical engineering problems in products and process industries.**
- 3. To practice professional codes and conducts, safety norms, industrial engineering and management principles while working in the industry or as an entrepreneur.**

## **Program Specific Outcomes**

- 1. To cultivate knowledge and skills in formulating, analyzing, and solving interdisciplinary engineering problems among the mechanical engineering graduates.**
- 2. To inculcate right attitude and awareness about codes of professional practice, social commitment, and life-long learning among the mechanical engineering graduates.**
- 3. To enhance professional competence for catering to the needs and expectations of society as a profound Mechanical Engineer.**
